CITY OF BREA
NOTICE OF PREPARATION
of a DRAFT ENVIRONMENTAL IMPACT REPORT for the BREA PLAZA HOTEL AND APARTMENTS EXPANSION PROJECT and NOTICE OF SCOPING MEETING

Date:	July 27, 2020
Subject:	Notice of Preparation (NOP) and Scoping Meeting for the Brea Plaza Hotel and Apartments Expansion Project Draft Environmental Impact Report
To:	State Clearinghouse, State Responsible Agencies, State Trustee Agencies, Other Public Agencies, Interested Organizations
Lead Agency/Sponsor:	City of Brea, Planning Division
Project Title:	Brea Plaza Hotel and Apartments Expansion Project

NOTICE IS HEREBY GIVEN that the City of Brea will prepare an environmental impact report (EIR) for the Brea Plaza Hotel and Apartments Expansion Project. The City is the lead agency for the project. The purpose of this notice is to (1) serve as a Notice of Preparation of an EIR pursuant to the California Environmental Quality Act (CEQA) Guidelines § 15082, (2) advise and solicit comments and suggestions regarding the scope and content of the EIR to be prepared for the project, and (3) notice the public scoping meeting.

NOTICE OF PREPARATION: The City of Brea, as Lead Agency, requests that responsible and trustee agencies respond in a manner consistent with § 15082(b) of the CEQA Guidelines. Pursuant to CEQA § 21080.4, responsible agencies must submit any comments in response to this notice no later than 30 days after receipt. The public review period will commence on **Monday, July 27, 2020**, and will close on **Wednesday, August 26, 2020**. A copy of the NOP can be viewed electronically on the City's webpage at: www.cityofbrea.net/projectsinprocess

WRITTEN COMMENTS: We ask that any person wishing to comment on the NOP provide written comments by the end of the public review period **at 5:00 p.m., Wednesday, August 26, 2020**, addressed to Sheri Vander Dussen, Contract Planner, City of Brea – Planning Division, at sheri.vanderdussen@kimley-horn.com, or by mail to the City of Brea, Planning Division Level 3, 1 Civic Center Circle, Brea, CA 92821.

PUBLIC SCOPING MEETING: The City will hold a scoping meeting in conjunction with this NOP in order to present the project and the EIR process, and to provide an opportunity for agency representatives and the public to assist the lead agency in determining the scope and content of the environmental analysis for the EIR. As a result of the expanding outbreak of COVID-19 and restrictions placed on in-person gatherings throughout the State of California under Executive Order N-29-20, the City will host an online public meeting to receive public comments on the scope of the EIR, rather than an in-person event. **The online public meeting will be hosted on the evening of Wednesday, August 12, 2020, at 6:30 PM** and conducted via a live Zoom meeting. In order to participate in the scoping meeting, please email your full name and physical address to sheri.vanderdussen@kimley-horn.com by 5 PM on Wednesday, August 12, 2020 to obtain the Zoom meeting invite. The scoping meeting will begin with a presentation at 6:30 PM and will be followed by questions from the public.

PROPERTY LOCATION: As shown on Figure 1, *Aerial Photograph*, and Figure 2, *Regional Location*, The Brea Plaza Shopping Center—1639 East Imperial Highway—encompasses approximately 16 acres in the City of Brea. The Brea Plaza Shopping Center is east of State Route 57 (SR-57) and is generally bounded by the Mercury Insurance office development to the north, South Associated Road and a single-family residential neighborhood to the east, Imperial Highway/SR-90, and commercial development in the City of Fullerton to the south, and SR-57 to the west.

EXISTING CONDITIONS: Based on a review of historical aerial photographs, the Brea Plaza Shopping Center began operations in the early 1980s. The Brea Plaza Shopping Center is developed with 165,329 square feet of commercial space and includes a mix of tenants, including Mothers Market (north side), Buca di Beppo (west side), Lucille's Smokehouse Bar-B-Que (south side), Chick-fil-A (south side), Friar Tux (northeast side), Total Wine and More (west side), Custom Comfort Mattress (northwest side), Grand Salon (west side), and Brea Plaza 5 Cinemas (northwest side). There are 725 parking spaces within the Brea Plaza Shopping Center. Additionally, the applicant has an easement with Mercury Insurance for approximately 180 spaces during business hours, an all surface spaces (approximately 500 spaces) after 5 pm and on weekends. Vehicular access to Brea Plaza Shopping Center is provided via a right-turn only and a full access driveway on Associated Road, and a right-turn only on Imperial Highway plus the signalized intersection of Imperial Highway at SR-57 northbound (NB) ramps/Brea Plaza.

PROJECT DESCRIPTION: The proposed project would require the demolition of the 18,450-square-foot- Brea Plaza 5 Cinemas (1,110 seats), the 7,500-square-foot Buca di Beppo, and 149 surface parking spaces, and subsequent development of an L-shaped building on approximately 3.8 acres in the northwestern portion of the 16-acre Brea Plaza Shopping Center to accommodate the proposed hotel, residential, restaurant, and office uses, and parking. Table 1, *Brea Plaza Hotel and Apartments Expansion Project Land Use Summary,* identifies the existing and proposed improvements. The proposed project would result in a net increase of 150 hotel rooms, 194 residential units, 198 parking spaces, and a reduction of 3,068 commercial square feet on the 3.8-acre portion of the 16-acre site. Figure 3, *Conceptual Site Plan,* shows the overall conceptual site plan, including office, residential, hotel, and restaurant uses, and parking. Figure 4, *Conceptual Mixed-Use Building Cross Section,* shows the conceptual building cross-sections, with their respective square footages, in relation to the existing commercial uses onsite. The proposed project would require a general plan amendment (GPA), a zone change from General Commercial (C-G) to Mixed Use II; the applicant would submit a request for a development agreement (DA).

POTENTIAL SIGNIFICANT EFFECTS: As authorized by the State CEQA Guidelines, based on preliminary review, the City determined that it would prepare an EIR for the proposed project, and therefore, it is beginning work directly on the EIR process and will focus on potentially significant effects of the proposed project in that EIR, while briefly indicating the reasons that other effects will not be potentially significant. An Initial Study is not required to determine that an EIR will be prepared and is therefore not attached. The City EIR will discuss potential environmental impacts of the proposed project, including potential pre-construction, construction, and operations impacts. The DEIR will analyze potential environmental effects of the proposed project, including: Air Quality, Cultural Resources, Greenhouse Gas Emissions, Land Use and Planning, Population and Housing, Noise, Transportation, and Tribal Cultural Resources. The project site is not on a list compiled pursuant to Government Code section 65962.5.

Table 1 Brea Plaza Hotel and Apartments Expansion Project Land Use Summary

Tenant	Existing (SQFT.)	Demolition (SQFT)	New Construction		Total Site	
			Units or Rooms	SQFT	Units or Rooms	SQFT
Residential						
Residential[1]	—	—	194[2]	229,855	194	229,855
Hotel						
Hotel	—	—	150	92,538	150	92,538
Commercial						
Office	—	—	—	17,863	—	17,863
Medical Office	1,596	—	—	—	—	1,596
Restaurants[1]	42,649	7,500	—	5,019	—	40,168
1,100 Seat Movie Theater	18,450	18,450	—	—	—	0
Grocery Store	16,206	—	—	—	—	16,206
Retail	68,415	—	—	—	—	68,415
Liquor Store	18,013	—	—	—	—	18,013
Subtotal Commercial	165,329	25,950	—	22,882	—	162,261
Parking						
3-Level Parking Structure (BG, L1, L2)	—	—	347 spaces	342,275	347 spaces	342,275
Surface Parking	725[4]	149 spaces	347 spaces	NA	198 spaces	NA
Total[3]	**165,329**	**25,950**	**150 rooms 194 units**	**345,275**	**150 rooms 194 units**	**484,654**
Net Change[3]	**150 hotel rooms; 194 residential units; -3,068 Commercial SQFT; 198 parking spaces**					

Notes: SQFT = square footage; BG = below ground; L1 = Level 1, L2 = Level 2

[1] The residential building includes 3,000 square feet of self-storage space for the exclusive use of the residences.

[2] Co-living bedrooms are not counted as individual apartments. If the co-living unit bedrooms were counted as individual units, then the total apartment count goes to 220.

[3] The total square footage includes the square footage of the hotel and residential building, but excludes the parking structure. The 'net changed' total includes only the commercial component since the residential component is reflected as rooms and the hotel component is reflected as square feet.

[4] There are a total of 725 stalls on the 16-acre site plus an additional 180 spaces during business hours and all surface spaces after 5 PM and weekend (roughly 500) though an easement with Mercury Insurance.

Subject: Re: Notice of Preparation (NOP) and Scoping Meeting for the Brea Plaza Hotel and Apartments Expansion Project Draft Environmental Impact Report

Good Afternoon,

I am writing on behalf of the Juaneno Band of Mission Indians, Acjachemen Nation- Belardes in response to a July 27th NOP of an Environmental Impact Report for the Brea Plaza Hotel and Apartments Expansion Project. We wish to consult on this project and look forward to reviewing the DEIR when it becomes available. Can you please provide information regarding the following:

- When was the initial structure slated for demolition built? If it was before 1980 when CEQA guidelines were in place, the soil was likely not monitored.
- What are the results from a Sacred Lands File Search?
- What are the results from a search with the California Historic Resources Information Systems?

Thank you, and I look forward to hearing from you.

Húu'uni 'óomaqati yáamaqati.

Re: CEQA and Land Use Notice Request for Brea Plaza Hotel and Apartments Expansion Project aka SCH 2020079022

Dear Ms. Steinkruger and Ms. Harris-Neal:

I am writing on behalf of Supporters Alliance For Environmental Responsibility ("SAFER"), regarding the project known as Brea Plaza Hotel and Apartments Expansion Project aka SCH 2020079022, including all actions related or referring to the proposed demolition of existing uses/buildings and the construction of proposed hotel, residential, restaurant, and office uses, and parking, resulting in a net increase of 150 hotel rooms, 194 residential units, 198 parking spaces, and a reduction of 3,068 commercial square space located on a 3.8 acre portion at 1639 E Imperial Highway in the City of Brea("Project").

We hereby request that the City of Brea ("City") send by electronic mail, if possible or U.S. Mail to our firm at the address below notice of any and all actions or hearings related to activities undertaken, authorized, approved, permitted, licensed, or certified by the City and any of its subdivisions, and/or supported, in whole or in part, through contracts, grants, subsidies, loans or other forms of assistance from the City including, but not limited to the following:

- Notice of any public hearing in connection with the Project as required by California Planning and Zoning Law pursuant to Government Code Section 65091.

- Any and all notices prepared for the Project pursuant to the California Environmental Quality Act ("CEQA"), including, but not limited to:

    - Notices of any public hearing held pursuant to CEQA.
    - Notices of determination that an Environmental Impact Report ("EIR") is required for the Project, prepared pursuant to Public Resources Code Section 21080.4.
    - Notices of any addenda prepared to a previously certified or approved EIR.
    - Notices of any scoping meeting held pursuant to Public Resources Code Section 21083.9.
    - Notices of preparation of an EIR or a negative declaration for the Project, prepared pursuant to Public Resources Code Section 21092.
    - Notices of availability of an EIR or a negative declaration for the Project, prepared pursuant to Public Resources Code Section 21152 and Section 15087 of Title 14 of the California Code of Regulations.

- Notices of approval and/or determination to carry out the Project, prepared pursuant to Public Resources Code Section 21152 or any other provision of law.
- Notices of approval or certification of any EIR or negative declaration, prepared pursuant to Public Resources Code Section 21152 or any other provision of law.
- Notices of determination that the Project is exempt from CEQA, prepared pursuant to Public Resources Code section 21152 or any other provision of law.
- Notice of any Final EIR prepared pursuant to CEQA.
- Notice of determination, prepared pursuant to Public Resources Code Section 21108 or Section 21152.

Please note that we are requesting notices of CEQA actions and notices of any public hearings to be held under any provision of Title 7 of the California Government Code governing California Planning and Zoning Law. **This request is filed pursuant to Public Resources Code Sections 21092.2 and 21167(f), and Government Code Section 65092**, which requires agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

Please send notice by electronic mail, if possible or U.S. Mail to:

RE: Brea Plaza Hotel and Apartments Expansion Project

Dear Ms. Vander Dussen:

As a representative of the 499 homeowners of the Brea Glenbrook Homeowners Association, I am writing this letter in opposition to the proposed project named above.

We are the single-family residential neighborhood bounded by Imperial Highway on the South, the 57 Freeway on the West, Birch St on the North, and the Birch Hills Golf Course and Brea Union Plaza on the East. As such, we are the closest neighbor to the proposed hotel and apartments expansion project at Brea Plaza.

Besides serious questions about the business case for an additional hotel in Brea beyond those already existing, under-construction, approved, and proposed, we have serious concerns about this project on multiple fronts including parking, traffic, and school occupancy.

Concern One—Parking: The Brea Plaza is a somewhat popular center given its location and diverse set of tenants. In normal non-pandemic times, it is common for the parking lots at the Plaza to be quite full. The project proposes to add approximately 200 parking spots more than currently exist. We see the 150 hotel rooms and 194 residences easily and drastically exceeding this allotment. The easement from Mercury Insurance is problematic to us because a) the surface spots nearest to Brea Plaza already were used as night/weekend overflow parking for the Plaza guests and b) the remaining surface spots are both relatively far from the proposed development and accessed via Greenbriar Lane.

Concern Two—Traffic: Besides the additional night and weekend traffic flows on Greenbriar Lane, we anticipate additional nuisance traffic through our neighborhood via Greenbriar Lane, Ravencrest Drive, and Castlegate Lane, which is already an issue due to Mercury Insurance employees using this route to bypass the oft-congested intersection of Associated Road and Imperial Highway. During traditional commuting hours as well as weekend evenings when Brea Plaza is busy, it is common for significant congestion to occur on both westbound and eastbound Imperial Highway, as well as within the Plaza itself. The turn from the Plaza to northbound Associated Road towards our neighborhood is already dangerous at nearly all hours of the day. Accessing the northbound 57 Freeway onramp at Imperial Highway can also be delayed due to vehicles blocking the intersections around the Plaza. The proposed development will exacerbate this already problematic situation, making it difficult for our

community to access the 57 Freeway or other areas to the West. Other significant new construction in the City constrains our other options for freeway access such as the Lambert onramp via Birch Street and State College Boulevard.

Concern Three—School Occupancy: The 194 residences likely will contribute to what many parents already feel are overcrowded conditions at Brea Country Hills Elementary School, Brea Jr. High School, and Brea-Olinda High School.

Combined with the other already under-construction and approved residential developments in the city, we see this additional proposal as nothing but a bad idea. We urge you to consider the voices of the proposed development's neighbors when preparing your impact report. We are prepared for, but would like to avoid a prolonged campaign against the approval of this development.

We look forward to hearing back from you or the city regarding our concerns at your earliest convenience.

Respectfully,

Ted Gribble, Community Relations Chair
Brea Glenbrook Homeowners Association

NATIVE AMERICAN HERITAGE COMMISSION

RECEIVED
AUG 10 2020
BY: ch

July 28, 2020

Sheri Vander Dussen
City of Brea
1 Civic Center Circle
Brea, CA 92821

Re: 2020079022, Brea Plaza Hotel and Apartments Expansion Project, Orange County

Dear Ms. Vander Dussen:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Subject: Brea Plaza NOP

Ms. Sheri Vanderdussen

In reference to the - Brea Plaza Hotel and Apartments Expansion Project NOP, the draft EIR should analyze the following:

Land use. In that the proposed project is located on a parcel zoned GC, and residential units are intended to be constructed thereat, the draft EIR should specifically address (i) why the General Plan should be amended and (ii) why a zoning change should be made with regards to such parcel to allow residential use in an area designated for commercial use. The Brea General Plan has been time tested and proven to be a successful master plan for orderly development in the city of Brea and as such is established precedent that should not be changed without a good and compelling reason.

The development of the proposed project that will have detrimental effects on **public health and safety**, especially in terms of traffic congestion and over dense use of such parcel. Those detrimental effects should be self-evident in the properly prepared draft EIR. While corporate landowners are stakeholders in Brea, it can't be overemphasized that the residents of Brea will be most affected by the detrimental effects of the proposed project.

While the City will have increased property tax revenues and other fees from the proposed project, the mid and long term costs would outweigh those benefits and most importantly adversely affect the quality of life of Brea residents because of overdevelopment issues, especially environmental issues. We have already seen evidence of this trend with the approval of the Central Park Village and Hines projects, and the proposals of the Brea 265 and Mercury Lane projects. While there is a serious shortage of housing in the metropolitan areas of California, the solution can't simply be solved by overdevelopment without the appropriate infrastructure improvements, especially mass transit which is sorely lacking in Orange County

and unlikely to be available in the next decade or more. The disruption of the order set forth in the General Plan will result in the disruption of orderly development in Brea and have an adverse effect of the quality of life for Brea residents.

Air quality. In particular, the high density residential structures will result in additional burden to air quality compared to its current zoning with its carbon and nitrogen footprint from car trips generated by residents and workers at the proposed project and the use of carbon fuels for heating water and likely living spaces. Though state mandated solar energy usage for the proposed project will reduce this impact, the net impact still must be determined using reasonable assumptions. The number of parking spaces for the proposed project is insufficient and cause overflow parking on nearby streets. In addition, the residents and guests at the hotel of the proposed project will be within 100 feet of the 57 freeway and the combustion emissions of motor vehicles including diesel exhaust. In addition, the proximity of the proposed project to the major arterial roads, State College Boulevard and Imperial Highway subjects and exposes the numerous densely populated proposed residents to much higher concentrations of air pollutants, especially CO, diesel exhaust, and particulate matter.

Population and housing. The proposed project will add far too many new housing units and a related number of residents and guests to the site. Why should the General Plan be amended or varied to allow such high density residential development when it would be inconsistent with established nonresidential use? While Brea is in need of more housing, the question is what is the impact to the environment due to this increase in residential units and people living therein, especially when the current General Plan specifies no residential use.

In view of the pandemic, it is a simple fact that over density allows for ready spread of human communicable pathogens. Residents in New York and other densely populated areas including Los Angeles are moving from the city to the suburbs to better protect their health from over densely populated areas. This is a serious public health concern that should receive your top priority and concern.

Public Services. To what extent will the proposed project have on the need for additional public services, the cost of such services, and how those services will be paid for not only in terms of upfront development fees but also long term estimated costs needed to provide future services to the extent not covered by upfront development fees or direct payment through specific funds for such services such as from a CFD for the proposed project?

The additional police, fire, paramedic, traffic and maintenance services required will need to be determined based on the estimated number of additional residents and units. In particular, it is expected that traffic along Imperial Highway, Birch Street, Lambert Road, State College Blvd. and Brea Blvd. will be much heavier and may require more dedicated police services to ensure smooth traffic flow despite certain limited traffic improvements to accommodate increased traffic volume and flow. Residents of Brea are complaining more and more about traffic congestion and about drivers speeding and going through red lights and resulting serious vehicular accidents on major arterial roads. With the tight municipal budget, the police are constrained as to enforcement of traffic laws, and having enough available officers to respond to calls from residents. How will the proposed project further dilute public services on a qualitative and quantitative basis?

Transportation and circulation. The geography of Brea is such that a long range of hills (Puente and Chino) along its northern border. There are only a few north to south highways

that go through these hills, namely Brea Canyon Road, the 57, and Carbon Canyon Road. Due to the differential in (1) wages and (2) market value per square foot of residential housing between the Inland Empire and Orange County, many worker-commuters travel southbound in the morning to work and northbound to go home in the evening during rush. While some may argue that many of those worker-commuters may move to the proposed project to shorten their drive, this will be unlikely unless they can afford Brea housing costs and want to pay that price, thus it is more likely there will not be very many of those that will move to the proposed project. There is no indication in the NOP that the proposed project is expected to provide affordable housing, and as such the proposed residential part of the project will be assumed to be premium apartments in line with the nearby Hines project apartments. As such it is unlikely many who work in Brea will be able to afford living in the proposed apartments and reduce traffic congestion in Brea.

In the recent draft EIR for the Mercury Lane proposed project, the impact of traffic was identified as significant. Specifically, it provided that the Level of Service of key intersections in Brea would decline and that the Brea Boulevard and Imperial Highway and State College Blvd. and Imperial Highway would in a year be "D" grade or in simple terms unacceptable. The traffic impact of the proposed project will also likely be significant.

The key intersections in Brea have so much traffic in all directions that little if any efficiency will be gained by developer suggestions or offers to mitigate traffic by providing smart signals using predictive AI and timing differentials to control the order and duration of the different signal lights and arrows. This is especially true when those same intersections are so close to the 57, Imperial Highway and other state controlled intersections where Brea has no jurisdiction to control because traffic flow on state routes is takes precedent over traffic flow on city roads. Gridlock will have a serious and possibly lethal consequence for residents of Brea that will need emergency medical services and are unable to receive those services in a timely manner.

Completely ridiculous

194 Residential
150 Hotel
plus some Commercial units

Parking spaces =198 out of your minds! during the day when there are few movies you can't get a spot!

Maybe think your need 194+150+ (Commercial Units X 5 spots for each 750 sq ft) = minimum parking spots.

Environmental impact we have the crazy Birch/state College project being built not complete so any study will be a total guess until its completed and full occupied! So wait until then to consider other projects of this scale it would be irresponsible to act on any Environmental Impact Report unitl the new project is completely occupied.

Please start to look around Brea

1. Sears has was vacant 1 year then partially occupied by so off brand store not sure if they are still there? no hearing Amazon wants to go in as a Distribution center, lots of little delivery truck drivers on a time schedule driving like manics!

2. Schools all busting at the seams and we still aren't requiring the Developers to build new school buildings at no cost to taxpayers to accommodate the additional students or is the plan to drive residents residents out by making Brea undesirable and overtaxed with school bonds that developers should be paying?

Don't guess on RE Taxes, Sales Tax, etc... if there is no one to occupy or you don't get full occupancy until 7-10 years where you getting the money from??? Look at how COVID is affecting State Gas Tax revenue, look to the North East and MidWest look at cities that thought they were invincible and people

would always.

Re: Brea Plaza Hotel and Apartments Expansion Project
City of Brea, Planning Division
8/19/20

Dear Sheri,

I would like to have my feedback submitted as part of the Brea Plaza Hotel and Apartments Expansion Project. Please also add me to the email list regarding updates.

I have always supported the building of affordable homes in Brea and I would hope that these proposed units would address low-income housing that we know is so desperately needed. A lot of people work as gig workers or independent contractors and one certainly cannot afford rent on entry-level wages. A lot of people work in fast-food services and one certainly cannot afford rent on entry-level wages. This is who housing needs to be built for - our community at large.

However, a major concern I have is about the location of the housing units near the freeway. The 57 freeway is a major thoroughfare with heavy commuter traffic and semi-trucks which are well known for their carcinogenic pollution. This is unhealthy air for anyone, particularly children. Proximity to the freeway is a very unfortunate aspect of this project.

Mitigation would be necessary with trees and a sound wall.

My other concern is the tearing down of the only lower-cost, affordable movie theater in Brea. Downtown prices are 2-3 times higher and part of that increase was due to adding unnecessary services: charging extra for reserving a seat, a recliner seat with a seat warmer, food/drink services delivered to you. These are not amenities that families can typically afford or want. Imagine the costs for a family of 4. The current theater in the proposed Plaza offers an affordable entertainment option for families that city officials should not overlook.

Thank you very much for your acceptance of my feedback.

Sincerely yours,

Susan Perlson

Notice of Preparation of a Draft Environmental Impact Report for the Proposed Brea Plaza Hotel and Apartments Expansion Project (Proposed Project)

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Draft Environmental Impact Report (EIR). Please send a copy of the Draft EIR upon its completion and public release directly to South Coast AQMD as copies of the Draft EIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, and air quality modeling and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

CEQA Air Quality Analysis

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website[1] as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod[2] land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds[3] and localized significance thresholds (LSTs)[4] to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road

[1] South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook
[2] CalEEMod is available free of charge at: www.caleemod.com.
[3] South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf.
[4] South Coast AQMD's guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from the overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA ***operational*** thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment[5].

Sensitive receptors are people that have an increased sensitivity to air pollution or environmental contaminants and include schools, daycare centers, nursing homes, elderly care facilities, hospitals, and residential dwelling units. The Proposed Project will include, among others, 194 residential units and is located in close proximity to State Route 57, and to facilitate the purpose of an EIR as an informational document, it is recommended that the Lead Agency perform a mobile source health risk assessment[5] to disclose the potential health risks[6].

The California Air Resources Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective*[7] is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process with additional guidance on strategies to reduce air pollution exposure near high-volume roadways available in CARB's technical advisory[8].

Mitigation Measures

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook[1], South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2016 Air Quality Management Plan[9], and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy[10].

Health Risk Reduction Strategies

Many strategies are available to reduce exposures, including, but are not limited to, building filtration systems with MERV 13 or better, or in some cases, MERV 15 or better is recommended; building design, orientation, location; vegetation barriers or landscaping screening, etc. Enhanced filtration units are capable of reducing exposures. However, enhanced filtration systems have limitations. For example, in a

[5] South Coast AQMD's guidance for performing a mobile source health risk assessment can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis.
[6] *Ibid.*
[7] CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* can be found at: http://www.arb.ca.gov/ch/handbook.pdf.
[8] CARB's technical advisory can be found at: https://www.arb.ca.gov/ch/landuse.htm.
[9] South Coast AQMD's 2016 Air Quality Management Plan can be found at: http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2017/2017-mar3-035.pdf (starting on page 86).
[10] Southern California Association of Governments' 2016-2040 RTP/SCS can be found at: http://scagrtpscs.net/Documents/2016/peir/final/2016fP EIR_ExhibitB_MMRP.pdf.

study that South Coast AQMD conducted to investigate filters[11], a cost burden is expected to be within the range of $120 to $240 per year to replace each filter panel. The initial start-up cost could substantially increase if an HVAC system needs to be installed and if standalone filter units are required. Installation costs may vary and include costs for conducting site assessments and obtaining permits and approvals before filters can be installed. Other costs may include filter life monitoring, annual maintenance, and training for conducting maintenance and reporting. In addition, because the filters would not have any effectiveness unless the HVAC system is running, there may be increased energy consumptions that the Lead Agency should evaluate in the Draft EIR. It is typically assumed that the filters operate 100 percent of the time while residents are indoors, and the environmental analysis does not generally account for the times when the residents have their windows or doors open or are in common space areas of the project. These filters have no ability to filter out any toxic gases. Furthermore, when used filters are replaced, it has the potential to result in emissions from the transportation of used filters at disposal sites and generate solid waste that the Lead Agency should evaluate in the Draft EIR. Therefore, the presumed effectiveness and feasibility of any filtration units should be carefully evaluated in more detail prior to assuming that they will sufficiently alleviate exposures to diesel particulate matter emissions.

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at lsun@aqmd.gov.

Sincerely,

Lijin Sun

Brea, CA 92821

August 22, 2020

Dear Ms. Vander Dussen,

Thank you for allowing written comments to be submitted to the Brea City Planning Division regarding the proposed Brea Plaza Shopping Center redevelopment (or "reshaping," as it was called in the newspaper). We have lived in Brea Glenbrook (East) for over 40 years and have raised our family here.

As you know, Brea Glenbrook consists of approximately 500 homes situated on both sides of Associated. Along with our many neighbors, we patronize many of the shops and restaurants in Brea Plaza on a regular basis. We hope you are aware that already the parking spaces, shops, and restaurants in the Brea Plaza Shopping Center are usually busy and being used. The addition of *194 multistory apartment units, offices, 250 hotel rooms, and 198 parking spaces* means the people living in the 500 Glenbrook homes, the Gingerwood homes, and other nearby homes and businesses will compete with many more people for parking spaces and restaurant seating, etc. All this equates to more traffic and congestion!

Brea is already in the process of developing more buildings and apartments in our lovely city, even now creating more congestion, traffic, etc. (One example is taking place now on Birch near the Brea Shopping Mall.) We do not need even more traffic and congestion on Imperial Highway and other Brea streets.

We are one hundred per cent opposed to the plans we read about this ill-advised redevelopment or "reshaping" plan in the News Tribune newspaper, dated August 20-21. Please consider wisely and cancel plans to remake Brea Plaza Shopping Center.

Sincerely,

Richard Kilpatrick
Susan Kilpatrick

Subject: Written Comments Re: NOP Brea Plaza Hotel and Apartments Expansion Project

Hi Sheri,

On behalf of Mercury Casualty Company ("Mercury"), we are submitting the following comments in response to the Notice of Preparation dated July 27, 2020 (the "NOP") in connection with the Brea Plaza Hotel and Apartments Expansion Project (the "Project") draft Environmental Impact Report.

In the "Existing Conditions" section of the NOP it states "Additionally, the applicant has an easement with Mercury Insurance for approximately 180 spaces during business hours, [and] all surface spaces (approximately 500 spaces) after 5 pm and on weekends."

Mercury does not believe the above statement from the NOP accurately reflects the parking rights the applicant maintains on Mercury's property. Mercury believes that the scope of the parking rights, although not specifically defined in any documents or agreements encumbering Mercury's property, is more limited and that any such rights remain in existence for only a limited duration (approximately another six years).

Accordingly, in assessing the environmental or other impacts of the Project, we do not believe the City of Brea, or its consultants, should consider any parking rights the applicant may have with respect to the Mercury property.

Regards, Jim

CITY OF FULLERTON
Community & Economic Development Department

August 26, 2020

Sheri Vander Dussen, Contract Planner
E-Mail: sheri.vanderdussen@kimley-horn.com
City of Brea
1 Civic Center Circle
Planning Division, Level 3
Brea, CA 92821

SUBJECT: Notice of Preparation for the Brea Plaza Hotel and Apartments Expansion Project Draft Environmental Impact Report

Dear Ms. Vander Dussen:

Thank you for the opportunity to comment on the Notice of Preparation (NOP). Staff has reviewed the NOP for the Brea Hotel and Apartments expansion project which proposes to demolish portions of the shopping center and movie theatre to construct a mixed-use concept including a 150-room hotel, 194 residential units, and restaurant uses. The City of Fullerton is located west of the project site.

Staff understands that under the current CEQA requirements for transportation/traffic, projects are now reviewed under Vehicle Miles Traveled (VMT) for CEQA purposes. However, due to the proximity of the project to the City of Fullerton, the City respectfully requests the following be reviewed and/or included as part of the analysis of the project:

1. The City of Fullerton's Transportation Assessment Policies and Procedures (TAPP) was approved by the Fullerton City Council in June of 2020. The TAPP outlines how traffic analysis is to be conducted in the City of Fullerton and should be the guiding document for the conduct of traffic analysis within the City (see attached). The TAPP is available through the City's website.

2. Please provide a detailed description in the traffic study of the co-living units and how trip generation and distribution is determined for such units.

3. It is suggested that as a minimum an LOS analysis be conducted for the signalized intersections along Imperial Highway from State College through the SR-57 interchange to Placentia Avenue. It is also requested that queuing analysis for key turning movements be conducted to assess if the new development's added traffic is likely to result in overflowing turn pockets or excessive delays under pre-Covid-19 traffic conditions.

4. It is also requested that the traffic study include a LOS assessment of traffic operations along Associated Road and State College between the Brea Plaza Shopping Center and California State Fullerton on a typical pre-Covid-19 weekday when classes are in session at the University.

5. Since the project is located immediately adjacent to the border between the City of Brea and the City of Fullerton, should it be determined that the proposed project has a VMT impact and/or a LOS impact, it is requested that the City of Brea consider discussing potential mitigation measures and/or conditions of the approval with the City of Fullerton before finalizing the traffic study.

If you have any questions regarding this correspondence, please contact Maribeth Tinio, Senior Planner at (714)738-6561 or by e-mail at maribeth.tinio@cityoffullerton.com.

Sincerely,

Matt Foulkes
Community & Economic Development Director

JUNE 16, 2020

TRANSPORTATION ASSESSMENT POLICIES AND PROCEDURES

ADOPTED BY CITY COUNCIL RESOLUTION NO. 2020-49

Table of Contents

5.0 – VMT Screening Procedure....10
6.0 – VMT-Based Analysis Policies and Procedures....13

1.0 Background Information

The City of Fullerton completed a comprehensive update to the City's general plan, called The Fullerton Plan, in 2012. It includes an Action to monitor private development projects adjacent to the street intersections/segments with substandard (deficient) right-of-way, as analyzed to accommodate multi-modal transportation infrastructure, and facilitate dedication in accordance with City regulations (Table 13, Action 5.6) in support of the goal for a balanced system promoting transportation alternatives that enable mobility and an enhanced quality of life (Goal 5). The Fullerton Plan includes policies that support regional and sub regional efforts such as the Master Plan of Arterial Highways, the Orange County Congestion Management Plan, Signal Synchronization Master Plan, and the Growth Management Plan (P5.1) and operating and maintaining a comprehensive network of arterial highways and local roads supporting safe and efficient movement of people, goods and services to, through and within the City (P5.6). Furthermore, State and Federal laws require the correlation of building intensities and traffic capacity in a General Plan.

Separately, SB 743, signed by the Governor in 2013, changes the way transportation impacts are identified for environmental analysis purposes. Following the rule making process that was completed in December of 2018, the California Environmental Quality Act (CEQA) Guidelines identify that, by July of 2020 all lead agencies must use Vehicle Miles Traveled (VMT) as the new transportation metric for identifying impacts for land use projects. VMT replaces auto delay, Level of Service (LOS), and other similar measures of vehicular capacity or traffic congestion as a basis for determining significant impacts. This change is intended to assist in balancing the needs of congestion management with statewide goals related to infill development, promotion of public health through active transportation, and reduction of greenhouse gas emissions.

As noted in CEQA Guidelines Section 15064.7(b) below, lead agencies are encouraged to formally adopt their significance thresholds and this is key part of the SB 743 implementation process.

> *(b) Each public agency is encouraged to develop and publish thresholds of significance that the agency uses in the determination of the significance of environmental effects. Thresholds of significance to be adopted for general use as part of the lead agency's environmental review process must be adopted by ordinance, resolution, rule, or regulation, and developed through a public review process and be supported by substantial evidence. Lead agencies may also use thresholds on a case-by-case basis as provided in Section 15064(b)(2).*

SB 743 does not prevent the City from continuing to analyze delay or LOS outside of CEQA review for other transportation planning or analysis purposes unrelated to CEQA traffic impacts such as land use adjacency, general plan consistency, safety, community benefits, and/or public health pursuant to the City's existing general plan (The Fullerton Plan) goals.

The purpose of this document is to establish the City's policy and procedure to evaluate a project for general plan consistency (LOS analysis) and CEQA compliance (VMT analysis) and address, through project conditions and mitigation measures, any corresponding effects on transportation or potential significant impacts.

2.0 Applicability

An applicant seeking discretionary project approval will submit the proposed project to the City's Community and Economic Development Department in accordance with published application submittal requirements. Written project comments are provided to the applicant within 30 days of the application submittal deadline (1st submittal review).

LOS Analysis
As part of the 1st submittal review, City staff (or City Traffic Engineer) will calculate a project's trip generation based on the latest Institute of Transportation Engineers (ITE) Trip Generation Manual and review that data against the following criteria.

An LOS analysis shall be required for a proposed project that meets any of the following criteria:

- Either the AM or PM peak hour trip generation is expected to exceed 40 net[1] new vehicle trips;
- Regardless of net new vehicle trips, the combination of the land use and location justify analysis at the City's discretion;

If a project does not meet any of the applicability criteria, no further analysis for LOS is needed.

Projects meeting any of the applicability criteria shall complete the necessary LOS analysis to determine if they have a potential effect on transportation. See Section 4.0, "LOS-Based Analysis Policy and Procedure", for details.

VMT Analysis
As part of the 1st submittal review, City staff will make a determination if the project is exempt from CEQA. The VMT Analysis is not required for projects that are exempt from CEQA. If a project is not exempt from CEQA, City staff (or City Traffic Engineer) will perform a screening test and associated secondary analysis.

A VMT analysis shall be required for a proposed project that does not meet any of the following criteria including the associated secondary analysis[2]:

- Located in a Transit Priority Area;
- Located in a Low VMT-generating area;
- Project type is presumed to have a less than significant impact.

If a project meets any of the screening criteria including the associated secondary analysis, no further analysis for VMT is needed. The results of the screening would be used in the transportation section of the CEQA analysis that will be prepared for the project.

Projects not meeting any of the screening criteria including the associated secondary analysis shall complete the VMT analysis to determine if they have a potentially significant VMT impact. See Section 6.0, "VMT-Based Analysis Policy and Procedure", for details.

---

[1] Net new trips include total in and out trips from the project site less trips attributed to the existing use.

[2] See Section 5.0, "VMT Screening Procedure", for screening and secondary analysis methodology.

3.0 Thresholds

The purpose of the analysis for applicable projects is to identify if there is a potential effect on transportation as determined by the LOS analysis and/or potential significant impact under CEQA as determined by the VMT analysis.

LOS Analysis

Level of Service (LOS) is a qualitative measure of describing operational conditions of an intersection in terms of congestion or delay experience by traffic. Service levels range from LOS A to LOS F with LOS A representing excellent operating conditions and free flow, and LOS F representing extreme congestion and delay. There are two accepted methods of determining LOS, Highway Capacity Manual (HCM) and Intersection Capacity Utilization (ICU). The City of Fullerton utilizes HCM methodology. Within Fullerton, there are facilities regulated by Orange County Transportation Authority (OCTA) and Caltrans. OCTA utilizes ICU while Caltrans utilizes HCM. A project is responsible for performing all applicable calculations. Therefore, while the City only sets its own policy, the effects on transportation are identified for all agencies for reference.

Highway Capacity Manual (HCM)

The City of Fullerton definition of acceptable operating conditions for signalized and unsignalized intersections is LOS D[3]; unacceptable operations is LOS E and LOS F.

However, based on the historic context in which they are developed, LOS E is acceptable and LOS F is unacceptable at the following intersections:

- Harbor Boulevard / Chapman Avenue
- Harbor Boulevard / Commonwealth Avenue

Therefore, an effect on transportation occurs if any of the following criteria are satisfied:

1. The project causes a signalized or unsignalized intersection operating at or above an acceptable operating condition to degrade to an unacceptable condition, or
2. The project causes a signalized or unsignalized intersection operating at an unacceptable operating condition to further degrade and for a signalized intersection the change is:
    a. From LOS E to LOS F,
    b. An increase of at least 4 seconds for an LOS E intersection, or
    c. An increase of at least 2 seconds for an LOS F intersection.

Intersection Capacity Utilization

The Orange County Transportation Authority's (OCTA) definition of acceptable operating conditions is LOS E for intersections that are part of the Orange County Congestion Management Program Highway System (CMPHS); unacceptable operation is LOS F. This applies to the following:

- Harbor Boulevard / Orangethorpe Avenue
- Harbor Boulevard / Imperial Highway
- State College Boulevard / Orangethorpe Avenue

[3] LOS D may also be considered an acceptable operating condition by Caltrans; consultation is recommended to determine the appropriate LOS by location.

An effect on transportation occurs if either of the following criteria are satisfied:

1. The project causes an intersection operating at or above an acceptable operating condition to degrade to an unacceptable condition, or
2. The project causes an intersection operating at an unacceptable operating condition to increase (worsen) the ICU rating by more than 0.10.

VMT Analysis

Land Use Project

A land use project would result in a potentially significant project-generated VMT impact if either of the following conditions are satisfied:

1. The project-generated average total daily VMT per service population in the baseline year[4] exceeds the City of Fullerton General Plan Buildout average total daily VMT per service population calculated with Origin/Destination VMT; or
2. The project-generated average total daily VMT per service population in the horizon year[5] exceeds the City of Fullerton General Plan Buildout average total daily VMT per service population calculated with Origin/Destination VMT.

Additionally, the land use project's[6] effect on VMT would be considered potentially significant for purposes of determining a cumulative impact if either of the following conditions are satisfied:

1. The addition of the project in the baseline year causes an increase in the citywide average total daily VMT per service population calculated with Boundary Method VMT; or
2. The addition of the project in the horizon year causes an increase in the citywide average total daily VMT per service population calculated with Boundary Method VMT.

Transportation Project

A transportation project's effect on VMT would be considered potentially significant for purposes of determining a cumulative impact if either of the following conditions are satisfied:

1. The addition of the project in the baseline year causes an increase in the citywide average total daily VMT per service population calculated; or
2. The addition of the project in the horizon year causes an increase in the citywide average total daily VMT per service population.

[4] "Baseline year" is the year in which the CEQA analysis for the project commenced.

[5] "Horizon year" is a year in the future corresponding to the forecast used for modeling purposes.

[6] For a long-range planning land use project such as a general plan, only the cumulative impact analysis of the project's effect on VMT is required.

4.0 LOS-Based Analysis Policies and Procedures

Prior to beginning the study, the Consultant preparing the Transportation Assessment (Consultant) shall coordinate with the City Traffic Engineer on the study area, ambient growth for opening year conditions, project trip distribution assumptions, and components of site access analysis. The Consultant shall prepare a Scope of Work (Scope), consistent with the procedures outlined below, for review and approval of the City Traffic Engineer prior to the commencement of the LOS-Based Analysis. The approved Scope shall be provided as an attachment to the Transportation Assessment[7].

Methodology

Within the study area identified by the City Traffic Engineer, Level of Service (LOS) analysis shall be conducted at identified intersections.

The City of Fullerton requires use of the latest Highway Capacity Manual (HCM) methodology for the traffic impact analysis with the following assumptions for signal timing parameters:

- Cycle length and pedestrian timing parameters – existing
- Minimum left turn split time, including clearance interval timing – 10 seconds
- Saturation flow rates (unless otherwise specified by City Traffic Engineer):
    - Thru and right turns – 1,900 vehicles per hour (vph)
    - Left Turns –
        - Single Lane – 1,800 vph
        - Dual Lanes – 3,500 vph
        - Triple Lanes – 5,100 vph

Programs such as Synchro, Vistro, or Highway Capacity Software (HCS) are acceptable to use for the HCM analysis. Any other program for HCM analysis will need to be first approved by the City Traffic Engineer.

Analysis Scenarios & Effects on Transportation

Four scenarios shall be evaluated in addition to establishing the existing conditions at the discretion of the City Traffic Engineer and may be summarized in a single table (see Table 4-1 for formatting) for each of the following analysis scenarios. Unacceptable operating conditions shall be identified in **bold.** Detailed calculations shall be supplied as an appendix to the Transportation Assessment.

TABLE 4-1 {INSERT ANALYSIS SCENARIO} PEAK HOUR INTERSECTION CAPACITY ANALYSIS

	Intersection	Minimum Acceptable LOS	Time Period	Control Type (Signalized/Unsignalized)	Delay Per Vehicle (seconds/ vehicle)	LOS
#			AM PM			

[7] Should preparation of both a LOS-Based and VMT-Based Analysis be required, these can be prepared together in one Transportation Assessment or in separate Transportation Assessment documents at the discretion of the applicant.

Analysis Scenarios:

a. Existing Conditions

Existing traffic conditions using data collected within the previous 24-month period unless otherwise directed by the City Traffic Engineer. The raw data from sources other than the City, on which existing conditions are based (i.e. traffic counts), must be supplied as an appendix to the Transportation Assessment, identifying the source.

b. Project Opening Year Without Project

Existing traffic conditions plus ambient growth and traffic from all the development within the study area for which an application has been submitted ("pending projects"), or that have been approved but not yet constructed.

c. Project Opening Year With Project

Existing traffic conditions plus ambient growth and traffic from all the development within the study area for which an application has been submitted ("pending projects"), or that have been approved but not yet constructed, plus traffic generated by the proposed project.

d. General Plan Development

Forecast traffic conditions of General Plan build-out based on OCTAM projections for a project that includes a zoning amendment, general plan revision, or otherwise proposes development that exceeds the land use intensity assumed for the General Plan and/or at the discretion of the City Traffic Engineer.

e. General Plan Development With Project

Forecast traffic conditions of General Plan build-out based on OCTAM projections plus traffic generated by the proposed project that includes a zoning amendment, general plan revision, or otherwise proposes development that exceeds the land use intensity assumed for the General Plan and/or at the discretion of the City Traffic Engineer.

Projects that are to be constructed in more than one phase shall require interim year future analysis to address each phase of the development and its associated traffic effects. The year(s) to be analyzed shall coincide with the scheduled phasing and shall be approved by the City Traffic Engineer or designee.

Trip Generation

Trip generation shall be calculated using the latest edition of the ITE Trip Generation Manual, unless directed otherwise by City Traffic Engineer. If the generation rates do not address proposed land use in sufficient detail, rates from other documented sources (i.e. SCAG) or from a similar existing site may be used with prior approval from the City Traffic Engineer. Internal capture and pass-by trip reductions, where applicable, shall be first approved by the City Traffic Engineer.

Trip Distribution/Assignment

The basic methodology and assumptions used to develop trip distribution and assignments must be clearly stated. This includes description of trip distribution and directional approach for vehicle trips to and from the site along with the specific roadways that will be utilized by site-generated traffic is required.

Intersection Improvements

When a transportation effect is identified (as defined in Section 3.0, Thresholds) at a signalized intersection, the Transportation Assessment shall (1) identify improvements to the intersection that will bring back the intersection to an acceptable LOS and (2) identify the project's fair share portion of the effect.

When a transportation effect is identified at an unsignalized intersection, the project shall be evaluated for installation of stop control (four way stop control) or traffic signal per the latest version of the California Manual on Uniform Traffic Control Devices (CA MUTCD) with identification of the project's fair share as applicable. For the traffic signal warrant analysis, the peak hour warrant shall be used. Signal warrant worksheets shall be included as an appendix to the Transportation Assessment.

Additionally when a transportation effect is identified at a signalized or unsignalized intersection, collision history shall be evaluated to see if the additional project traffic will affect any critical movements at the intersection. Improvements shall be identified as necessary. Collision history shall be included as an appendix to the Transportation Assessment.

Cost of Improvements

The cost improvements will be determined by the Consultant in cooperation with the City Traffic Engineer. The project shall be conditioned to contribute their fair share of the cost of improvement or construct the improvement if warranted and appropriate. In either case the project may also be conditioned to provide a dedication required to facilitate the improvement. If a feasible identified improvement(s) cannot be provided as determined by the City Traffic Engineer, then contribution of fair share towards an improvement established at an acceptable LOS will be considered. The fair share shall be determined on a case-by-case basis as warranted and appropriate by the City Traffic Engineer.

Additional LOS Analysis

OCTA

An additional LOS analysis utilizing the latest Intersection Capacity Utilization (ICU) methodology (see Table 4-2 for formatting) shall be required for a proposed project that meets any of the following criteria:

- Project Average Daily Trips (ADT) meets or exceeds 2,400; or
- Project ADT meets or exceeds 1,600 when the proposed development has direct access to Harbor Boulevard, Imperial Highway, Orangethorpe Avenue, and/or State College Boulevard[8].

TABLE 4-2 {INSERT ANALYSIS SCENARIO} PEAK HOUR INTERSECTION CAPACITY ANALYSIS

	Intersection	Minimum Acceptable LOS	Time Period	Control Type (Signalized/Unsignalized)	Volume/ Capacity Ratio	LOS
#			AM PM			

[8] These streets are part of the Orange County Congestion Management Program Highway System (CMPHS)

8

The Consultant shall consult OCTA and the current Congestion Management Program for updates on their requirements.

Caltrans

An additional analysis utilizing the latest Highway Capacity Manual (HCM) methodology shall be required for a project when either the AM or PM peak hour trip generation is expected meet or exceed 100 net new trips assigned to a State highway facility (facility) operating at any LOS, generate between 50 and 99 net new trips on a facility operating at LOS C or LOS D, or up to 49 net new trips on a facility operating at LOS E or LOS F.

The Consultant shall consult Caltrans for updates on their requirements.

Site Access Analysis

Based on the land use and/or location the analysis may also include any of the following evaluations, or as otherwise specified by the City Traffic Engineer:

- Curb radii, including corner cutoffs, for adequacy of turning maneuvers,
- Pocket storage lengths at driveways and/or site adjacent intersection(s) for adequacy of queuing,
- Site distance at project driveways for adequacy of vision clearance, and/or
- Potential turning conflicts between driveways and/or driveway(s) to street(s).

5.0 VMT Screening Procedure

If a project is not exempt from CEQA, City staff (or City Traffic Engineer) will perform a screening test and associated secondary analysis as required. The screening criteria and associated secondary analysis are detailed below.

Criteria 1: Transit Priority Area (TPA) Screening

Projects located within a TPA[9] may be presumed to have a less than significant impact absent substantial evidence to the contrary. A TPA is defined as a half mile area around an existing major transit stop or an existing stop along a high-quality transit corridor[10]. To identify if the project is in a TPA, the City will utilize "NOCC+", a spreadsheet tool developed for the use of North County Cities in identifying projects that could be considered for screening from project-generated VMT impacts.

For a project located in a TPA, City staff will perform the associated secondary analysis do determine if the project:

1. Has a Floor Area Ratio (FAR) of less than 0.75;
2. Includes more parking for use by residents, customers, or employees of the project than required by the City;
3. Is inconsistent with the applicable Sustainable Communities Strategy; or
4. Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

If the answer to any of these questions is yes, the project cannot be screened under Criteria 1. The project shall be considered for screening under Criteria 2 and 3.

Conversely, if the answer to all of these four questions is no, the project can be screened under Criteria 1 and no further analysis for VMT is needed.

Criteria 2: Low VMT Area Screening

Residential and office projects located within a low VMT area[11] may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, other employment-related and mixed-use land use projects may qualify for the use of screening if the project can reasonably be expected to generate VMT per service population that is similar to the existing land uses in the low VMT area. A low VMT area is defined as an individual traffic analysis zone (TAZ) where total daily Origin/Destination VMT per service population is 15% or more less

[9] Project location is based on parcel number(s).

[10] Pub. Resources Code, § 21064.3 - 'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.

Pub. Resources Code, § 21155 - For purposes of this section, a 'high-quality transit corridor' means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.

[11] Project location is based on parcel number(s).

than the City average total daily Origin/Destination VMT per service population. [12] To identify if the project is in a low VMT area, the City will utilize "NOCC+", a spreadsheet tool developed for the use of North County Cities in identifying projects that could be considered for screening from project-generated VMT impacts.

For a project located in a low VMT area, City staff will perform the associated secondary analysis do determine if the project:

1. Is inconsistent with the existing land use (i.e. if the project is proposing single-family housing, there should be existing single-family housing of approximately the same density); or
2. Has a unique attribute that would otherwise be misrepresented utilizing the data from the travel demand model such as including land uses that would alter the existing built environment in such a way as to increase the rate or length of vehicle trips.

If the answer to any of these questions is yes, the project cannot be screened under Criteria 2. The project shall be considered for screening under Criteria 3.

Conversely, if the answer to both of these questions is no, the project can be screened under Criteria 2 and no further analysis for VMT is needed.

Criteria 3: Project Type Screening

Some project types have been identified as having the presumption of a less than significant impact. The following land uses can be presumed to have a less than significant impact absent substantial evidence to the contrary as their uses are local serving in nature:

- Local-serving K-12 public schools
- Local-serving parks
- Day care centers
- Local-serving retail uses less than 50,000 square feet
- Local-serving hotels (e.g. non-destination hotels)
- Local-serving student housing projects
- Local-serving assembly uses (places of worship, community organizations)
- Community institutions (public libraries, fire stations, local government)
- Affordable, supportive or transitional housing
- Assisted living facilities
- Senior housing (as defined by HUD)

[12] TAZs are geographic polygons similar to Census block groups used to represent areas of homogenous travel behavior. Service population is population plus employment. Used with VMT, it provides a normalized standard unit for comparison purposes while accounting for the population and/or employment in a given area.

- Projects generating less than 836 daily VMT[13]

For a project to be local serving , its users (residents, customers, employees, visitors) would be existing within the community, meeting existing demand that would shorten the distance users would need to travel.

If the project is not one or more of the identified land uses, the project cannot be screened under Criteria 3.

Conversely, if the project is for one or more of the identified land uses, the project can be screened under Criteria 3 and no further analysis for VMT is needed.

[13] This threshold ties directly to the OPR technical advisory and notes that CEQA provides a categorical exemption for existing facilities, including additions to existing structures of up to 10,000 square feet, so long as the project is in an area where public infrastructure is available to allow for maximum planned development and the project is not in an environmentally sensitive area. (CEQA Guidelines, § 15301, subd. (e)(2).) Typical project types for which trip generation increases relatively linearly with building footprint (i.e., general office building, single tenant office building, office park, and business park) generate or attract an additional 110-124 trips per 10,000 square feet. 2012 California Household Travel Survey (CHTS) average trip length of 7.6 miles was applied to 110 daily trips to determine the associated total VMT with 10,000 square feet of office.

6.0 VMT-Based Analysis Policies and Procedures

Prior to the beginning of the study, the Consultant preparing the Transportation Assessment shall prepare a Scope of Work (Scope), consistent with the procedures outlined below, for review and approval of the City Traffic Engineer prior to the commencement of the VMT-Based Analysis. The approved Scope shall be provided as an attachment to the Transportation Assessment[14].

Projects not screened through Criteria 1, 2 or 3 shall complete a VMT analysis through the OCTAM model[15] to determine if there is a potential significant VMT impact. This analysis shall include both "project generated VMT" for the project-level evaluation and "project effect on VMT" for the cumulative evaluation of transportation impacts.

Methodology

Project Generated VMT

The City has selected the Origin/Destination VMT methodology to provide a more complete capture of all travel (car and truck trips) within the study area, including trips that may begin or end outside of the study area. VMT per service population is utilized to normalize VMT into a standard unit for comparison purposes while accounting for the population and/or employment in a given area. To determine whether or not there is a potentially significant impact, the analysis shall compare the project-generated VMT to the VMT that is forecast to be generated from approved general plan growth and other transportation network modifications ("general plan buildout VMT"). The City has chosen general plan buildout as the basis for this threshold because the general plan was adopted through a public process to reflect the goals and values of the City. The general plan (The Fullerton Plan), adopted in 2012, includes policies and actions to facilitate infill development, a multi-modal transportation network, energy and resource efficient practices, and a reduction of greenhouse gas emissions. While accounting for growth in both population and employment, implementation of The Fullerton Plan reduces the citywide VMT per service population from 29.9 to 29.4[16]. Therefore, when a project generates a VMT per service population that exceeds the general plan buildout VMT in either the baseline year or horizon year, there is a significant impact.

---

[14] Should preparation of both a LOS-Based and VMT-Based Analysis be required, these can be prepared together in one Transportation Assessment or in separate Transportation Assessment documents at the discretion of the applicant.

[15] OCTAM is a travel demand model developed and maintained by OCTA, designed to provide a greater level of detail and sensitivity in Orange County compared to the regional model developed by the Southern California Association of Governments (SCAG) and the statewide model developed by Caltrans. It is provided to jurisdictions and traffic consultants under a modeling user agreement. Following review by Fehr & Peers of the *Technical Advisory on Evaluating Transportation Impacts in CEQA*, State of California, Governor's Office of Planning and Research, December 2018 as well as CEQA Guidelines, case law, and other relevant national guidance of model applications and forecasting, Fehr & Peers recommends that OCTAM be considered the best available model currently available to Orange County cities for SB 743 implementation. Additionally, its inputs and outputs are the framework for some of the analysis performed in the "NOCC+" tool.

[16] Source: Fehr & Peers

Project Effect on VMT

The City has selected the Boundary Method VMT[17] to capture all trips, including those trips that do not begin or end in the City (i.e. cut-through traffic) and/or displaced traffic, on the City's roadway network. VMT per service population is utilized to normalize VMT into a standard unit for comparison purposes while accounting for the population and/or employment in a given area. To determine whether or not there is a significant impact, the City proposes to compare the citywide VMT with and without the project. The City has chosen citywide VMT as the basis for this threshold because of its comprehensive geography and appropriateness for a City-wide analysis.

Analysis Scenarios & CEQA Impacts

The following analysis scenarios shall be evaluated and may be summarized in two tables (see Tables 6-1 and 6-2 for formatting). Total daily VMT per service population that exceeds the applicable comparative threshold shall be identified in **bold.** Detailed calculations shall be supplied as an appendix to the Transportation Assessment.

TABLE 6-1 PROJECT GENERATED VMT

Scenario	Average Total Daily VMT
	TAZ #
General Plan Buildout	
Baseline Year with Project	
Horizon Year with Project	

TABLE 6-2 PROJECT EFFECT ON VMT

Scenario	Average Total Daily VMT
	Citywide
Baseline Year	
Baseline Year with Project	
Horizon Year	
Horizon Year with Project	

[17] The appropriate methodology for transportation projects will be considered on a case by case basis.

Analysis Scenarios:

Project Generated VMT[18]

a. Baseline Year With Project

The project land use is added to the TAZ[19] and the average total daily VMT per service population in the baseline year, the year in which the CEQA analysis commenced, is compared to that of the general plan buildout in OCTAM.

b. Horizon Year With Project

The project land use is added to the TAZ[20] and the average total daily VMT per service population in the horizon year, a future year corresponding to the forecast used for modeling purposes, is compared to that of the general plan buildout in OCTAM.

Project Effect on VMT[21]

a. Baseline Year with Project

The project land use is added to the TAZ[22]and the change to the Citywide average total daily VMT in the baseline year is evaluated in OCTAM.

b. Horizon Year with Project

The project land use is added to the TAZ[23] and the change to the Citywide average total daily VMT in the horizon year is evaluated in OCTAM[24].

---

[18] The same model runs can be used for project-generated VMT and project effect on VMT, as long as the VMT is extracted correctly using the OD Method for project-generated VMT and the Boundary Method for project effect on VMT.

[19] The TAZ the project is added to (Project TAZ) should be empty, or have existing land uses reallocated to neighboring TAZs, when the project land use is added.

[20] The Project TAZ should be empty, or have existing land uses reallocated to neighboring TAZs, when the project land use is added. The growth in the Project TAZ should be reviewed to confirm if the Project is represented. In this case, the land use growth should be removed in the Horizon Year without Project condition.

[21] The same model runs can be used for project-generated VMT and project effect on VMT, as long as the VMT is extracted correctly using the OD Method for project-generated VMT and the Boundary Method for project effect on VMT.

[22] The TAZ the project is added to (Project TAZ) should be empty, or have existing land uses reallocated to neighboring TAZs, when the project land use is added.

[23] The Project TAZ should be empty, or have existing land uses reallocated to neighboring TAZs, when the project land use is added. The growth in the Project TAZ should be reviewed to confirm if the Project is represented. In this case, the land use growth should be removed in the Horizon Year without Project condition.

[24] For projects near the City boundary, a different boundary may be more applicable to make sure that VMT effects are not artificially truncated at the City boundary.

Mitigation Measures

When a potential significant impact is identified (as defined in Thresholds, Section 3.0), the study shall (1) identify mitigation measures to reduce VMT impacts and (2) evaluate the magnitude of the reduction and feasibility of implementation.

To mitigate VMT impacts, the following choices are available to the applicant:

1. Modify the project's built environment characteristics to reduce VMT generated by the project;
2. Implement strategies to reduce VMT generated by the project, commonly referred to at Transportation Demand Management (TDM) strategies;
3. Participate in a VMT fee program and/or VMT mitigation exchange/banking program (if available) to reduce VMT from the project or other land uses to achieve acceptable levels.

VMT reduction strategies can be quantified using currently available best practices such as the California Air Pollution Control Officers Association (CACPOA) calculation methodologies and Air Resource Board research findings. "NOCC+" includes information on the CACPOA strategies most relevant to the City and can be used to test which combination of measures can achieve the desired level of mitigation, where feasible. The City Traffic Engineer will provide a current menu of recommended strategies to the Consultant as available.

For a strategy to qualify as a feasible mitigation measure, however, the Transportation Assessment shall include a detailed description of how it would be implemented and maintained on a continuing basis. The source for the anticipated VMT reduction shall also be provided. In situations where strategies are identified that are not a commonly recognized best practice, the case study or other empirical data supporting the proposed VMT reduction shall be provided as an attachment to the Transportation Assessment.

Additional VMT Analysis

OCTA

At this time there is no additional VMT analysis required by OCTA.

The Consultant shall consult OCTA for updates on their requirements.

Caltrans

At this time there is no additional VMT analysis required by Caltrans.

The Consultant shall consult Caltrans for updates on their requirements.

Active Transportation and Public Transit Analysis

The CEQA Guidelines include the analysis of a project to evaluate if it conflicts with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Separate from VMT, the Transportation Assessment must include an analysis of a project to examine if it is consistent with adopted policies, plans, or programs regarding active transportation or public transit facilities, or otherwise increases or decreases the performance or safety of such facilities and make a determination as to whether it has the potential to conflict with existing or proposed facilities supporting these travel modes.

When a potential significant impact is identified, the Transportation Assessment shall (1) identify mitigation measures to reduce the active transportation and/or public transit impacts and (2) evaluate the magnitude of the reduction and feasibility of implementation.

Site Access Analysis

Based on the land use and/or location the Transportation Assessment may also include any of the following evaluations, or as otherwise specified by the City Traffic Engineer[25]:

- Curb radii, including corner cutoffs, for adequacy of turning maneuvers,
- Pocket storage lengths at driveways and/or site adjacent intersection(s) for adequacy of queuing,
- Site distance at project driveways for adequacy of vision clearance, and/or
- Potential tuning conflicts between driveways and/or driveway(s) to street(s).

Construction-Related Traffic Impacts

The CEQA Guidelines include the analysis of a project to evaluate if it impairs the implementation of or physically interferes with an adopted emergency response plan or emergency evacuation plan, substantially increases transportation hazards, or results in inadequate emergency access.

The Transportation Assessment shall identify the number of daily trips associated with heavy construction vehicles and the duration servicing the site. The Consultant shall coordinate with the City Traffic Engineer on the suitable route(s) for construction vehicles based on truck routes and other relevant information.

The Transportation Assessment shall also identify construction activities that will require the closure of one or more lanes of traffic.

When a potential significant impact is identified, the Transportation Assessment shall identify mitigation measures such as the identification of specific travel routes and/or the preparation of Traffic Control Plans.

---

[25] Prior to the beginning of the Transportation Assessment, the Consultant shall coordinate with the City Traffic Engineer on the components of the site access analysis, if required.

SR 57; 20.005
SR 90; 5.567

Dear Ms. Vander Dussen,

Thank you for including the California Department of Transportation (Caltrans) in the review of the Notice of Preparation (NOP), for the Brea Plaza Hotel and Apartments Expansion Project, in the City of Brea. The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability.

The proposed project is a mixed-use project that would result in demolition of the existing 1,100-seat theater, 7,500 square feet of restaurant space, and 149 surface parking spaces and the subsequent development of a five- to six-story L-shaped structure with 194 residential units (including co-living units); 150 hotel rooms; 5,019 square feet of restaurant space; 17,863 square feet of co-working office space; and a 342,275-square-foot parking garage on 3.8 acres in the northwestern portion of the Brea Plaza Shopping Center site. The proposed project would result in a net increase of 194 residential units and 150 hotel rooms, and a net decrease of 3,068 square feet of commercial space. Approval of the project would require a general plan amendment and zone change from General Commercial to Mixed Used II, the applicant would submit a request for a development agreement.

The Brea Plaza Shopping Center-1639 East Imperial Highway-encompasses approximately 16 acres in the City of Brea. The Brea Plaza Shopping Center is east of State Route 57 (SR 57) and is generally bounded by the Mercury Insurance office development to the north, South Associated Road and a single-

family residential neighborhood to the east, Imperial Highway/SR 90, and commercial development in the City of Fullerton to the south, and SR 57 to the west. Both SR 57 and SR 90 are overseen by Caltrans, and as a responsible agency, Caltrans has the following comment:

Traffic Operations Comments:

1. Impacts to Caltrans facilities should be analyzed using Caltrans' Vehicle Miles Traveled-Focused Transpiration Impact Study Guide (May 20, 2020).

2. A safety analysis approach that reduces risks to all road users for this project is requested. The approach is outlined in Caltrans' INTERIM LAND DEVELOPMENT AND INTERGOVERNMENTAL REVIEW (LDIGR) SAFTY REVIEW PRACTIONERS GUIDANCE (JULY 2020).

3. Access to the project site is provided from a driveway along Imperial Hwy. Movements to/from the driveway are WB right-in, SB right-out, and NB through (from NB SR 57 off-ramp). The driveway is approximately 150 feet from the NB SR 57 on-ramp from WB Imperial Hwy. The project site SB right-out provides two right turn lanes; the inside lane turns into WB Imperial HWY and onto a lane that drops at the NB SR 57 on-ramp. This creates a short weave that needs to be analyzed with impacts from proposed project.

4. Caltrans has had requests from both the City of Brea and motorists regarding the lane assignments from the off-ramp. Drivers become confused/not aware of the movement required. We have updated signage, but proposed redevelopment may exacerbate condition and should be analyzed.

5. Please note that per the HDM (Index 504.8 Access Control): For new construction or major reconstruction, access rights shall be acquired on the opposite side of the local road from ramp terminals to preclude driveways or local roads within the ramp intersection.

Systems Planning

6. Include discussions on Active Transportation (i.e., bicycle and pedestrian) and transit impacts of the proposed project. There are several bicycle

facilities and transit stops in the project vicinity, including an existing Class II bike lane on Associated Road, directly adjacent to the project site.

a. The existing Class II bike lane on Associated Road connects to other nearby bicycle facilities, such as the Class I Brea Trail and the Class II bike lane on Birch Street, both of which are just north of the project site. Enhancing connections to the Class II bike lane on Associated Road ensures regional connectivity to county bikeways.
b. Connections to nearby bicycle and transit facilities promote improved first- and last-mile infrastructure. First- and last-mile infrastructure encourages residents to utilize multimodal modes of transportation, thus improving congestion, air quality, public health, regional connectivity, and safety.

7. Coordinate with Caltrans on Complete Streets improvements in the project vicinity. Caltrans supports the design of Complete Streets that include high-quality pedestrian, bicycle, and transit facilities that are safe and comfortable for users of all ages and abilities. Improvements may include pedestrian-oriented LED lighting and continental crosswalk striping. Complete Streets improvements also promote regional connectivity, improve air quality and public health, reduce congestion, promote improved first-/last-mile connections, and increase safety for all modes of transportation.

8. As part of state goals to increase active transportation, Caltrans recommends the inclusion of secure and functional short- and long-term bike parking. Short-term bike parking at public/commercial locations should be placed in visible areas that are close to main entrances and should be installed at least 24" away from walls and other objects (e.g. trash cans, plants, etc.). Long-term bike storage for residential units should be provided indoors and on the ground floor. Both short- and long-term bike parking should be designed to accommodate different types of bikes (e.g. cargo bike, bike with trailer).

9. For additional guidance on providing functional bike parking, see the "Essentials of Bike Parking" guidance created by the Association of Pedestrian and Bicycle Professionals (link to online PDF: https://www.apbp.org/Publications).

10. Please incorporate TDM Measures into the project to mitigate transportation impacts, which may include but are not limited to:

a. Addition of bicycle lanes to support the ingress/egress of the project site;
b. Employee transit subsidies and benefits; and flexible work schedules;
c. Parking priority for carpool vans; and
d. Facilities accommodating toward carsharing and bikesharing.

11. Please submit any impending Transportation Impact Study/Assessment (TIS/TIA) to Caltrans for review and comment. Caltrans would like for this transportation analysis document to include Caltrans intersections that may be impacted by the proposed project.

Transportation and Freight Planning

12. Please make sure the DEIR includes a discussion relating to the City's Multimodal Mobility Strategies such as Transit and Connectivity. We encourage the City to look at transit mobility opportunities to connect current/existing bus services to include nearby train stations connectivity for Metrolink and Amtrak Pacific Surfliner rail services. These rail services provide both commuter regional and interregional/intercity rail services.

13. Please encourage the use of transit among future residents, visitors, and workers of the development. Increasing multimodal transportation will lead to a reduction to congestion, Vehicle Miles Traveled, and improve air quality.

14. Please provide adequate wayfinding signage to transit stops within the project vicinity and local roadways.

15. Please consider incorporating designated areas/parking for freight delivery, package and transportation network companies pick up and drop off in the site plan design for this project.

Advanced Planning

16. The proposed improvement will create an increase in traffic circulation within the vicinity of the development and impacts both SR-90 and SR-57. Coordinate all efforts with Caltrans Project Manager and Asset Manager to minimize impacts to the traveling public.

Environmental/NPDES Compliance

17. Caltrans NPDES Storm Water Unit would like to see the proposed development's temporary and permanent water quality impacts. Please identify any impacts to Caltrans right-of-way in the upcoming Draft EIR.

Permits:

18. Any project work proposed in the vicinity of the State right of way will require an encroachment permit, and all environmental concerns must be adequately addressed. Please coordinate with Caltrans in order to meet the requirements for any work within or near State Right-of-Way. A fee may apply. If the cost of work within the State right of way is below one Million Dollars, the Encroachment Permit process will be handled by our Permits Branch; otherwise the permit should be authorized through the Caltrans's Project Development Department. When applying for Encroachment Permit, please incorporate all Environmental Documentation, SWPPP/ WPCP, Hydraulic Calculations, R/W certification and all relevant design details including design exception approvals. For specific details for Encroachment Permits procedure, please refer to the Caltrans's Encroachment Permits Manual. The latest edition of the Manual is available on the web site: http://www.dot.ca.gov/hq/traffops/developserv/permits/

Please continue to coordinate with Caltrans for any future developments that could potentially impact State transportation facilities. If you have any questions, do not hesitate to contact Julie Lugaro at Julie.lugaro@dot.ca.gov.

Sincerely,

SCOTT SHELLEY

Subject: **Notice of Preparation and Scoping Meeting for the Brea Plaza Hotel and Apartments Expansion Project**

Dear Ms. Vander Dussen:

Thank you for providing the Orange County Transportation Authority (OCTA) with the Notice of Preparation (NOP) and scoping meeting for the Brea Plaza Hotel and Apartments Expansion Project. The following comments are provided for your consideration:

- The California Environmental Quality Act (CEQA) now uses vehicle miles traveled to identify transportation impacts. However, OCTA does require level of service analysis to monitor Congestion Management Program (CMP) highway system (HS) performance, per the CMP traffic impact analysis requirements. Such analysis may be submitted to OCTA separately from any CEQA documents. For more information, please refer to the 2019 CMP report available here: http://www.octa.net/Projects-and-Programs/Plans-and-Studies/Congestion-Management-Program/Overview/

- Please note that State Route 90 (SR-90) is part of the CMPHS. Additionally, the Imperial Highway/northbound ramps, Imperial Highway/southbound ramps, and SR-90/State College Boulevard intersections are CMP intersections. This roadway and these intersections should be analyzed as such for any potential traffic impacts consistent with the Orange County CMP.

Throughout the development of this project, we encourage communication with OCTA on any matters discussed herein. If you have any questions or comments, please contact me at (714) 560-5683 or clarwood@octa.net.

Sincerely,

Charlie Larwood
Department Manager, Transportation Planning

RE: Notice of Scoping Meeting & Preparation of a Draft Environmental Impact Report for the Brea Plaza Hotel and Apartments Expansion Project

Dear Ms. Vander Dussen,

On behalf of the Southwest Regional Council of Carpenters ("**Commenter**" or "**Carpenters**"), my Office is submitting these comments on the City of Brea's ("**City**" or "**Lead Agency**") Notice of Preparation of an Environmental Impact Report ("**NOP**") (SCH No. 2020079022) for the Brea Plaza Hotel and Apartments Expansion Project, which proposes to 194 residential units, 150 hotel rooms, 5,019 square feet of restaurant space, 17,863 square feet of co-working space, and a 342,275 square foot parking garage on 3.8 acres in the northwestern portion of the Brea Plaza Shopping Center site in the City of Brea. ("**Project**").

The Southwest Carpenters is a labor union representing 50,000 union carpenters in six states, including in southern California, and has a strong interest in well ordered land use planning and addressing the environmental impacts of development projects.

Individual members of the Southwest live, work and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

Commenter expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearings and proceedings related to this Project. Cal. Gov. Code § 65009(b); Cal. Pub. Res. Code § 21177(a); *Bakersfield Citizens*

for Local Control v. Bakersfield (2004) 124 Cal. App. 4th 1184, 1199-1203; see *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal. App. 4th 1109, 1121.

Commenter incorporates by reference all comments raising issues regarding the environmental impact report ("**EIR**") submitted prior to certification of the EIR for the Project. *Citizens for Clean Energy v City of Woodland* (2014) 225 CA4th 173, 191 (finding that any party who has objected to the Project's environmental documentation may assert any issue timely raised by other parties).

Moreover, Commenter requests that the Lead Agency provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act ("**CEQA**"), Cal Public Resources Code ("**PRC**") § 21000 *et seq*, and the California Planning and Zoning Law ("**Planning and Zoning Law**"), Cal. Gov't Code §§ 65000–65010. California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

The City should require the Applicant to provide additional community benefits such as requiring local hire and paying prevailing wages to benefit the City. Moreover, it would be beneficial for the City to require the Applicant to hire workers: (1) who have graduated from a Joint Labor Management apprenticeship training program approved by the State of California, or have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state approved apprenticeship training program and; (2) who are registered apprentices in an apprenticeship training program approved by the State of California.

In addition, the City should require the Project to be built to standards exceeding the current 2019 California Green Building Code and 2020 County of Los Angeles Green Building Standards Code to mitigate the Project's environmental impacts and to advance progress towards the State of California's environmental goals.

I. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

CEQA has two basic purposes. First, CEQA is designed to inform decision makers and the public about the potential, significant environmental effects of a project. 14

California Code of Regulations ("**CCR**" or "**CEQA Guidelines**") § 15002(a)(1).[1] "Its purpose is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR 'protects not only the environment but also informed self-government.' [Citation.]" *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553, 564. The EIR has been described as "an environmental 'alarm bell' whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return." *Berkeley Keep Jets Over the Bay v. Bd. of Port Comm'rs.* (2001) 91 Cal. App. 4th 1344, 1354 (*"Berkeley Jets"*); *County of Inyo v. Yorty* (1973) 32 Cal. App. 3d 795, 810.

Second, CEQA directs public agencies to avoid or reduce environmental damage when possible by requiring alternatives or mitigation measures. CEQA Guidelines § 15002(a)(2) and (3). *See also, Berkeley Jets,* 91 Cal. App. 4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Ass'n v. Regents of the University of California* (1988) 47 Cal. 3d 376, 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to "identify ways that environmental damage can be avoided or significantly reduced." CEQA Guidelines § 15002(a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns" specified in CEQA section 21081. CEQA Guidelines § 15092(b)(2)(A–B).

While the courts review an EIR using an "abuse of discretion" standard, "the reviewing court is not to 'uncritically rely on every study or analysis presented by a project proponent in support of its position.' A 'clearly inadequate or unsupported study is entitled to no judicial deference.'" *Berkeley Jets*, 91 Cal. App. 4th 1344, 1355 (emphasis added) (quoting *Laurel Heights,* 47 Cal.3d at 391, 409 fn. 12). Drawing this line and determining whether the EIR complies with CEQA's information disclosure

[1] The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 150000 et seq, are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. (Cal. Pub. Res. Code § 21083.) The CEQA Guidelines are given "great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous." *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal. 4th 204, 217.

requirements presents a question of law subject to independent review by the courts. (*Sierra Club v. Cnty. of Fresno* (2018) 6 Cal. 5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131.) As the court stated in *Berkeley Jets*, 91 Cal. App. 4th at 1355:

> A prejudicial abuse of discretion occurs "if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process.

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. The EIR's function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449–450).

B. Due to the COVID-19 Crisis, the City Must Adopt a Mandatory Finding of Significance that the Project May Cause a Substantial Adverse Effect on Human Beings and Mitigate COVID-19 Impacts

CEQA requires that an agency make a finding of significance when a Project may cause a significant adverse effect on human beings. PRC § 21083(b)(3); CEQA Guidelines § 15065(a)(4).

Public health risks related to construction work requires a mandatory finding of significance under CEQA. Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.[2]

[2] Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx.

SWRCC recommends that the Lead Agency adopt additional CEQA mitigation measures to mitigate public health risks from the Project's construction activities. SWRCC requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon SWRCC's experience with safe construction site work practices, SWRCC recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.

- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that

meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.[3]

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

If the City has any questions or concerns, feel free to contact my Office.

Sincerely,

Mitchell M. Tsai
Attorneys for Southwest Regional
Council of Carpenters

Subject: Re: Follow up to phone call regarding question for the Brea Plaza Hotel Project

Ms. Lugaro,

The proposed Brea Plaza Project, as submitted by the applicant, does not call for any modifications of the Caltrans owned and operated Imperial Highway & CA-57 Northbound Off-Ramp traffic signal nor the driveway across from the freeway off-ramp. The City Traffic Engineer also checked with the traffic consultant performing the CEQA required VMT Assessment Study and the non-CEQA Traffic Operational Assessment Study and they indicated that the preliminary study results do not suggest that any physical or operational changes will be required at the driveway or the ramp signal. Therefore, based on our current understanding of the project, environmental and operational studies underway, and potential City required conditions of approval, the applicant is unlikely to require a Caltrans permit for modification of the driveway or the traffic signal in question.

Please let me know if you have additional questions. We look forward to working with you when the traffic analyses are complete.

Regards,

Sheri Vander Dussen

Subject: Follow up to phone call regarding question for the Brea Plaza Hotel Project

Hello Sheri,

This is a follow-up to the voice mail I left for you regarding the Brea Plaza Hotel.
As I mentioned, Caltrans has a question regarding: "if there is a permit for the driveway along Imperial Hwy (across the NB SR 57 off ramp)"?

Also, please note that:

Per the HDM (Index 504.8 Access Control): "For new construction or major reconstruction, access rights shall be acquired on the opposite side of the local road from ramp terminals to preclude driveways or local roads within the ramp intersection."

So we believe that there will be permit requests in the future regarding the project, if they have not been submitted already.

Please let us know the status of the driveway permit, and any future permits that will be submitted for this project.

Thank you,

Julie Lugaro, M.S.

1. Introduction

1.1 PURPOSE OF MITIGATION MONITORING PROGRAM

This Mitigation Monitoring Program (MMP) has been developed to provide a vehicle by which to monitor mitigation measures and conditions of approval outlined in the Draft Environmental Impact Report (DEIR), State Clearinghouse No. 2020079022. The Mitigation Monitoring Program has been prepared in conformance with Section 21081.6 of the Public Resources Code and City of Brea Monitoring Requirements. Section 21081.6 states:

> (a) When making findings required by paragraph (1) of subdivision (a) of Section 21081 or when adopting a mitigated negative declaration pursuant to paragraph (2) of subdivision (c) of Section 21080, the following requirements shall apply:
>
> (1) The public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during project implementation. For those changes which have been required or incorporated into the project at the request of a responsible agency or a public agency having jurisdiction by law over natural resources affected by the project, that agency shall, if so requested by the lead or responsible agency, prepare and submit a proposed reporting or monitoring program.
>
> (2) The lead agency shall specify the location and custodian of the documents or other material which constitute the record of proceedings upon which its decision is based.

1.2 PROJECT LOCATION

The proposed project would be on 2.2 acres in the northwest portion of the Brea Plaza Shopping Center—1639 East Imperial Highway—which encompasses approximately 16 acres in Brea. The Brea Plaza Shopping Center is bounded by the Mercury Insurance office development to the north, South Associated Road and a single-family residential neighborhood to the east, Imperial Highway/State Route 90 (SR-90) and commercial development in Fullerton to the south, and SR-57 to the west.

1.3 PROJECT DESCRIPTION

The proposed project would require the demolition of the 18,450-square-foot Brea Plaza 5 Cinemas (1,110 seats), and 139 surface parking spaces, and subsequent development of an L-shaped building on approximately 2.2 acres in the northwestern portion of the 16-acre Brea Plaza Shopping Center to accommodate the proposed residential and office uses and parking. The proposed project would result in a net increase of 189 residential units, 387 parking spaces (plus 10 tandem stalls), and a reduction of 2,905

commercial square feet on the 2.2-acre portion of the 16-acre site. Figure ES-4, *Conceptual Site Plan,* shows the overall conceptual site plan including office and residential uses, and parking. The proposed project would require a general plan amendment, a zone change from General Commercial (C-G) to Mixed Use II, and a variance; the applicant would submit a request for a development agreement. Additionally, the proposed project would include rental cars for the use by apartment residents and office tenants; create a rideshare waiting area; have rental bicycles available for use; and include a free Intra-Brea Transportation System for use by all people working, visiting, and living in Brea.

1.4 ENVIRONMENTAL IMPACTS

1.4.1 Impacts Considered No Impact or Less Than Significant

The EIR identified various thresholds from the CEQA Guidelines among a number of environmental categories that would not be significantly impacts by the proposed project in Chapter 5, *Environmental Analysis*, and Chapter 8, *Impacts Found Not to Be Significant*, and therefore, did not require mitigation. Impacts to the following environmental resources were found to be less than significant or no impact:

- Aesthetics
- Air Quality
- Agriculture and Forestry Resources
- Biological Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation
- Utilities and Service Systems
- Wildfire

1.4.2 Potentially Significant Adverse Impacts That Can Be Mitigated, Avoided, or Substantially Lessened

The EIR concluded that the proposed project could result in one or more potentially significant impacts in the following topic areas:

- Cultural and Paleontological Resources
- Tribal Cultural Resources

However, the EIR also found that these impacts would be reduced, avoided, or substantially lessened through the implementation of mitigation measures, which are listed in Table 1, *Mitigation Monitoring Requirements*.

1.4.3 Unavoidable Significant Adverse Impacts

The EIR did not identify any significant and unavoidable impacts.

2. Mitigation Monitoring Requirements

2.1 CATEGORIZED MITIGATION MEASURES/MATRIX

Project-specific mitigation measures (MM) and plans, programs, and policies (PPPs) have been categorized in matrix format, as shown in Table 1. The matrix identifies the environmental factor, specific mitigation measures, schedule, and responsible monitor. The mitigation matrix will serve as the basis for scheduling the implementation of, and compliance with, all mitigation measures.

2. Mitigation Monitoring Requirements

This page intentionally left blank.

2. Mitigation Monitoring Requirements

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
AESTHETICS					
PPP AES-1	The proposed project is required to provide a minimum landscaped coverage of 15 percent of the net site area in accordance with municipal code Section 20.258.020, General Development Standards for the Mixed-Use Zoning Districts.	Project Applicant	Prior to issuance of building permits.	City of Brea Planning Division	
PPP AES-2	For parking areas, the proposed project is required to maintain an equivalent of one foot-candle of illumination on the average throughout the parking area. The lighting is required to be on a time-clock or photo-sensor system. The lighting shall be designed to confine direct rays to the premises. No spillover beyond the property line shall be permitted in accordance with municipal code Section 20.08.040(C)(5), Lighting.	Project Applicant	Prior to issuance of building permits.	City of Brea Planning Division	
PPP AES-3	All lighting, interior and exterior, shall be designed and located so as to confine all direct rays to the premises in accordance with municipal code Section 20.220.040(L), Lighting. Lighting for nonresidential uses shall be appropriately designed, located, and shielded to ensure that they do not negatively impact the residential uses in compliance with Section 20.08.040(C)(5).	Project Applicant	Prior to issuance of building permits.	City of Brea Planning Division	
PPP AES-4	Signs shall be located in a manner to ensure that sight distance is not impaired at any locations for vehicular traffic to and from the premises, in accordance with municipal code Section 20.28, Signs. The Brea Plaza comprehensive sign program will be amended, subject to Planning Commission approval. The proposed digital signage for the Brea Plaza Shopping Center on the southern façade of the structure requires review by the Planning Commission to ensure that its size, location, movement, content, coloring, or manner of illumination does not constitute a traffic hazard or a detriment to traffic safety by obstructing the vision of drivers, or detracting from the visibility of any official traffic control device, or by diverting or tending to divert the attention of drivers of moving vehicles from the traffic movement on the public streets and highway. Pursuant to Municipal Code Section 20.28.230, Sign Illumination, the approval of any illuminated sign shall not be final until 30 days after installation, during which period the Development Services Director or his or her designee may order the dimming of any illumination found to be excessively brilliant.	Project Applicant	Prior to issuance of building permits.	City of Brea Planning Division	

2. Mitigation Monitoring Requirements

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
PPP AES-5	Loading areas for nonresidential uses shall be located as far as possible from residential units and shall be completely screened from view from the residential portion of the project and streets, in compliance with subsections 20.236.040(E), Walls and Fences, and 20.220.040(F), Fences, Walls, and Hedges, and subparagraph K. Screening and buffering standards for loading areas shall be compatible in architectural design and details with the overall project. The location and design of loading areas shall mitigate nuisances from odors when residential uses might be impacted, in accordance with subsection 20.258.030(I)(3), Loading Areas..	Project Applicant	Prior to issuance of building permits.	City of Brea Planning Division	
PPP AES-6	Recycling and refuse storage facilities for nonresidential uses shall be as far as possible from residential units and shall be completely screened from view from the residential portion of the project and streets in compliance with the standards in subsections 20.236.040(E), Walls and Fences, and 20.220.040(F), Fences, Walls, and Hedges, and subparagraph K, Screening and Buffering. Recycling and refuse storage facilities for nonresidential uses should be compatible in architectural design and details with the overall project. The location and design of trash enclosures shall mitigate nuisances from odors when residential uses might be impacted, in accordance with the standards in subsection 20.258.030(J), Recycling and Refuse Storage Facilities.	Project Applicant	Prior to issuance of building permits.	City of Brea Planning Division	
PPP AES-7	In accordance with Section 20.258.030(D), Specific Development Standards for all Mixed-Use Projects, of the Brea Municipal Code, the architectural style and use of quality materials shall be consistent throughout the entire project; however, differences in architectural details and/or materials may occur to differentiate between the nonresidential and residential portions of the project.	Project Applicant	Prior to issuance of building permits.	City of Brea Planning Division	

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
PPP AES-8	In accordance with Section 20.258.030(D)(3.F), Specific Development Standards for all Mixed-Use Projects, of the Brea Municipal Code, the design of the residential portion of the project shall be consistent with the design guidelines for multi-family residential development. In accordance with Section 20.258.030(A)(2), Specific Development Standards for all Mixed-Used Projects MU-I Zoning Districts, of the Brea Municipal Code, nonresidential and residential uses shall be vertically integrated whenever possible; however, stand-alone residential projects and stand-alone nonresidential projects are allowed when planned and designed as an integrated element of a larger mixed-use development area.	Project Applicant	Prior to issuance of building permits.	City of Brea Planning Division	
AIR QUALITY					
PPP AIR-1	New buildings are required to achieve the current California Building Energy and Efficiency Standards (Title 24, Part 6) and California Green Building Standards Code (CALGreen) (Title 24, Part 11). The 2019 Building and Energy Efficiency Standards became effective January 1, 2020. The Building Energy and Efficiency Standards and CALGreen are updated tri-annually with a goal for nonresidential buildings to achieve zero net energy by 2030.	Project Applicant	Prior to issuance of building permits.	City of Brea Building and Safety Division	
PPP AIR-2	New buildings are required to adhere to the California Green Building Standards Code (CALGreen) requirement to provide bicycle parking for new nonresidential buildings, or meet local bicycle parking ordinances, whichever is stricter (CALGreen Sections 5.106.4.1, 14.106.4.1, and 5.106.4.1.2)..	Project Applicant	Prior to issuance of building permits.	City of Brea Building and Safety Division	
PPP AIR-3	New buildings are required to adhere to the California Green Building Standards Code (CALGreen) requirement to provide regularly occupied areas of the building with air filtration media for outside and return air that provides at least a Minimum Efficiency Reporting Value (MERV) of MERV 13 filters (CALGreen Section 5.504).	Construction contractor	During construction activities	City of Brea Building and Safety Division	
PPP AIR-4	Construction activities will be conducted in compliance with California Code of Regulations Title 13 Section 2449, which requires that nonessential idling of construction equipment is restricted to five minutes or less.	Construction contractor	During construction activities	City of Brea Building and Safety Division	

2. Mitigation Monitoring Requirements

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
PPP AIR-5	Construction activities will be conducted in compliance with any applicable South Coast Air Quality Management District rules and regulations, including but not limited to: • Rule 403, Fugitive Dust, for controlling fugitive dust and avoiding nuisance. • Rule 402, Nuisance, which states that a project shall not "discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property." • Rule 1113, which limits the volatile organic compound content of architectural coatings.	Construction contractor	During construction activities	City of Brea Building and Safety Division	
BIOLOGICAL RESOURCES					
PPP BIO-1	In compliance with the California Fish and Game Code, birds and their active nests are protected; therefore, the trees on-site would be removed outside of the nesting season, either prior to February 15 or after August 15.	Project Applicant	During site preparation and grading activities.	City of Brea Building and Safety Division	
CULTURAL AND PALEONTOLOGICAL RESOURCES					
PPP CUL-1	Native American historical and cultural resources and sacred sites are protected under PRC Sections 5097.9 to 5097.991, which require that descendants be notified when Native American human remains are discovered and provide for treatment and disposition of human remains and associated grave goods.	Qualified Archaeologist and Project Applicant	Prior to issuance of grading permits and during construction activities	City of Brea Planning Division	
PPP CUL-2	The removal, without permission, of any paleontological site or feature is prohibited from lands under the jurisdiction of the state or any city, county, district, authority, or public corporation or any agency thereof (PRC Section 5097.5). This applies to agencies' own activities, including construction and maintenance, and permit actions by others.	Qualified Archaeologist and Project Applicant	Prior to issuance of grading permits and during construction activities	City of Brea Planning Division	

2. Mitigation Monitoring Requirements

Table 1 Mitigation Monitoring Requirements

Mitigation Measure		Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
PPP CUL-3	Adverse impacts to paleontological resources from developments on public lands (state, county, city, and district) require reasonable mitigation. (PRC Section 5097.5)	Qualified Archaeologist and Project Applicant	Prior to issuance of grading permits and during construction activities	City of Brea Planning Division	
PPP CUL-4	If human remains are discovered within a project site, disturbance of the site must stop until the coroner has investigated and made recommendations for the treatment and disposition of the human remains to the person responsible for the excavation, or to his or her authorized representative. If the coroner has reason to believe the human remains are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission. (California Health and Safety Code Section 7050.5)	Tribal Monitor, Qualified Archaeologist, and Project Applicant	During site-grading activities	City of Brea Planning Division, Project Applicant	
CUL-1	If cultural resources are encountered during ground-disturbing activities, work in the immediate area shall cease, and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983) shall be contacted immediately to evaluate the find(s). If the discovery proves to be significant under CEQA, additional work such as data recovery excavation may be warranted and will be reported to the City.	Qualified Archaeologist and Project Applicant	During ground disturbing activities	City of Brea Planning Division	
CUL-2	Monitoring of mass grading and excavation activities in the areas identified as likely to contain paleontological resources by a qualified paleontologist. A paleontologist shall be on call in the event that paleontological resources are found during ground-disturbing activities. The paleontologist shall be equipped to salvage fossils as they are unearthed to avoid construction delays and to remove samples of sediments that are likely to contain the remains of small fossils. The paleontologist shall be empowered to temporarily halt or divert equipment to allow for the removal of abundant or large specimens in a timely manner.	Qualified Paleontologist and Project Applicant	During ground disturbing activities	City of Brea Planning Division	

2. Mitigation Monitoring Requirements

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
ENERGY					
PPP E-1	New buildings are required to achieve the current California Building Energy Efficiency Standards (Title 24, Part 6) and California Green Building Standards Code (CALGreen) (Title 24, Part 11). The 2019 Building Energy Efficiency Standards became effective on January 1, 2020. The Building Energy Efficiency Standards and CALGreen are updated tri-annually with a goal to achieve zero net energy for residential buildings by 2020 and non-residential buildings by 2030.	Project Applicant	Prior to issuance of building permits.	City of Brea Engineering Division	
PPP E-2	New buildings are required to adhere to the California Green Building Standards Code (CALGreen) requirement to provide bicycle parking for new non-residential buildings, or meet local bicycle parking ordinances, whichever is stricter (CALGreen Sections 5.106.4.1, 14.106.4.1, and 5.106.4.1.2).	Project Applicant	Prior to issuance of building permits.	City of Brea Building and Safety Division	
PPP E-3	California's Green Building Standards Code (CALGreen) requires the recycling and/or salvaging for reuse at minimum of 65 percent of the nonhazardous construction and demolition waste generated during most "new construction" projects (CALGreen §§ 4.408 and 5.408). Construction contractors are required to submit a construction waste management plan that identifies the construction and demolition waste materials to be diverted from disposal by recycling, reuse on the project, or salvaged for future use or sale and the amount (by weight or volume).	Project Applicant	Prior to issuance of building permits and during construction.	City of Brea Engineering Department	
PPP E-4	Construction activities are required to adhere to Title 13 California Code of Regulations Section 2499, which requires that nonessential idling of construction equipment is restricted to five minutes or less.	Project Applicant	Prior to issuance of building permits.	City of Brea Building and Safety Division	
PPP E-5	New buildings are required to adhere to the California Green Building Standards Code and Water Efficient Landscape Ordinance requirements to increase water efficiency and reduce urban per capita water demand.	Project Applicant	Prior to issuance of building permits.	City of Brea Building and Safety Division	

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
PPP E-6	The California Air Resources Board's Renewable Portfolio Standard (RPS) is a foundational element of the State's emissions reduction plan. These mandates apply directly to investor-owned utilities, which in the case of the proposed project is Southern California Edison. On September 10, 2018, Senate Bill 100 was signed into law and established the following RPS targets: 50 percent renewable resources target by December 31, 2026, and 60 percent target by December 31, 2030. SB 100 also requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours of those products sold to their retail end-use customers achieve 44 percent of retail sales by December 31, 2024; 52 percent by December 31, 2027; and 60 percent by December 31, 2030.	Not Applicable	Not Applicable	Not Applicable	Not Applicable
PPP E-7	The 2007 Energy Bill creates new federal requirements for increases in fleetwide fuel economy for passenger vehicles and light trucks under the Federal Corporate Average Fuel Economy Standards. The federal legislation requires a fleetwide average of 35 miles per gallon (mpg) to be achieved by 2020. The National Highway Traffic Safety Administration is directed to phase in requirements to achieve this goal. Analysis by the California Air Resources Board suggests that this will require an annual improvement of approximately 3.4 percent between 2008 and 2020.	Not Applicable	Not Applicable	Not Applicable	Not Applicable
PPP E-8	SB 375 requires the reduction of GHG emissions from light trucks and automobiles through land use and transportation efforts that will reduce vehicle miles traveled. In essence, SB 375's goal is to control GHGs by curbing urban sprawl and through better land use planning. SB 375 essentially becomes the land use contribution to the GHG reduction requirements of AB 32, California's global warming bill enacted in 2006, and SB 32.	Not Applicable	Not Applicable	Not Applicable	Not Applicable

2. Mitigation Monitoring Requirements

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
GREENHOUSE GAS EMISSIONS					
PPP GHG-1	New buildings are required to achieve the current California Building Energy Efficiency Standards (Title 24, Part 6) and California Green Building Standards Code (CALGreen) (Title 24, Part 11). The 2019 Building Energy Efficiency Standards will become effective on January 1, 2020. The Building Energy Efficiency Standards and CALGreen are updated tri-annually with a goal to achieve zero net energy for residential buildings by 2020 and non-residential buildings by 2030.	Project Applicant	Prior to issuance of building permits.	City of Brea Engineering Division	
PPP GHG-2	New buildings are required to adhere to the California Green Building Standards Code (CALGreen) requirement to provide bicycle parking for new nonresidential buildings, or meet local bicycle parking ordinances, whichever is stricter (CALGreen §§ 5.106.4.1, 14.106.4.1, and 5.106.4.1.2). Development of the project would require provision of anchored bicycle racks and long-term secured bicycle parking.	Project Applicant	Prior to issuance of building permits.	City of Brea Engineering Division	
PPP GHG-3	California's Green Building Standards Code (CALGreen) requires the recycling and/or salvaging for reuse at minimum of 65 percent of the nonhazardous construction and demolition waste generated during most "new construction" projects (CALGreen §§ 4.408 and 5.408). Construction contractors are required to submit a construction waste management plan that identifies the construction and demolition waste materials to be diverted from disposal by recycling, reuse on the project, or salvaged for future use or sale and the amount (by weight or volume).	Project Applicant	Prior to issuance of building permits and during construction.	City of Brea Engineering Division	
PPP GHG-4	Construction activities are required to adhere to California Code of Regulations, Title 13, Section 2449, which requires that nonessential idling of construction equipment be restricted to five minutes or less.	Project Applicant and Project Construction Contractor	During construction and operations	City of Brea Engineering Division	
PPP GHG-5	New buildings are required to adhere to the California Green Building Standards Code and Water Efficient Landscape Ordinance requirements to increase water efficiency and reduce urban per capita water demand.	Project Applicant	Prior to issuance of building permits.	City of Brea Building and Safety Division	
LAND USE AND PLANNING					
PPP LU-1	As part of the project review process, the City of Brea is requiring that the project applicant prepare a parking study	Project Applicant	Prior to issuance of building permits.	City of Brea Planning Division	

2. Mitigation Monitoring Requirements

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
NOISE					
PPP NOI-1	Project-related construction activity will be limited to the hours of 7:00 am to 7:00 pm on weekdays and Saturdays. Construction is prohibited on Sundays.	Project Applicant	During construction activities	City of Brea Building and Safety Division	
PPP NOI-2	The project will comply with City of Brea's stationary exterior noise standards summarized above in Table 5.7-3.	Project Applicant	During operation	City of Brea Building and Safety Division	
PPP NOI-3	The project will comply with the City of Brea's vibration standards of 70 VdB at the property line of the sensitive receptor.	Project Applicant	During operation	City of Brea Building and Safety Division	
PPP NOI-4	The residential development will comply with the California Building Code (CBC), Title 24, Part 2, Volume 1, Chapter 12, Interior Environment, Section 1207.11.2, Allowable Interior Noise Levels. Non-residential development will comply with the CBC, Title 24, Building Standards Administrative Code, Part 11, CALGreen.	Project Applicant	During operation	City of Brea Building and Safety Division	
PPP NOI-5	Outdoor nonresidential uses in mixed-use projects shall be prohibited from operating between the hours of 10:00 p.m. and 7:00 a.m. in accordance with Section 20.258.030 (H)(1) Hours of Operation of the Brea Municipal Code.	Project Applicant	During operation	City of Brea Planning Division, Police Department	
PPP NOI-6	The covenants, conditions, and restrictions of a mixed-use project shall indicate the times when the loading and unloading of goods may occur on the street, provided that in no event shall loading or unloading take place after 10:00 p.m. or before 7:00 a.m. on any day of the week in accordance with Section 20.258.030 (H)(3) Loading and Unloading Activities, of the Brea Municipal Code.	Project Applicant	During operation	City of Brea Planning Division	
PPP NOI-7	Residents of a mixed-use development project shall be notified in writing before taking up residence that they will be living in an urban type of environment and that the noise levels may be higher than a typical residential area. The covenants, conditions, and restrictions of a mixed-use project shall require that the residents acknowledge their receipt of the written noise notification. Their signatures shall confirm receipt and understanding of this information in accordance with Section 20.258.030 (H)(4) Noise Notification, of the Brea Municipal Code.	Project Applicant	Prior to issuance of an occupancy permit. During leasing.	City of Brea Planning Division, Project Applicant	

2. Mitigation Monitoring Requirements

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
PPP NOI-8	Residential dwelling units shall be designed to be sound attenuated against present and future project noise. New projects or new nonresidential uses in existing projects shall provide an acoustical analysis report, by an acoustical engineer, describing the acoustical design features of the structure required to satisfy the exterior and interior noise standards in accordance with Section 20.258.030 (H)(6) Sound Mitigation, of the Brea Municipal Code.	Project Applicant	Prior to issuance of a building permit	City of Brea Building and Safety Division	
PPP NOI-9	Noise-generating equipment. Noise-generating equipment (e.g., refrigeration units, air conditioning, exhaust fans, etc.) shall require special consideration in their location and screening in order to avoid creating a nuisance in accordance with Section 20.258.030 (K)(3) Noise Generating Equipment.	Project Applicant	Prior to issuance of a building permit and during operation	City of Brea Building and Safety Division	
POPULATION AND HOUSING					
PPP POP-1	The project is required to adhere the City's Affordable Housing Ordinance (Municipal Code Chapter 20.40), which requires developers of residential projects with 20 or more units to provide 10 percent of the units for housing affordable to low- and moderate-income households or pay an in-lieu fee.	Project Applicant	Prior to issuance of an occupancy permit. During leasing.	City of Brea Planning Division, Project Applicant	
PUBLIC SERVICES					
PPP PS-1	New buildings are required to meet the fire regulations outlined in California Health and Safety Code (Sections 13000 et seq.).	Project Applicant	Prior to issuance of a building permit.	City of Brea Fire Department	
PPP PS-2	The project applicant is required to pay development impact fees (dispatch impact fees, fire impact fees, fire service fees).	Project Applicant	Prior to issuance of a building permit.	City of Brea Building and Safety Division	
PPP PS-3	As part of the project review process, the City of Brea Fire Department will require approval of Building Plan Check for Site Plan and Emergency Access as well as approval of Fire Master Plan. Additional design features to address the City of Brea Fire Department's requirements will be incorporated as conditions of approval for the project.	Project Applicant	Prior to issuance of a building permit	City of Brea Fire Department	
PPP PS-4	The project will be designed, built, and operated in accordance with the City of Brea's Municipal Code Chapter 15.08 Building Code and Chapter 16.04 Brea Fire Code.	Project Applicant	Prior to issuance of a building permit	City of Brea Building and Safety Division and Fire Department	

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
PPP PS-5	As part of the project review process, the City of Brea Fire Department may require project design features for fire safety. Additional design features to address the City of Brea Fire Department's service standards will be incorporated as conditions of approval for the project, such as funding for a new ladder truck to responsibly maintain its response requirements, provide adequate protection for this project and its intended residents, and aid in the overall execution of the Brea Fire Department's mission.	Project Applicant	Prior to issuance of an occupancy permit	City of Brea Police Department	
PPP PS-6	The project applicant is required to pay dispatch impact fees.	Project Applicant	Prior to issuance of a building permit	City of Brea Building and Safety Division	
PPP PS-7	As part of the project review process, the City of Brea Police Department may require project design features to improve security. Additional design features to address the City of Brea Police Department's service standards will be incorporated as conditions of approval for the project, such as: • ALPR (license plate reader system), • Fiber optic cable to connect to existing fiber network, • Funding for mixed mounted cameras for a citywide camera system which is currently under development.	Project Applicant	Prior to issuance of a building permit	City of Brea Police Department	
PPP PS-8	Pursuant to AB 2926, new development is required to pay development impact fees to assist in providing school facilities to serve students generated by new development.	Project Applicant	Prior to issuance of a building permit	City of Brea Building and Safety Division	
PPP PS-9	Pursuant to SB 50, new development is required to offset the costs associated with increasing school capacity, where the funds collected go to acquiring school sites, constructing new school facilities, and modernizing existing school facilities.	Project Applicant	Prior to issuance of a building permit	City of Brea Building and Safety Division	

2. Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
RECREATION					
PPP REC-1	The proposed project is required to comply with Brea Municipal Code Section 18.64.080 that establishes the subdivision regulations for the provision of park and recreational facilities through land dedication, installation of improvements, payment of in-lieu fee thereof, or a combination. New development is required to fund park and recreational development and improvements through the payment of park development fees.	Project Applicant	Prior to issuance of a building permit	City of Brea Building and Safety Division	
TRANSPORTATION					
PPP TRAF-1	The proposed project is required to pay development impact fees to the City of Brea pursuant to the City's AB 1600 Transportation Improvement Nexus Program (Ordinance 996). Based on a transportation improvement nexus program study conducted in 2011, the City Council adopted Resolution 2011-096, which updated the impact fees, effective February 4, 2012. Fair-share fees offset or mitigate the cumulative traffic impacts caused by new development. The program ensures all future development in the City of Brea contributes on a fair-share basis.	Project Applicant	Prior to issuance of a building permit	City of Brea Engineering Division	
PPP TRAF-2	Modifications to the roadway network, including driveways, curbs, and sidewalks, are subject to approval of the City of Brea. Construction work within the right-of-way of a public roadway requires the issuance of a permit by the City of Brea.	Project Applicant	Prior to issuance of a building permit	City of Brea Engineering Division	
PPP TRAF-3	The proposed project is required to implement the following bicycle safety improvements as a condition of approval. The project shall restripe the west leg of the intersection of South Associated Road at Birch Street to provide an exclude east-bound right-turn pocket. To implement this improvement, the existing traffic signal at South Associated Road and Birch Street shall be modified to allow for an eastbound right-turn overlap phase. In addition, the existing R73-5(CA) sign for the northbound left-turn lanes shall be replaced with a R73-6(CA) sign to restrict U-turns in the northbound direction.	Project Applicant and City of Brea Public Works Department	Prior to issuance of an occupancy permit	City of Brea Public Works Department	

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
TRIBAL CULTURAL RESOURCES					
PPP TCR-1	Pursuant to California Health and Safety Code Section 7050.5, if human remains are discovered on the project site, disturbance of the site shall halt and remain halted until the coroner has conducted an investigation. If the coroner determines that the remains are not subject to his or her authority and has reason to believe that they are those of a Native American, he or she shall contact the NAHC by telephone within 24 hours.	Tribal Monitor, Qualified Archaeologist, and Project Applicant	During site-grading activities	City of Brea Planning Division, Project Applicant	
TCR-1	Prior to the commencement of any ground disturbing activity at the project site, the project applicant shall retain a Native American Monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation – the tribe that consulted on this project pursuant to Assembly Bill A52 (the "Tribe" or the "Consulting Tribe"), and in concurrence with the City of Brea as the CEQA lead agency. A copy of the executed contract shall be submitted to the City of Brea Planning and Building Department prior to the issuance of any permit necessary to commence a ground-disturbing activity. • The Tribal monitor shall only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, rading, excavation, drilling, and renching, within the project area. • The Tribal Monitor shall complete daily monitoring logs that provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified. • The on-site monitoring shall be concluded when all ground-disturbing activities on the project site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the project site have little to no potential for impacting Tribal Cultural Resources.	Tribal Monitor and Project Applicant	Prior to issuance of grading permit	City of Brea Planning Division, Project Applicant	

2. Mitigation Monitoring Requirements

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
TCR-2	If tribal cultural resources are inadvertently discovered during ground disturbing activities for this project. The following procedures will be carried out for treatment and disposition of the discoveries: • Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. • All Tribal Cultural Resources unearthed by project activities shall be evaluated by the qualified archaeologist and Tribal monitor approved by the Consulting Tribe. If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. • If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). • Work may continue on other parts of the Project Site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]). If a non-Native American resource is determined by the qualified archaeologist to constitute a "historical resource" or "unique archaeological resource," time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation, must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Sections 21083.2(b) for unique archaeological resources. • Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent	Project Applicant and Qualified Archaeologist	During ground disturbing activities	City of Brea Planning Division, Project Applicant	

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
	laboratory processing and analysis. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.				
UTILITIES AND SERVICE SYSTEMS					
PPP USS-1	The project will pay the Sanitary Sewer Connection Fees collected by the City of Brea, which contribute to maintenance and installation of sewer improvements in the OCSD in accordance with Section 3.32.040, Sewer Service Fees and Charges, of the Brea Municipal Code.	Project Applicant	Prior to issuance of a building permit	City of Brea Engineering Division	
PPP USS-2	The project will pay the water impact fees and water connection fees collected by the City of Brea, which covers costs to purchase water supplies and to operate and maintain the water distribution system in accordance with Ordinance 967.	Project Applicant	Prior to issuance of a building permit	City of Brea Engineering Division	
PPP USS-3	Landscaping installed onsite shall conform to the California Green Building Standards Code and Water Efficient Landscape Ordinance requirements to increase landscape water efficiency.	Project Applicant	Prior to issuance of a building permit and during construction	City of Brea Building and Safety, Planning Division	
PPP USS-4	Plumbing fixtures installed onsite shall conform to California Green Building Standards Code requirements to increase water efficiency and reduce urban per capita water demand.	Project Applicant	Prior to issuance of a building permit and during construction	City of Brea Building and Safety	
PPP USS-5	The project would comply with the City's water conservation program during a drought or emergency situation, in accordance with Chapter 13.20, Water Management Program, of the City's Municipal Code.	Project Applicant	Prior to issuance of a building permit and during construction	City of Brea Engineering Division	

2. Mitigation Monitoring Requirements

Table 1 Mitigation Monitoring Requirements

	Mitigation Measure	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
PPP USS-6	The project will be constructed and operated in accordance with the Santa Ana Regional Water Quality Control Board Municipal Stormwater (MS4) Permit for Orange County. The MS4 Permit requires the proposed project to prepare and implement a WQMP to: • Control release of contaminants into storm drain systems. • Educate the public about stormwater impacts. • Detect and eliminate illicit discharges. • Control runoff from construction sites. • Implement BMPs and site-specific runoff controls and treatments.	Project Applicant	Prior to issuance of a building permit and during construction	City of Brea Engineering Division	
PPP USS-7	California's Green Building Standards Code (CALGreen) requires the recycling and/or salvaging for reuse a minimum of 65 percent of the nonhazardous construction and demolition waste generated during most "new construction" projects (CALGreen Sections 4.408 and 5.408). Construction contractors are required to submit a construction waste management plan that identifies the construction and demolition waste materials to be diverted from disposal by recycling, reuse on the project, or salvage for future use or sale and the amount (by weight or volume).	Project Applicant	Prior to issuance of a building permit and during construction	City of Brea Engineering Division	
PPP USS-8	The project will abide by AB 341 and AB 1826. The project will store and collect recyclable materials in compliance with AB 341. Green waste will be handled in accordance with AB 1826.	Project Applicant	Prior to issuance of a building permit and during construction	City of Brea Engineering Division

*** Total construction emissions are amortized over 30 years per SCAQMD methodology; SCAQMD. 2009, November 19. Greenhouse Gases (GHG) CEQA Significance Thresholds Working Group Meeting 14. http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-14/ghg-meeting-14-main-presentation.pdf?sfvrsn=2.

Assumptions Worksheet

CalEEMod Inputs - Brea Plaza Hotel and Apartments Expansion Project, Construction

Name:	Brea Plaza Expansion Project
Project Number:	BREA-03.5
Project Location:	1639 E Imperial Hwy, Brea, CA 92821
County:	Orange County
Source Receptor Area (SRA):	16
Climate Zone:	8
Land Use Setting:	Urban
Operational Year:	2024
Utility Company:	Southern California Edison
Air Basin:	South Coast Air Basin
Air District:	South Coast AQMD

Project Site Acreage	16.00
Disturbed Site Acreage	2.20

Project Components			
Demolition	***SQFT***	***Tons***	
Theater	15,000	2,420	
Total Building Demolition:	**15,000**	**2,420**	
Total Asphalt Demolition		**1,298**	
New Construction	***SQFT***	***Acres***	***Stories***
Apartments*	241,718	0.00	5
Total Residential	**241,718**	**0.00**	
Office	21,355	0.49	1
Total Non-Residential	**21,355**	**0.49**	
Parking Structure	182,108	1.39	3
Total Other Asphalt Surfaces**	13,774	0.32	
Total	**238,592**	**2.20**	

*includes area of amenities deck

**assigning remaining land use area to other asphalt surfaces for most conservative results

CalEEMod Land Use Inputs

Land Use Type	Land Use Subtype	Unit Amount	Size Metric	Lot Acreage	Land Use Square Feet
Residential	Apartments (Mid-Rise)	229	units	0.00	241,718
Commercial	General Office Building	21.355	1000 sqft	0.49	21,355

Parking [2]	Other Asphalt Surfaces	13.774	1000 sqft	0.32	13,774
				2.20	

** based on info from applicant data

Demolition[1]

Component	Amount to be Demolished (Tons)	Haul Truck Capacity (tons)	Haul Distance (miles)	Total Trip Ends	Duration (days) check durations	Trip Ends/ day
Building Demolition Haul	2420	14	39	346	12	29
Asphalt Debris Haul	1298	14	39	186	9	21
Total	3,718			532		

[1] Haul Distance based on the distance to Prima Deschecha Landfill provided by applicant

Soil Haul [1]

Construction Activities	Volume (CY)	Haul Truck Capacity (cy)	Haul Distance (miles)	Total Trip Ends	Duration (days)	Trip Ends/ day
Rough Grading Soil Haul (Export)	5695	10	39	1139	10	114

[1] Haul Distance based provided by the Applicant

Architectural Coating

	Apartments	Office	Parking Structure
Percent Interior Painted (%):	100%	100%	25%
Percent Exterior Painted (%):	60%	25%	100%
Interior Paint VOC content (grams/liter):	50	100	100
Exterior Paint VOC content (grams/liter):	50	100	100

Structures	Land Use Square Feet	CalEEMod Factor[2]	Total Paintable Surface Area	Paintable Interior Area[1]	Paintable Exterior Area[1]
Non-Residential Structures					
Apartment	241,718	2.7	652,639	489,479	97,896
				489,479	**97,896**
Non-Residential Structures					
Office	21,355	2.0	42,710	32,033	2,669
Parking Structure	182,108	2.0	364,216	68,291	91,054
				100,323	**93,723**
Parking					
Parking Strucuture (Striping)	195,882	6%	11,753	-	11,753
			11,753		**11,753**

Notes

1 CalEEMod methodology calculates the paintable interior and exterior areas by multiplying the total paintable surface area by 75 and 25 percent, respectively.

2 The program assumes the total surface for painting equals 2.7 times the floor square footage for residential and 2 times that for nonresidential square footage defined by the user. Architectural coatings for the parking lot is based on CalEEMod methodology applied to a surface parking lot (i.e., striping), in which 6% of surface area is painted.

3 100% of the interior and exterior of buildings to be modernized will be painted

Mitigation Tab

SCAQMD Rule 403

Replace Ground Cover	PM10:	5	% Reduction
Replace Ground Cover	PM2.5:	5	% Reduction
Water Exposed Area	Frequency:	2	per day
	PM10:	55	% Reduction
	PM25:	55	% Reduction
Unpaved Roads	Vehicle Speed:	15	mph

SCAQMD Rule 1186

	Clean Paved Road	9	% PM Reduction

Southern California Edison Carbon Intensity Factors

	lbs/MWH
CO_2e[1]	534
CO2:[2]	531.44
CH4:[3]	0.029
N2O:[3]	0.00617

Notes:

1 Based on CO_2e intensity factor of 534 pounds per megawatt hour; Southern California Edison. 2019, May. 2018 Sustainability Report.

2 CO_2 back-calculated from CO_2e based on Intergovernmental Panel on Climate Change Fourth Assessment Report global warming potentials for CH4 and N2O.

3 CalEEMod default values.

Global Warming Potentials (GWP)

**all trips acounted for under 'Regional Shopping Center' except the movie theater*

	Weekday VMT	Annual Vehicle Miles Traveled*
Project VMT	**84,019**	**30,666,898**

Source: From CalEEMod. Weekday VMT calculated by dividing annual VMT from CalEEMod by 365 days.

	Trip Type Percentages		
	Primary	**Diverted**	**Passby**
Regional Shopping Center	66%	17%	17%
Movie Theater	54%	35%	11%
Adjusted Trip Type Percentages	**100%**	**0%**	**0%**

Water Use and Wastewater Generation

Wastewater is treated by the Orange County Sanitation District (OCSD), which provides tertiary treated wastewater throughout the County of Orange. Therefore, CalEEMod defaults reflect 100% aerobic treatment.

	Sewer Study	Indoor[1,2]	Outdoor[1,3]	Total
Regional Shopping Center	65,996	73,329		
Movie Theater	9,450	10,500		
Water Use (gallons/day)	75,446	83,829	2,338	86,167
Water Use (gallons/year)	**27,537,790**	30,597,544	853,528	31,451,073

Notes

1 *Assigned all water use for Brea Plaza to 'regional shopping center'*

Indoor water use is adjusted to reflect the water purveyor losses in getting the potable water to the customers of 90%. The 90% factor for indoor water to wastewater is due to I/I – inflow and infiltration due to leaks in the sewer pipes that transport the wastewater to the sewage treatment

2 *plants.*

3 *Outdoor water based on total landscaped area and calculations from California Department of Water Resources' MAWA worksheet.*

Solid Waste CalEEMod Defaults*

Land Use	Total Solid Waste (tons/yr)
High Turnover (Sit Down Restaurant)	507.54
Medical Office Building	17.28
Other Non-Asphalt Surfaces	0.00
Parking Lot	0.00
Regional Shopping Center	71.84
Supermarket	193.00
Movie Theater*	143.00
TOTAL	932.66

**Calculation based on CalEEMod Appendix D, movie theater generates 0.13 tons/seat/year of solid waste. Movie theater solid waste excluded from CalEEMod 2016 solid waste module as a result of module error. therefore, emissions from existing conditions are slightly higher than reported, resulting in a conservative GHG emissions estimate of the net increase in emissions from this sector due to the project.*

			27,942		**27,942**

[3] 100% of the interior and exterior of buildings to be modernized will be painted

Electricity (Buildings)

Existing Energy

Existing non-residential modeled using historic energy demand rates in CalEEMod. Modeling is conservative because the net increase in energy use due to the project is likely smaller than reflected due to improved building energy efficiency between the project and existing land uses.

Default Historic CalEEMod Energy Use

Land Use Subtype	Title-24 Electricity Energy Intensity (kWhr/size/year)*	Nontitle-24 Electricity Energy Intensity (kWhr/size/year)	Lighting Energy Intensity (KWhr/size/year)	Title-24 Natural Gas Energy Intensity (KBTU/size/year)*	Nontitle-24 Natural Gas Energy Intensity (KBTU/size/year)

				320,642	**167,163**
Parking					
Surface Parking Lot	388,318	6%	23,299	-	23,299
Parking Strucuture (Striping)	182,108	6%	10,926	-	10,926
					34,226

Notes

1 CalEEMod methodology calculates the paintable interior and exterior areas by multiplying the total paintable surface area by 75 and 25 percent, respectively.

2 The program assumes the total surface for painting equals 2.7 times the floor square footage for residential and 2 times that for nonresidential square footage defined by the user. Architectural coatings for the parking lot is based on CalEEMod methodology applied to a surface parking lot (i.e., striping), in which 6% of surface area is painted.

3 100% of the interior and exterior of buildings to be modernized will be painted

Electricity (Buildings)

Historical Uses		
Multifamily Residential Additional Electricity Reductions[2]	**2.0%**	more efficient than 2016 Title 24 electricity rates

2 Unless otherwise noted, per CalEEMod methodology, the calculated CalEEMod emission rates are derived from the emission rates obtained from EMFAC2017 Version 1.0.3.

3 Because EMFAC2017 provides vehicle trips data for MHDT and HHDT diesel trucks, the formula provided in Appendix A of the CalEEMod User's Guide in calculating the NO_x STREX emission rates are utilized.

2 Unless otherwise noted, per CalEEMod methodology, the calculated CalEEMod emission rates are derived from the emission rates obtained from EMFAC2017 Version 1.0.3.

3 Because EMFAC2017 provides vehicle trips data for MHDT and HHDT diesel trucks, the formula provided in Appendix A of the CalEEMod User's Guide in calculating the NO_x STREX emission rates are utilized.

CalEEMod Construction Model

Brea Plaza Expansion Project, Construction

Orange County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	21.36	1000sqft	0.49	21,355.00	0
Enclosed Parking with Elevator	182.11	1000sqft	1.39	182,108.00	0
Other Asphalt Surfaces	13.77	1000sqft	0.32	13,774.00	0
Apartments Mid Rise	229.00	Dwelling Unit	0.00	241,718.00	541

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

Brea Plaza Expansion Project, Construction

Orange County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	21.36	1000sqft	0.49	21,355.00	0
Enclosed Parking with Elevator	182.11	1000sqft	1.39	182,108.00	0
Other Asphalt Surfaces	13.77	1000sqft	0.32	13,774.00	0
Apartments Mid Rise	229.00	Dwelling Unit	0.00	241,718.00	541

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant, apartments built on top of parking structure

Construction Phase - based on information provided by applicant

Off-road Equipment - no additional equipment required for Architectural Coating

Off-road Equipment - based on info from applicant

Off-road Equipment - no additional equipment required for Demolition Hauling

Off-road Equipment - based on info from applicant

Off-road Equipment - no additional equipment required for Demolition Hauling

Off-road Equipment - based on info from applicant

Off-road Equipment - no additional equipment required for Fine Grading Soil Hauling

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Off-road Equipment - no additional equipment required for Rough Grading Soil Hauling

Off-road Equipment - based on info from applicant

Off-road Equipment - based on info from applicant

Trips and VMT - based on info provided by applicant. See assumptions file.

Demolition -

Grading -

Architectural Coating - based on info from applicant

Construction Off-road Equipment Mitigation - SCAQMD Rule 403 and Rule 1186

Brea Plaza Expansion Project, Construction

Orange County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	21.36	1000sqft	0.49	21,355.00	0
Enclosed Parking with Elevator	182.11	1000sqft	1.39	182,108.00	0
Other Asphalt Surfaces	13.77	1000sqft	0.32	13,774.00	0
Apartments Mid Rise	229.00	Dwelling Unit	0.00	241,718.00	541

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant

Construction Phase -

Vehicle Trips - based on info from LLG, see assumptions file for calculations

Vehicle Emission Factors - EMFAC2017 adjustment, see assumptions file

Woodstoves -

Area Coating - parking coating accounts only for parking area

Energy Use -

Water And Wastewater - assigning all water use to regional shopping center. Based on data from sewer study. Assumes 100% aerobic treatment.

Solid Waste -

7.0 Water Detail

7.1 Mitigation Measures Water

8.0 Waste Detail

8.1 Mitigation Measures Waste

Brea Plaza Expansion Project, Existing Conditions (2021)

Orange County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Medical Office Building	1.60	1000sqft	0.04	1,596.00	0
Other Non-Asphalt Surfaces	65.93	1000sqft	1.51	65,931.00	0
Parking Lot	465.70	1000sqft	10.69	465,700.00	0
Regional Shopping Center	68.42	1000sqft	1.57	68,415.00	0
Supermarket	34.22	1000sqft	0.79	34,219.00	0
High Turnover (Sit Down Restaurant)	42.65	1000sqft	0.98	42,649.00	0
Movie Theater (No Matinee)	1,100.00	Seat	0.42	18,450.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant

Construction Phase -

Vehicle Trips - based on info from LLG, see assumptions file for calculations

Vehicle Emission Factors - EMFAC2017 adjustment, see assumptions file

Woodstoves -

Area Coating - parking coating accounts only for parking area

Energy Use -

Water And Wastewater - assigning all water use to regional shopping center. Based on data from sewer study. Assumes 100% aerobic treatment.

Solid Waste -

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Medical Office Building	1.60	1000sqft	0.04	1,596.00	0
Other Non-Asphalt Surfaces	65.93	1000sqft	1.51	65,931.00	0
Parking Lot	465.70	1000sqft	10.69	465,700.00	0
High Turnover (Sit Down Restaurant)	42.65	1000sqft	0.98	42,649.00	0
Movie Theater (No Matinee)	1,100.00	Seat	0.42	18,450.00	0
Regional Shopping Center	68.42	1000sqft	1.57	68,415.00	0
Supermarket	34.22	1000sqft	0.79	34,219.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant

Construction Phase -

Vehicle Trips - based on info from LLG, see assumptions file for calculations

Vehicle Emission Factors - EMFAC2017 adjustment, see assumptions file

Woodstoves -

Area Coating - parking coating accounts only for parking area

Energy Use -

Water And Wastewater - assigning all water use to regional shopping center. Based on data from sewer study. Assumes 100% aerobic treatment.

Solid Waste -

Fleet Mix -

Brea Plaza Expansion Project, Baseline Conditions (2024)

Orange County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Medical Office Building	1.60	1000sqft	0.04	1,596.00	0
Other Non-Asphalt Surfaces	65.93	1000sqft	1.51	65,931.00	0
Parking Lot	465.70	1000sqft	10.69	465,700.00	0
High Turnover (Sit Down Restaurant)	42.65	1000sqft	0.98	42,649.00	0
Movie Theater (No Matinee)	1,100.00	Seat	0.42	18,450.00	0
Regional Shopping Center	68.42	1000sqft	1.57	68,415.00	0
Supermarket	34.22	1000sqft	0.79	34,219.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant

Construction Phase -

Vehicle Trips - based on info from LLG, see assumptions file for calculations

Vehicle Emission Factors - EMFAC2017 adjustment, see assumptions file

Woodstoves -

Area Coating - parking coating accounts only for parking area

Energy Use -

Water And Wastewater - assigning all water use to regional shopping center. Based on data from sewer study. Assumes 100% aerobic treatment.

Solid Waste -

Fleet Mix -

Brea Plaza Expansion Project, Existing Conditions (2021) - Orange County, Annual

Brea Plaza Expansion Project, Existing Conditions (2021)

Orange County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Medical Office Building	1.60	1000sqft	0.04	1,596.00	0
Other Non-Asphalt Surfaces	65.93	1000sqft	1.51	65,931.00	0
Parking Lot	465.70	1000sqft	10.69	465,700.00	0
Regional Shopping Center	68.42	1000sqft	1.57	68,415.00	0
Supermarket	34.22	1000sqft	0.79	34,219.00	0
High Turnover (Sit Down Restaurant)	42.65	1000sqft	0.98	42,649.00	0
Movie Theater (No Matinee)	1,100.00	Seat	0.42	18,450.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2021
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant

Construction Phase -

Vehicle Trips - based on info from LLG, see assumptions file for calculations

Vehicle Emission Factors - EMFAC2017 adjustment, see assumptions file

Woodstoves -

Area Coating - parking coating accounts only for parking area

Energy Use -

Water And Wastewater - assigning all water use to regional shopping center. Based on data from sewer study. Assumes 100% aerobic treatment.

Solid Waste -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant

Construction Phase -

Vehicle Trips - based on info from LLG, see assumptions file for calculations

Vehicle Emission Factors - EMFAC2017 adjustment

Woodstoves - assumes 6 grills and 3 fire pits to be used on weekends

Area Coating - based on info from applicant: residential accounts for 60% ext coating, nonres accounts for coating of parking structure, parking assumes parking area only

Energy Use - assumes existing uses use historical data, new uses adjusted based on NORESCO study. See assumptions file for calculations

Water And Wastewater - assigned all water use to regional shopping center, based on info from sewer study. Assumes 100% aerobic treatment

Solid Waste -

Fleet Mix - see fleet mix adjustment in assumptions file

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant

Construction Phase -

Vehicle Trips - based on info from LLG, see assumptions file for calculations

Vehicle Emission Factors - EMFAC2017 adjustment

Woodstoves - assumes 6 grills and 3 fire pits to be used on weekends

Area Coating - based on info from applicant: residential accounts for 60% ext coating, nonres accounts for coating of parking structure, parking assumes parking area only

Energy Use - assumes existing uses use historical data, new uses adjusted based on NORESCO study. See assumptions file for calculations

Water And Wastewater - assigned all water use to regional shopping center, based on info from sewer study. Assumes 100% aerobic treatment

Solid Waste -

Fleet Mix - see fleet mix adjustment in assumptions file

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	30
Climate Zone	8			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2019 SCE Sustainability Report

Land Use - based on info from applicant

Construction Phase -

Vehicle Trips - based on info from LLG, see assumptions file for calculations

Vehicle Emission Factors - EMFAC2017 adjustment

Woodstoves - assumes 6 grills and 3 fire pits to be used on weekends

Area Coating - based on info from applicant: residential accounts for 60% ext coating, nonres accounts for coating of parking structure, parking assumes parking area only

Energy Use - assumes existing uses use historical data, new uses adjusted based on NORESCO study. See assumptions file for calculations

Water And Wastewater - assigned all water use to regional shopping center, based on info from sewer study. Assumes 100% aerobic treatment

Solid Waste -

Fleet Mix - see fleet mix adjustment in assumptions file

Appendix C2 Construction Health Risk Assessment

Appendices

This page intentionally left blank.

1. Construction Health Risk Assessment

1.1 INTRODUCTION

BOSC Realty Advisors/Sevenco, the project applicant, is proposing the redevelopment of the Brea Plaza Shopping Center (proposed project or project). The 16-acre project site is bounded by Mercury Insurance office development to the north, South Associated Road to the east, Imperial Highway/State Route 90 to the south, and State Route 57 to the west, in the City of Brea, Orange County, California. The project is a mixed-use project that would result in demolition of the existing theater and 139 surface parking spaces in addition to the subsequent development of a new five-story residential building, co-working office space, and parking garage on 2.2 acres of the existing Brea Plaza Shopping Center. The proposed project would involve demolition, site preparation, grading, trenching, building construction, architectural coating, paving, and finishing and landscaping. The following provides the background methodology used for the construction health risk assessment for the proposed project.

Project construction is anticipated to take place starting at the beginning of June 2022 and be completed by June of 2024 (approximately 543 workdays). The nearest sensitive receptors to the project site include the single-family houses to the north along Greenbriar Lane and east of the site along Associated Road. Guidance from the California Environmental Protection Agency (Cal/EPA), Office of Environmental Health Hazard Assessment (OEHHA), California Air Pollution Control Officers Association (CAPCOA), and the South Coast Air Quality Management District (South Coast AQMD) recommend the completion of health risk assessments (HRA) to determine the impacts of hazardous air emissions upon sensitive receptors in the vicinity of the project. As a result, a site-specific construction health risk assessment (HRA) has been prepared for the proposed project. This HRA considers the health impact to sensitive receptors (adults and children in the nearby residences) of construction emissions at the project site from diesel equipment exhaust (diesel particulate matter or DPM).

It should be noted that these health impacts are based on conservative (i.e., health protective) assumptions. The United States Environmental Protection Agency (USEPA, 2005) and the Office of Environmental Health Hazard Assessment (OEHHA, 2015) note that conservative assumptions used in a risk assessment are intended to ensure that the estimated risks do not underestimate the actual risks. Therefore, the estimated risks may not necessarily represent actual risks experienced by populations at or near a site. The use of conservative assumptions tends to produce upper-bound estimates of exposure and thus risk.

For residential-based receptors, the following conservative assumptions were used:

- It was assumed that maximum-exposed off-site residential receptors (both children and adults) stood outdoors and are subject to DPM at their residence for 8 hours per day, and approximately 260 construction days per year. In reality, California residents typically will spend on average 2 hours per day

outdoors at their residences (USEPA, 2011). This would result in lower exposures to construction related DPM emissions and lower estimated risk values.

- The calculated risk for infants from third trimester to age 2 is multiplied by a factor of 10 to account for early life exposure and uncertainty in child versus adult exposure impacts (OEHHA, 2015).

1.2 METHODOLOGY AND SIGNIFICANCE THRESHOLDS

For this HRA, the South Coast AQMD significance thresholds were deemed to be appropriate and the thresholds that were used for this project are shown below:

- Excess cancer risk of more than 10 in a million
- Non-cancer hazard index (chronic or acute) greater than 1.0

The methodology used in this HRA is consistent with the following South Coast AQMD and the OEHHA guidance documents:

- OEHHA. 2015. *Air Toxics Hot Spots Program Guidance Manual for the Preparation of Health Risk Assessments.* February, 2015.

Potential exposures to DPM from proposed project construction were evaluated for off-site sensitive receptors in close proximity to the site. Pollutant concentrations were estimated using an air dispersion model, and excess lifetime cancer risks and chronic non-cancer hazard indexes were calculated. These risks were then compared to the significance thresholds adopted for this HRA.

1.3 CONSTRUCTION EMISSIONS

Construction emissions were calculated as average daily emissions in pounds per day, using the proposed construction schedule and the latest version of California Emissions Estimation Model, known as CalEEMod Version 2016.3.2.25 (CAPCOA, 2017). DPM emissions were based on the CalEEMod construction runs, using annual exhaust PM_{10} construction emissions presented in pounds (lbs) per day.

The project was assumed to take place over approximately 24 months (543 workdays or 2.08 years) from the beginning of June 2022 through June 2024. The average daily emission rates from construction equipment used during the proposed project were determined by dividing the annual average emissions for each construction year by the number of construction days per year for each calendar year of construction (i.e., 2022, 2023, and 2024). The off-site hauling emission rates were adjusted to evaluate localized emissions from the 0.79-mile haul route within 1,000 feet of the project site. The CalEEMod construction emissions output and emission rate calculations are provided in Appendix A of the HRA.

1.4 DISPERSION MODELING

Air quality modeling was performed using the AERMOD atmospheric dispersion model to assess the impact of emitted compounds on sensitive receptors near the project. The model is a steady state Gaussian plume model and is an approved model by South Coast AQMD for estimating ground level impacts from point and fugitive sources in simple and complex terrain. The on-site construction emissions for the project were modeled as poly-area sources. The off-site mobile sources were modeled as adjacent line volume sources. The model requires additional input parameters, including chemical emission data and local meteorology. Inputs for the construction emission rates are those described in Section 1.3. Meteorological data obtained from the South Coast AQMD for the nearest representative meteorological station (Fullerton Airport) with the five latest available years (2012 to 2016) of record were used to represent local weather conditions and prevailing winds. The prevailing wind direction at the Fullerton Airport meteorological station is to the northeast, and the wind rose is provided in Appendix A.

The modeling analysis also considered the spatial distribution and elevation of each emitting source in relation to the sensitive receptors. To accommodate the model's Cartesian grid format, direction-dependent calculations were obtained by identifying the Universal Transverse Mercator (UTM) coordinates for each source location. In addition, digital elevation model (DEM) data for the area were obtained and included in the model runs to account for complex terrain. An emission release height of 4.15 meters was used as representative of the stack exhaust height for off-road construction equipment and diesel truck traffic, and an initial vertical dispersion parameter of 1.93 m was used, per California Air Resources Board (CARB) guidance (2000).

To determine contaminant impacts during construction hours, the model's Hour-By-Day-of-Week (HRDOW) scalar option was invoked to predict flagpole-level concentrations (0 m for ground-floor receptors and 6.1 m for 2nd-floor) for construction emissions generated between the hours of 7:00 AM and 4:00 PM with a 1-hour lunch break.

A unit emission rate of 1 gram per second was used for all modeling runs. The unit emission rates were proportioned over the poly-area sources for on-site construction emissions and divided between the volume sources for off-site hauling emissions. The maximum modeled concentrations from the output files were then multiplied by the emission rates calculated in Appendix A to obtain the maximum flagpole-level concentrations at the off-site maximum exposed receptor (MER). As shown in Figure 1, the MER is a single-family residence north of the site along Greenbriar Lane. The MER location is the receptor location associated with the maximum AERMOD predicted DPM concentrations from the on-site emission source because the calculated on-site emission rates are approximately 3 orders of magnitude higher than the calculated off-site emission rates (see Appendix A). Therefore, the maximum concentrations associated with the on-site emission sources produce the highest overall ground-level MER concentrations and, consequently, highest calculated health risks.

The air dispersion model output for the emission sources is presented in Appendix B. The model output DPM concentrations from the construction emission sources are provided in Appendix C.

1.5 RISK CHARACTERIZATION

1.5.1 Carcinogenic Chemical Risk

Carcinogenic compounds are not considered to have threshold levels (i.e., dose levels below which there are no risks). Therefore, any exposure will have some associated risk. The South Coast AQMD has established a maximum incremental cancer risk of 10 in a million (1×10^{-5} or 10×10^{-6}) for CEQA projects and the OEHHA also sets a typical risk management level as 10 in a million (OEHHA, 2015).

Health risks associated with exposure to carcinogenic compounds can be defined in terms of the probability of developing cancer as a result of exposure to a chemical at a given concentration. The cancer risk probability is determined by multiplying the chemical's annual concentration by its cancer potency factor (CPF), a measure of the carcinogenic potential of a chemical when a dose is received through the inhalation pathway. It is an upper-limit estimate of the probability of contracting cancer as a result of continuous exposure to an ambient concentration of one microgram per cubic meter ($\mu g/m^3$), averaged over a lifetime of 70 years.

Recent guidance from OEHHA recommends a refinement to the standard point estimate approach with the use of age-specific breathing rates and age sensitivity factors (ASFs) to assess risk for susceptible subpopulations such as children. For the inhalation pathway, the procedure requires the incorporation of several discrete variates to effectively quantify dose for each age group. Once determined, contaminant dose is multiplied by the cancer potency factor in units of inverse dose expressed in milligrams per kilogram per day $(mg/kg/day)^{-1}$ to derive the cancer risk estimate. Therefore, the following dose algorithm was used to accommodate the unique exposures associated with each receptor type.

$$\text{Dose}_{\text{AIR,per age group}} = \left(C_{\text{air}} \times \text{EF} \times \left[\frac{\text{BR}}{\text{BW}}\right] \times \text{A} \times \text{CF}\right)$$

Where:

Dose_{AIR}	=	dose by inhalation (mg/kg-day), per age group
C_{air}	=	concentration of contaminant in air ($\mu g/m^3$)
EF	=	exposure frequency (number of days/365 days)
BR/BW	=	daily breathing rate normalized to body weight (L/kg-day)
A	=	inhalation absorption factor (default = 1)
CF	=	conversion factor ($1x10^{-6}$, µg to mg, L to m^3)

The inhalation absorption factor (A) is a unitless factor that is only used if the cancer potency factor included a correction for absorption across the lung. The default value of 1 was used for this assessment. For residential receptors, the exposure frequency (EF) of 0.96 is used to represent 350 days per year to allow for a two-week period away from home each year (OEHHA, 2015). The 95th percentile daily breathing rates (BR/BW), exposure duration (ED), age sensitivity factors (ASFs), and fraction of time at home (FAH) for the various age groups are provided herein:

Age Groups	BR/BW (L/kg-day)	ED	ASF	FAH
Third trimester	361	0.25	10	0.85
0-2 age group	1,090	2	10	0.85
2-9 age group	861	7	3	0.72
2-16 age group	745	14	3	0.72
16-30 age group	335	14	1	0.73
16-70 age group	290	54	1	0.73

For construction analysis, the exposure duration spans the length of construction (e.g., 543 workdays, approximately 2.08 years). In addition, the construction duration each year was considered in the risk calculations to account for the number of days residents are exposed to construction emissions in 2022, 2023 and 2024. As the length of construction is less than 2.25 years, the third trimester and 0-2 age bins apply to the construction analysis for the off-site residential receptors.

To calculate the overall cancer risk, the risk for each appropriate age group is calculated per the following equation:

$$\text{Cancer Risk}_{\text{AIR}} = \text{Dose}_{\text{AIR}} \times \text{CPF} \times \text{ASF} \times \text{FAH} \times \frac{\text{ED}}{AT}$$

Where:

Dose_{AIR}	=	dose by inhalation (mg/kg-day), per age group
CPF	=	cancer potency factor, chemical-specific $(\text{mg/kg-day})^{-1}$
ASF	=	age sensitivity factor, per age group
FAH	=	fraction of time at home, per age group (for residential receptors only)
ED	=	exposure duration (years)
AT	=	averaging time period over which exposure duration is averaged (70 years)

The CPFs used in the assessment were obtained from OEHHA guidance. The excess lifetime cancer risks during the construction period to the maximally exposed resident were calculated based on the factors provided above. The cancer risks for each age group are summed to estimate the total cancer risk for each toxic chemical species. The final step converts the cancer risk in scientific notation to a whole number that expresses the cancer risk in "chances per million" by multiplying the cancer risk by a factor of $1x10^6$ (i.e., 1 million).

The calculated results are provided in Appendix C.

1.5.2 Non-Carcinogenic Hazards

An evaluation was also conducted of the potential non-cancer effects of chronic chemical exposures. Adverse health effects are evaluated by comparing the annual receptor level (flagpole) concentration of each chemical compound with the appropriate reference exposure limit (REL). Available RELs promulgated by OEHHA were considered in the assessment.

The hazard index approach was used to quantify non-carcinogenic impacts. The hazard index assumes that chronic sub-threshold exposures adversely affect a specific organ or organ system (toxicological endpoint). Target organs presented in regulatory guidance were used for each discrete chemical exposure. To calculate the hazard index, each chemical concentration or dose is divided by the appropriate toxicity value. This ratio is summed for compounds affecting the same toxicological endpoint. A health hazard is presumed to exist where the total equals or exceeds one.

The chronic hazard analysis for DPM is provided in Appendix C. The calculations contain the relevant exposure concentrations and corresponding reference dose values used in the evaluation of non-carcinogenic exposures.

1.6 CONSTRUCTION HRA RESULTS

The calculated results are provided in Appendix C and the results are summarized in Table 1.

TABLE 1. CONSTRUCTION RISK SUMMARY - UNMITIGATED

Receptor	Cancer Risk (per million)	Chronic Hazards
Maximum Exposed Receptor - Resident	3.1	0.007
South Coast AQMD Threshold	10	1.0
Exceeds Threshold?	No	No

Note: Cancer risk calculated using 2015 OEHHA HRA guidance.

Cancer risk for the maximum exposed receptor from project-related construction emissions was calculated to be 3.1 in a million, which would not exceed the 10 in a million significance threshold. In accordance with the latest 2015 OEHHA guidance, the calculated total cancer risk conservatively assumes that the risk for the MER consists of a pregnant woman in the third trimester that subsequently gives birth to an infant during the approximately 24-month construction period; therefore, all calculated risk values were multiplied by a factor of 10. In addition, it was conservatively assumed that the residents were outdoors 8 hours a day and exposed to all of the daily construction emissions. For non-carcinogenic effects, the chronic hazard index identified for each toxicological endpoint totaled less than one for all the off-site sensitive receptors. Therefore, chronic non-carcinogenic hazards are less than significant.

Therefore, the project would not expose off-site sensitive receptors to substantial concentrations of air pollutant emissions during construction and impacts would be less than significant.

Appendix B. Air Dispersion Model Output

*** MODELOPTs: RegDFAULT CONC ELEV FLGPOL URBAN ADJ_U*

                                        ***   MODEL SETUP OPTIONS SUMMARY   ***
- -

**Model Is Setup For Calculation of Average CONCentration Values.

  -- DEPOSITION LOGIC --
**NO GAS DEPOSITION Data Provided.
**NO PARTICLE DEPOSITION Data Provided.
**Model Uses NO DRY DEPLETION. DRYDPLT = F
**Model Uses NO WET DEPLETION. WETDPLT = F

**Model Uses URBAN Dispersion Algorithm for the SBL for   56 Source(s),
  for Total of   1 Urban Area(s):
  Urban Population =   3176000.0 ; Urban Roughness Length = 1.000 m

**Model Uses Regulatory DEFAULT Options:
       1. Stack-tip Downwash.
       2. Model Accounts for ELEVated Terrain Effects.
       3. Use Calms Processing Routine.
       4. Use Missing Data Processing Routine.
       5. No Exponential Decay.
       6. Urban Roughness Length of 1.0 Meter Assumed.

**Other Options Specified:
       ADJ_U*   - Use ADJ_U* option for SBL in AERMET
       CCVR_Sub - Meteorological data includes CCVR substitutions
       TEMP_Sub - Meteorological data includes TEMP substitutions

**Model Accepts FLAGPOLE Receptor Heights.

**The User Specified a Pollutant Type of: OTHER

**Model Calculates PERIOD Averages Only

**This Run Includes: 56 Source(s);   2 Source Group(s); and   432 Receptor(s)

               with: 0 POINT(s), including
                          0 POINTCAP(s) and   0 POINTHOR(s)
                and: 55 VOLUME source(s)
                and: 1 AREA type source(s)
                and: 0 LINE source(s)
                and: 0 RLINE/RLINEXT source(s)
                and: 0 OPENPIT source(s)
                and: 0 BUOYANT LINE source(s) with   0 line(s)

```
**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date:  16216

**Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    29.00 ;  Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                 Emission Units = GRAMS/SEC                                 ;  Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =      3.6 MB of RAM.

**Input Runstream File:          aermod.inp
**Output Print File:             aermod.out

**Detailed Error/Message File:   BREA-03.err
**File for Summary of Results:   BREA-03.sum
```

Re: Record Search Results for the Brea Plaza Shopping Center – 1639 East Imperial Highway in the City of Brea

The South Central Coastal Information Center received your records search request for the project area referenced above, located on the La Habra and Yorba Linda, CA USGS 7.5' quadrangles. The following summary reflects the results of the records search for the project area and a ½-mile radius. The search includes a review of all recorded archaeological and built-environment resources as well as a review of cultural resource reports on file. In addition, the California Points of Historical Interest (SPHI), the California Historical Landmarks (SHL), the California Register of Historical Resources (CAL REG), the National Register of Historic Places (NRHP), and the California State Built Environment Resources Directory (BERD) listings were reviewed for the above referenced project site and a ¼-mile radius. Due to the sensitive nature of cultural resources, archaeological site locations are not released.

RECORDS SEARCH RESULTS SUMMARY

Archaeological Resources* (*see Recommendations section)	Within project area: 0 Within project radius: 2
Built-Environment Resources	Within project area: 0 Within project radius: 0
Reports and Studies	Within project area: 2 Within project radius: 12
OHP Built Environment Resources Directory (BERD) 2019	Within project area: 0 Within ¼-mile radius: 0
California Points of Historical Interest (SPHI) 2019	Within project area: 0 Within ¼-mile radius: 0
California Historical Landmarks (SHL) 2019	Within project area: 0 Within ¼-mile radius: 0
California Register of Historical Resources (CAL REG) 2019	Within project area: 0 Within ¼-mile radius: 0
National Register of Historic Places (NRHP) 2019	Within project area: 0 Within ¼-mile radius: 0
Archaeological Determinations of Eligibility (ADOE): 2012	Within project area: 0 Within project radius: 0

HISTORIC MAP REVIEW - Anaheim, CA (1896, 1942) 15' USGS historic maps indicate that in 1896 there was no visible development within the project area or the project search radius. In 1942, there was still no visible development within the project area. There were several roads and buildings within the project search radius which was located within the historic place name of Brea. The Fullerton Reservoir was located south of the project area.

RECOMMENDATIONS

*When we report that no archaeological resources are recorded in your project area or within a specified radius around the project area; that does not necessarily mean that nothing is there. It may simply mean that the area has not been studied and/or that no information regarding the archaeological sensitivity of the property has been filed at this office. The reported records search result does not preclude the possibility that surface or buried artifacts might be found during a survey of the property or ground-disturbing activities.

The archaeological sensitivity of the project location is unknown because there are no previous studies for the subject property. Additionally, the natural ground-surface appears to be obscured by urban development; consequently, surface artifacts would not be visible during a survey. While there are currently no recorded archaeological sites within the project area, buried resources could potentially be unearthed during project activities. Therefore, customary caution and a halt-work condition should be in place for all ground-disturbing activities. In the event that any evidence of cultural resources is discovered, all work within the vicinity of the find should stop until a qualified archaeological consultant can assess the find and make recommendations. Excavation of potential cultural resources should not be attempted by project personnel. It is also recommended that the Native American Heritage Commission be consulted to identify if any additional traditional cultural properties or other sacred sites are known to be in the area. The NAHC may also refer you to local tribes with particular knowledge of potential sensitivity. The NAHC and local tribes may offer additional recommendations to what is provided here and may request an archaeological monitor.

For your convenience, you may find a professional consultant**at www.chrisinfo.org. Any resulting reports by the qualified consultant should be submitted to the South Central Coastal Information Center as soon as possible.

**The SCCIC does not endorse any particular consultant and makes no claims about the qualifications of any person listed. Each consultant on this list self-reports that they meet current professional standards.

If you have any questions regarding the results presented herein, please contact the office at 657.278.5395 Monday through Thursday 9:00 am to 3:30 pm. Should you require any additional information for the above referenced project, reference the SCCIC number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System,

Stacy St. James

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the California Historical Resources Information System (CHRIS) Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

The California Office of Historic Preservation (OHP) contracts with the California Historical Resources Information System's (CHRIS) regional Information Centers (ICs) to maintain information in the CHRIS inventory and make it available to local, state, and federal agencies, cultural resource professionals, Native American tribes, researchers, and the public. Recommendations made by IC coordinators or their staff regarding the interpretation and application of this information are advisory only. Such recommendations do not necessarily represent the evaluation or opinion of the State Historic Preservation Officer in carrying out the OHP's regulatory authority under federal and state law.

Re: Native American Consultation, Pursuant to Senate Bill 18 (SB18), Government Codes §65352.3 and §65352.4, as well as Assembly Bill 52 (AB52), Public Resources Codes §21080.1, §21080.3.1 and §21080.3.2, Brea Plaza Hotel and Apartments Expansion Project, Orange County

Dear Ms. Vander Dussen:

Attached is a consultation list of tribes with traditional lands or cultural places located within the boundaries of the above referenced counties or projects.

Government Codes §65352.3 and §65352.4 require local governments to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose of avoiding, protecting, and/or mitigating impacts to cultural places when creating or amending General Plans, Specific Plans and Community Plans.

Public Resources Codes §21080.3.1 and §21080.3.2 requires public agencies to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose of avoiding, protecting, and/or mitigating impacts to tribal cultural resources as defined, for California Environmental Quality Act (CEQA) projects.

The law does not preclude local governments and agencies from initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction. The NAHC believes that this is the best practice to ensure that tribes are consulted commensurate with the intent of the law.

Best practice for the AB52 process and in accordance with Public Resources Code §21080.3.1(d), is to do the following:

Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section.

The NAHC also recommends, but does not require that lead agencies include in their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential affect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

    - A listing of any and all known cultural resources have already been recorded on or adjacent to the APE, such as known archaeological sites;
    - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
    - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the APE; and
    - If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

    - Any report that may contain site forms, site significance, and suggested mitigation measures.

      All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code Section 6254.10.

3. The result of the Sacred Lands File (SFL) check conducted through the Native American Heritage Commission was negative.

4. Any ethnographic studies conducted for any area including all or part of the potential APE; and

5. Any geotechnical reports regarding all or part of the potential APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS is not exhaustive, and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event, that they do, having the information beforehand well help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance we can assure that our consultation list remains current.

If you have any questions, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Subject: SB18 & AB52 Brea Plaza Hotel and Apartments Expansion

Greetings,

A records check of the Tribal Historic preservation office's cultural registry revealed that this project is not located within the Tribe's Traditional Use Area. Therefore, we defer to the other tribes in the area. This letter shall conclude our consultation efforts.

Thank you,

Subject: Re: Notice of Preparation (NOP) and Scoping Meeting for the Brea Plaza Hotel and Apartments Expansion Project Draft Environmental Impact Report

Good Afternoon,

I am writing on behalf of the Juaneno Band of Mission Indians, Acjachemen Nation- Belardes in response to a July 27th NOP of an Environmental Impact Report for the Brea Plaza Hotel and Apartments Expansion Project. We wish to consult on this project and look forward to reviewing the DEIR when it becomes available. Can you please provide information regarding the following:

- When was the initial structure slated for demolition built? If it was before 1980 when CEQA guidelines were in place, the soil was likely not monitored.
- What are the results from a Sacred Lands File Search?
- What are the results from a search with the California Historic Resources Information Systems?

Thank you, and I look forward to hearing from you.

Húu'uni 'óomaqati yáamaqati.
Teach peace

recognized by the State of California as the aboriginal tribe of the Los Angeles basin

July 27, 2020

Project Name: Brea Plaza Hotel and Apartments Expansion Project

Dear Tracy Steinkruger,

Thank you for your letter dated July 27, 2020 regarding AB52 consultation. The above proposed project location is within our Ancestral Tribal Territory; therefore, our Tribal Government requests to schedule a consultation with you as the lead agency, to discuss the project and the surrounding location in further detail.

Please contact us at your earliest convenience. ***Please Note:AB 52, "consultation" shall have the same meaning as provided in SB 18 (Govt. Code Section 65352.4).***

Thank you for your time,

Andrew Salas, Chairman
Gabrieleno Band of Mission Indians – Kizh Nation
1(844)390-0787

Andrew Salas, Chairman | Nadine Salas, Vice-Chairman | Dr. Christina Swindall Martinez, secretary
Albert Perez, treasurer I | Martha Gonzalez Lemos, treasurer II | Richard Gradias, Chairman of the council of Elders

PO Box 393 Covina, CA 91723 admin@gabrielenoindians.org

Most Important Things for Agencies to Know About AB52:

- An EIR, MND, or ND can not be certified until AB-52 tribal consultation has concluded.
- Agreed mitigation measures with the tribe, MUST be recommended for inclusion in the environmental document.
- Signature confirming acceptance of these mitigation measures recommended by our Tribal Government is required within 14 days of receipt to conclude AB52 consultation.

Tribal Cultural Resources Mitigation Measures within Kizh Nation Tribal Territory:

Note: To avoid compliance issues with the following laws, all Native American Monitoring shall be conducted by a documented lineal descendant from the ancestral Tribe of the project area (NAGPRA Law 10.14)

- The Native American Graves Protection and Repatriation Act (NAGPRA), Public Law-101-601, 25 U.S.C. 3001 et seq., 104 Stat. 3048.
- CEQA Guidelines Section15064.5, PRC 5097.98 (d)(1).
- The United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP).

If you are receiving these measures, The Gabrieleño Band of Mission Indians Kizh -Nation are the direct lineal descendants of your project area. The Kizh Nation ONLY responds and consults on projects within their ANCESTRAL tribal territory. The Kizh Nation possesses Tribal archives including documented historical information as well as multiple members who possess unique knowledge derived from oral tradition passed down through generations of the Tribe in order to provide the expertise needed to identify whether a project is located within a culturally sensitive area given its proximity to village areas, commerce areas, recreation areas, ceremonial areas, and burial locations.

Native American Heritage Commission (NAHC) Guidelines for Native American Monitors/Consultants (approved 9/13/05): By acting as a liaison between Native American, archaeologist, developers, contactors and public agency, a Native American monitor/consultant can ensure that cultural features are treated appropriately from the Native American point of view. This can help others involved in a project to coordinate mitigation measures. These guidelines are intended to provide prospective monitors/consultants, and people who hire monitors/consultants, with an understanding of the scope and extant of knowledge that should be expected.

Mitigation Guidelines for Tribal Cultural Resources (TCRs): CEQA now defines TCRs as an independent element separate from archaeological resources. Environmental documents shall address a separate Tribal Cultural Resources section that includes a thorough analysis of the impacts to only TCRs and includes separate and independent mitigation measures created with tribal input under AB-52 consultations. Therefore, all agreements, mitigation, and conditions of approval regarding TCRs shall be handled solely with the Tribal Government and conversely all agreements, mitigation, and conditions of approval regarding Archaeological Resources shall be handled by an Archaeological resource company.

MITIGATION MEASURES

Retain a Native American Monitor/Consultant: Prior to the commencement of any ground disturbing activity at the project site, the project applicant shall retain a Native American Monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation – the tribe that consulted on this project pursuant to Assembly Bill A52 - SB18 (the "Tribe" or the "Consulting Tribe"). A copy of the executed contract shall be submitted to the Lead Agency prior to the issuance of any permit necessary to commence a ground-disturbing activity. The Tribal monitor will only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the project area. The Tribal Monitor will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when all ground-disturbing activities on the Project Site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources. Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 50 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by project activities shall be evaluated by the Tribal monitor approved by the Consulting Tribe and a qualified archaeologist if one is present. If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue in other parts of the Project site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]). Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin (non-TCR) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

Unanticipated Discovery of Human Remains and Associated Funerary Objects:
Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in PRC 5097.98, are also to be treated according to this statute. Health and Safety Code 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and excavation halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the NAHC and PRC 5097.98 shall be followed.

Resource Assessment & Continuation of Work Protocol:

Upon discovery of human remains, the tribal and/or archaeological monitor/consultant/consultant will immediately divert work at minimum of 100 feet and place an exclusion zone around the discovery location. The monitor/consultant(s) will then notify the Tribe, the qualified lead archaeologist, and the construction manager who will call the coroner. Work will continue to be diverted while the coroner determines whether the remains are human and subsequently Native American. The discovery is to be kept confidential and secure to prevent any further disturbance. If the finds are determined to be Native American, the coroner will notify the NAHC as mandated by state law who will then appoint a Most Likely Descendent (MLD).

Kizh-Gabrieleno Procedures for burials and funerary remains:

If the Gabrieleno Band of Mission Indians – Kizh Nation is designated MLD, the Koo-nas-gna Burial Policy shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects.

Treatment Measures:

Prior to the continuation of ground disturbing activities, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed. The Tribe will work closely with the qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be taken which includes at a minimum detailed descriptive notes and sketches. Additional types of documentation shall be approved by the Tribe for data recovery purposes. Cremations will either be removed in bulk or by means as necessary to ensure completely recovery of all material. If the discovery of human remains includes four or more burials, the location is considered a cemetery and a separate treatment plan shall be created. Once complete, a final report of all activities is to be submitted to the Tribe and the NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

Professional Standards: Native American and Archaeological monitoring during construction projects will be consistent with current professional standards. All feasible care to avoid any unnecessary disturbance, physical modification, or separation of TCR's shall be taken. The Native American monitor must be approved by the Gabrieleno Band of Mission Indians-Kizh Nation. Principal personnel for Archaeology must meet the Secretary of Interior standards for archaeology and have a minimum of 10 years of experience as a principal investigator working with Native American archaeological sites in southern California.

Re: Brea Plaza Hotel and Apartments Expansion

Dear Ms. Vanderdussen,

This letter is written on behalf of Rincon Band of Luiseño Indians, ("Rincon Band" or "Band"), a federally recognized Indian Tribe and sovereign government.

The Band has received the notification for the above referenced project. The location identified within project documents is not within the Band's specific Area of Historic Interest (AHI).

At this time, we have no additional information to provide. We recommend that you directly contact a Tribe that is closer to the project and may have pertinent information.

Thank you for submitting this project for Tribal review. If you have additional questions or concerns, please do not hesitate to contact our office at your convenience at (760) 297-2635 or via electronic mail at crd@rincon-nsn.gov.

Thank you for the opportunity to protect and preserve our cultural assets.

Sincerely,

Deneen Pelton

Santa Ana, CA 92707

RE: Preparation of a Draft Environmental Impact Report for the Proposed Brea Plaza Hotel and Apartments Expansion Project in the City of Brea

Ms Osman

Please find attached our input to your questionnaire regarding the impact on Brea Olinda Unified School District. As we commented, The School District would welcome the opportunity to discuss the impacts of the proposed project and examine methods to ensure quality school facilities can be provided for students generated from the proposed project. The School District would be interested in discussing ways to ensure the Proposed Project fully mitigates its impact on the School District's facilities to ensure that quality school facilities can be provided for new residents.

If you have any questions, please contact me at (714) 990-7827.

Sincerely,

Richard Champion
Assistant Superintendent, Business Services
Brea-Olinda Unified School District

Enc: Questionnaire

Proposed Brea Plaza Hotel and Apartments Expansion Project
School District Questionnaire

1. Please indicate which schools would likely serve the proposed project.

The proposed project is located within the attendance boundaries of the following schools:

Grades K-6: Brea Country Hills Elementary School
Grades 7-8: Brea Junior High School
Grades 9-12: Brea Olinda High School

2. What is the capacity of each of the schools?

The table below lists the approximate capacities for the schools utilizing the current classroom counts and the loading standards of the State of California. These figures do not account for the need to reconstruct school facilities to maintain their availability to accommodate students generated from new residential and commercial/industrial development.

School	Capacity
Brea Country Hills Elementary School	625
Brea Junior High School	918
Brea Olinda High School	2,295

3. What is the average enrollment (10-year average) of each school that would serve the project site?

School	Ten Year Average Enrollment
Brea Country Hills Elementary School	601
Brea Junior High School	918
Brea Olinda High School	1,871

4. Would these schools be able to accommodate a potential increase in enrollment?

While the schools listed above have sufficient capacity at this time that does not take into account the reconstruction needs that have been identified in the School District's 2018 Facilities Master Plan. Each of the facilities listed above has significant needs for reconstruction to ensure the facilities are available to accommodate student enrollment from the Proposed Project. As noted below, this also does not take into account the cumulative impact of other development within the School District.

5. What impact will the proposed project, in combination with all the other projects planned in the area, have on the ability of the Brea Olinda Unified School District to provide educational services in the area?

As identified in the Residential and Commercial/Industrial Development School Fee Justification Study for Brea-Olinda Unified School District dated May 8, 2020 ("Development Impact Study"), the cumulative impact of new residential and commercial/industrial construction will require the construction and reconstruction of school facilities to accommodate new student enrollment from such development. The Development Impact Study identifies a cost impact of $6.82 per square foot for new single family detached units and $7.29 per square foot for new multi-family attached units.

6. Has the District adopted a fee program, pursuant to Senate Bill 50, that levies statutory school impact fees per residential (or non-residential) building square foot that may be levied for school construction? If yes, what is the current School Fee?

The School District currently levies fees on new residential development in the amount of $4.08 per square foot and fees on new commercial/industrial development in the amount of $0.66 per square foot.

7. Please add any comments you may wish to make regarding this matter.

The School District would welcome the opportunity to discuss the impacts of the Proposed Project with the applicant and examine methods to ensure quality school facilities can be provided for students generated from the Proposed Project. We understand that the fees identified above are the maximum the School District can charge for new residential development, but as identified in the Development Impact Study, these fees are not adequate to fully mitigate the impact of such construction. The School District, therefore, would be interested in discussing ways to ensure the Proposed Project more fully mitigates its impact on the School District's facilities to ensure that quality school facilities can be provided for new residents.

Brea Olinda Unified School District	08/25/2020
Agency	Date

Proposed Brea Plaza Expansion Project
Police Questionnaire

Please verify/respond to the following:

1. Please confirm the following station responds to calls from the project site:
   a. the Brea Police Station located at 1 Civic Center Circle, Brea.

2. Please indicate the type of service calls or service demands anticipated by the proposed uses (residential, office, hotel).

   Since this location is currently a shopping center, for 2019 there were 304 calls for service (CFS) in the Brea Plaza. The top categories of CFS were traffic, alarm, theft, suspicious subjects/circumstances, disturbances/other, and patrol checks. This proposed project indicates 189 apartment units (ranging from studio to 4 bedrooms) as well as office space. By introducing 189 apartments as well as office space there would be an increase of CFS. It is anticipated, based on data from other apartments within the City of Brea, CFS would include disturbances, suspicious activity, theft and alarm calls.

3. Given the existing level of staffing and equipment, will the police department be able to provide police services to the proposed project? If not, please indicate what will be required to serve the project.

   Based upon the methodology from the February 2020 Management Partners Brea Police Department Review of Police Services and Staffing report, 189 apartment units would increase the population to 530 persons approximately. In addition, the increase of population would produce an increase in annual CFS by 323. This increased work load upon the police department, would necessitate additional staffing to maintain the current level of service within the community.

4. What impact will the proposed project, in combination with all the other projects planned in the area, have on the ability of the police department to provide police services in the area?

   In addition to this project, there is an anticipated project within the Brea Mall, which is located on the other side of the 57 Freeway. While still in development, having two significant projects within close proximity to this project, produces traffic congestion, and increase workload within a small geographic area. Additionally, there is a current project located at Imperial Hwy/St. College Blvd, which is a smaller shopping center; however, with an In-n-Out restaurant and other high demand shopping/restaurant draws, the geographic compaction is significant.

Proposed Brea Plaza Expansion Project
Police Questionnaire

5. What conditions will the Police Department require or recommended to reduce safety hazards and reduce potential impacts on police service?

   To increase public safety, the police department would request ALPR (license plate reader system), fiber optic cable to connect to existing fiber network, and funding for fixed mounted cameras for a city-wide camera system which is currently under development.

6. Please add any comments you may wish to make regarding this matter.

   The Brea Shopping Center has traffic issues, and under non-Covid 19 conditions, is significantly impacted by traffic. Ingress/egress routes out of the center are limited and only one currently is controlled by a traffic signal (Imperial/Brea Plaza), and that signal controls egress traffic to a West bound exit only. A detailed study/plan of how to control traffic into and out of the proposed project is suggested and the ability of public safety personnel to access the project would be required.

Response Prepared By:

David A. Dickinson/Police Captain

Name		**Title**
Brea Police Department	**3/11/21**	
Agency		**Date**

Proposed Brea Plaza Expansion Project
Fire Questionnaire

Please verify/respond to the following:

1. Please list any additional stations that would respond to the site:

Fire Stations and Equipment Serving the Project Site

Station	Address	Equipment
City of Brea Fire Department		
Brea Fire Department – Station #1	555 North Berry Street, Brea	Type 1 – Advanced Life Support, 3 personnel
Brea Fire Department – Station #2	200 North Brea Boulevard, Brea	Pierce/tiller – Advanced Life Support, 4 personnel
Fullerton Fire Department		
Fullerton Fire Department – Station #4	3251 North Harbor Boulevard, Fullerton	Type 1 – Advanced Life Support, 4 personnel
Los Angeles County Fire Department		
LACFD – Station 191	850 West La Habra Boulevard, La Habra	2 paramedics
LACFD – Station 192	520 South Harbor Boulevard, La Habra	Type 1 – Advanced Life Support, 3 personnel
LACFD – Station 193	1000 West Risner Way, La Habra	Type 1 – Advanced Life Support, 3 personnel

2. What is the approximate fire flow requirement for the proposed project?

Fire flow requirement for this project as proposed will be:

- Parking Structure – 4,500 GPM for 4 hours with 5 provided fire hydrants
- Apartment Building – 6,000 GPM for 4 hours with 6 provided fire hydrants

3. The Department's standard is 6 minutes to first arriving unit on scene. What is the average response time to the project site?

Response times for the surrounding area/districts were evaluated for the previous calendar year (2020). On average, the "dispatch to on-scene time" for a Brea Fire unit to arrive is 7 minutes and 30 seconds.
After evaluating the 89 ft height of the multi-story project, it is important to note the extended response time of the Brea Fire Department's ladder truck. The "dispatch to on-scene time" for the ladder truck company is 7 minutes and 52 seconds.

4. Are there any existing deficiencies in the level of fire protection service currently provided to the area including and surrounding the project site?

The Brea Fire Department operates a 2007 ladder truck, which continues to experience an exacerbated amount of mechanical issues. Its out-of-service time is growing more frequently each year, having already performed at least one complete engine replacement. As a specialized, tactically-specific apparatus, these mechanical issues often leave the community void of its technical capabilities. A city the size of Brea deploys one ladder truck, which is in alignment with National Fire Protection Association (NFPA) standards for its call volume and identified hazards. In attempt to remedy this shortcoming, the city purchased a used 1999 ladder truck to serve as a reserve, however, it too continues to experience ongoing mechanical

faults. In the two years since its purchase, the City has invested in excess of 4 times its purchase cost.

5. Would this project have a significant impact on the ability to maintain adequate level of fire protection service to the area?

Taking into consideration the intended height and occupancy use, the ladder truck deficiencies of the Brea Fire Department are highlighted by the sheer scope and scale of this project. The specific duties of this apparatus and its highly trained crew are a critical component of fire department operations. Such duties include multi-story rescues of trapped victims, roof operations, multi-level ventilation tactics, elevated master streams and water supply and so on. Without the reliability of a modern ladder truck, the City and its Fire Department may be potentially incapable of the appropriate response and mitigation of an incident throughout this development and beyond.

Additionally, Orange County Fire Annex operational response standards require 2 ladder trucks to be on every working structure fire. California mutual and automatic aid agreements operate under a working theory that each participating agency be able to provide a like-for-like service to each other. Brea Fire must be able to provide at least one of its own ladder trucks for incidents in its jurisdiction, and seek assistance from neighboring jurisdictions for the second ladder truck. In turn, Brea Fire must be able to offer its apparatus for the assisting agencies as well. Without a reliable ladder truck, Brea risks losing its automatic and mutual aid agreements with its surrounding and cooperating agencies.

6. What conditions will the Fire Department require or recommended to reduce fire hazards and reduce potential impacts on fire service?

The Brea Fire Department requests this development provide funding for a new ladder truck to responsibly maintain its response requirements, provide adequate protection for this project and its intended residents and lastly, aid in the successful overall execution of the Brea Fire Department's mission. In doing so, OC Fire Annex procedure, NFPA 1710 and our ISO 3 rating remain met in tact allowing for community security and reduced insurance premiums overall. ***Estimated value of request - $1.7 million***

The project would comply with the current California Fire and Building Codes, adopted City ordinances, and applicable national standards. The following fire protection systems would be required: automatic fire sprinkler systems throughout the parking structure and structures, automatic fire alarm system, fire pump, an automatic secondary on-site water supply, and an emergency responder radio coverage system. Additionally, fire apparatus access roads would be provided to ensure adequate accessibility to the proposed structure.

7. Please add any other comments you may wish to make regarding this project.

Fire impact fees cannot be used to replace preexisting apparatus and are independent of the above request. Please contact Deputy Chief / Fire Marshal Chris Nigg for any further questions or clarification of the above.

SEWER STUDY

FOR

Brea Plaza Redevelopment Project
1639 E. Imperial Highway
Brea, CA 92821

City of Brea

Preparation Date: March 5th, 2021
Revised: May 25th, 2021
Revised: June 22nd, 2021

PLANS PREPARED UNDER THE SUPERVISION OF:

6/22/21

Fred Cornwell, P.E. - R.C.E 45591 **Date**

13821 Newport Ave., Su. 110• Tustin, CA 92780 • Phone (949) 724-9480 • Fax (949) 724-9484

Proposed Site

The proposed project consists of redeveloping 2.2 acres of the approximately 13.7 acre existing retail site known as the Brea Plaza. The proposed project will involve the demolition of the movie theater building, as well as the asphalt drive aisles/parking areas, concrete walkways, and landscaped planters within the project area, and the construction of one eight-story apartment building.

The upper five stories of the building will contain 189 residential apartments (of which 15 are co-living units), and the lower three stories will consist of concrete podium parking. A roof garden and pool will be located on the fourth level of the building. The project will also include asphalt drive aisles, a concrete loading dock area, and concrete walkways. In addition, the proposed development will construct a two-story office building over a portion of an existing multi-tenant retail building, and a one-story office building over a portion of the existing Custom Comfort Mattress store.

The existing on-site sewer system will be utilized, and, if necessary, improved to provide adequate conveyance for the increased sewer flow.

Methodology

This sewer report is prepared to quantify the existing and proposed flows tributary to the proposed and existing sewers which will serve the proposed project. The City of Brea design flow criteria from the 2005 Sewer Master Plan will be used to calculate the proposed gallons per day (GPD) that the new development will contribute to the existing sewer system. In addition, the design criteria will also be used to estimate the amount of existing tributary flows that the various upstream residences, schools, offices, etc. are contributing to the downstream sewer connection.

This estimate of existing flows will be compared to actual monitoring data which was conducted on the previously mentioned downstream connection manhole location on Imperial Avenue. Finally, we will analyze the impact that the “calculated” additional flows will have on each section of the sewer system. We will be using the computer program “FlowMaster v5.15” produced by Haestad Methods to perform these calculations.

Existing Flows:

The average dry weather existing sewer flow rates were calculated using the unit flow factors contained in Table 1 of the City of Brea Design Standards. Results are summarized below in "Table A" and show that Brea Plaza is currently produces a total of 75,446 Gallons per day (GPD). All sewer flows from Brea Plaza are directed to the Imperial Avenue Manhole. This manhole also serves as a junction for upstream sewer flows from surrounding tributary areas.

The attached "Exhibit A" uses the City of Brea sewer atlas to give a visual representation of how the surrounding tributary areas were counted, and how they flow downstream to the Imperial Avenue manhole. Per "Table A" below the surrounding tributary areas produce a total average dry weather flow of 492,816 GPD.

In total, the average dry weather (Qadw) existing sewer flow rate is 568,262 GPD or 0.88 cfs. Using the City of Brea Design Standards this 0.88 cfs can be converted from average dry weather to peak dry weather (Qpdw) using the formula Qpdw = (1.84)*(Qadw^.92). Similarly, peak dry weather is converted to peak wet weather (Qpww) using the formula Qpww = 1.25*Qpdw. The converted values shown in "Table B" result in a peak dry weather value of 1.63 cfs, and a peak wet weather value of 2.04 cfs.

Table A: Average Dry Weather Existing Flow Rates
(Utilizing the City of Brea's Design Guidelines)

Brea Plaza						
Existing	Type	Area/Seats	Unit Flow Factor	GPD	CFS	Sewer Sections Tributary To

Table B: Existing Flow Rate Conversion – Average Dry Weather to Peak Wet Weather (Utilizing the City of Brea's Design Guidelines)

Calculated Flow Rates		GPD	CFS
Avg Dry Weather:	Qadw	568,262	0.88
Peak Dry Weather:	Qpdw (1.84*Qadw^.92)		1.63
Peak Wet Weather:	Qpww (1.25*Qpdw)		2.04

Table C: Imperial Avenue Manhole Monitored Flow Rates

Monitored Flow Rates	GPM	GPD	CFS
Average	283.07	407,621	0.63
Minimum	82.15		0.18
Maximum	491.18		1.09

The Imperial Avenue manhole was monitored under dry weather conditions from October 28th to November 5th, 2020. Results from this monitoring are shown in "Appendix B" and are summarized in "Table C" above. An average of 283.07 GPM or 407,621 GPD was monitored; 72% of the "calculated" average dry weather flow rate of 568,262 GPD. This monitored average dry weather flow rate of 283.07 GPM is equivalent to 0.63 cfs. "Table C" also shows the peak dry weather monitored flow rate of 1.09 cfs. Since this monitored peak dry weather flow rate of 1.09 cfs is lower than the "calculated" peak dry weather flow rate of 1.63 cfs; the more conservative "calculated" values will be used to analyze the sewer segments in the subsequent sections of this report.

Proposed Flows:

For the new proposed development, the average dry weather sewer flow rates were calculated using the unit flow factors contained in Table 4-2 of the City of Brea 2005 Sewer Master Plan. To calculate the proposed flows the 189 residential units were separated into 174 single units and 15 co-living units. Ten of the co-living units have 4 bedrooms for a product of 40 units; while 5 co-living units have 3 bedrooms for a product of 15 units. The 174 single units and 55 co-living units were using in the proposed flow rate calculations for a total of 229 units.

Results of the proposed flow rate calculations are summarized in "Table D" below and show that the new proposed development will add 49,658 Gallons per day (GPD) to the existing sewer system. However, since the existing Theater is being demolished, the 9,450 GPD it produces (see table "A") will be deducted for a net total of 40,208 GPD.

Table D: Average Dry Weather Proposed Flow Rates (Utilizing the City of Brea's Design Guidelines)

Proposed Apartment Calculations					
Floor/Level	Type	Dwelling Units	Unit Flow Factor	GPD	CFS
3-7	Single Units	174	210 GPD/DU	36,540	0.057
3-7	Co-Living Units	55	210 GPD/DU	11,550	0.018
Proposed Office Calculations					
Floor/Level	Type	Area (SF)	Unit Flow Factor	GPD	CFS
2-4	Offices	21,335	73.5 GPD/TSF	1,568	0.002
			Total Proposed	**49,658**	**0.077**
Reduction of Theater Flows Due to Building Removal					
Floor/Level	Type	Dwelling Units	Unit Flow Factor	GPD	CFS
-	Theater	~1,125 Seats	8.4 GPD/Seat	(9,450)	(0.015)
			Net Total	**40,208**	0.062

The "calculated" average dry weather net flow rate of 40,208 GPD for the new development is equivalent to 0.062 cfs. Per "Table E" below, the proposed peak dry weather flow rate is 0.143 cfs, and the proposed peak wet weather flow rate is 0.179 cfs. During the sewer section analysis, these proposed flow rates will be added to the existing flow rates to analyze the impact of the new development on each sewer section.

Table E: Proposed Flow Rate Conversion - Average Dry Weather to Peak Wet Weather (Utilizing the City of Brea's Design Guidelines)

Proposed Flow Rates		GPD	CFS
Avg Dry Weather:	Total GPD (Qadw)	40,208	0.062
Peak Dry Weather:	Qpdw (1.84*Qadw^.92)		0.143
Peak Wet Weather:	Qpww (1.25*Qpdw)		**0.179**

As shown in "Exhibit B", the existing sewer lines will be used to convey Brea Plaza flows from the existing and proposed tributary buildings. The flows are directed southerly where they confluence with flows from the surrounding areas (see "Exhibit A") at the Imperial Ave. manhole. Using "FlowMaster v5.15" the sewer sections shown in "Exhibit B" were analyzed to determine adequate capacity. The FlowMaster output calculations can be found in Appendix A.

Per the City of Brea Design Standards found in the 2005 Sewer Master Plan, for existing pipes the depth to pipe diameter ratio (d/D) shall be a maximum of 0.64 for peak dry weather flow rates, and 0.75 for peak wet weather flow rates.

"Table F" located below summarizes the results of the section analysis. Only peak dry weather and peak wet weather conditions were analyzed. Results show that all of the onsite Brea Plaza

sewer pipe sections (sections A-F) are adequately sized to convey both the existing and proposed flows for each weather condition.

Section G is the critical section since it must convey all of the onsite flows, as well as the flows from the surrounding areas shown in “Exhibit A.” Under peak dry weather conditions the d/D ratio increases from 0.46 to 0.49 as the sewer flow increases from 1.63 cfs to 1.78 cfs. The proposed depth to pipe diameter ratio of 0.49 is well below the design limit of 0.64.

Under peak wet weather conditions the d/D ratio increases from 0.53 to 0.55 as the sewer flow increases from 2.04 cfs to 2.22 cfs. The proposed depth to pipe diameter ratio of 0.55 is well below the design limit of 0.75.

Conclusion:

As shown in the flow tables, under peak dry weather conditions the proposed flow depth to pipe diameter ratios are well below the 64% limit for the existing 8” and 12” sewer pipes at a maximum ratio of 0.36 and 0.49 respectively.

Similarity, under peak wet weather conditions the proposed flow depth to pipe diameter ratios are well below the 75% limit for the existing 8” and 12” sewer pipes at a maximum ratio of 0.41 and 0.55 respectively.

Therefore all existing sewer pipes are currently sized to adequately convey the additional tributary flows from the proposed Brea Plaza development.

Methods & Procedures & Equipment

Methods and Procedures

Utility Systems Science & Software provided the CA Engineering Group with an off the shelf, non-proprietary flow monitoring solution that included two state of the art Hach Flo-Dar® AV Sensor systems. The project course of action is listed below. The US^3 team:

- Assessed permitting and traffic control at the sites on E. Imperial Hwy in Brea and in Fullerton, CA.
- Validated the sites for suitability for sewer flow monitoring for the Brea Plaza Project.
- Obtained an Encroachment Permit from the City of Brea.
- Coordinated with the City Inspector for installation and removal of equipment.
- Installed and removed traffic control in accord with approved site-specific Work Area Traffic Control Handbook (WATCH) Diagrams for both the installation and removal of flow monitoring equipment.
- Installed and calibrated the equipment per manufacturer recommendations.
- Removed the equipment, validated the data and prepared the data reports.
    - The data supports the conclusion that there is capacity available in the monitored sewer lines since the depth for the peak flows observed during this study did not exceed the d/D limit of 0.50 at either site at any time.
    - Imperial MH: maximum d/D = ~0.42 and peak flow = ~0.7073 mgd (~1.0944 cfs).
    - Perlin MH: maximum d/D = ~0.41 and peak flow = ~0.7815 mgd (~1.2092 cfs).

Equipment

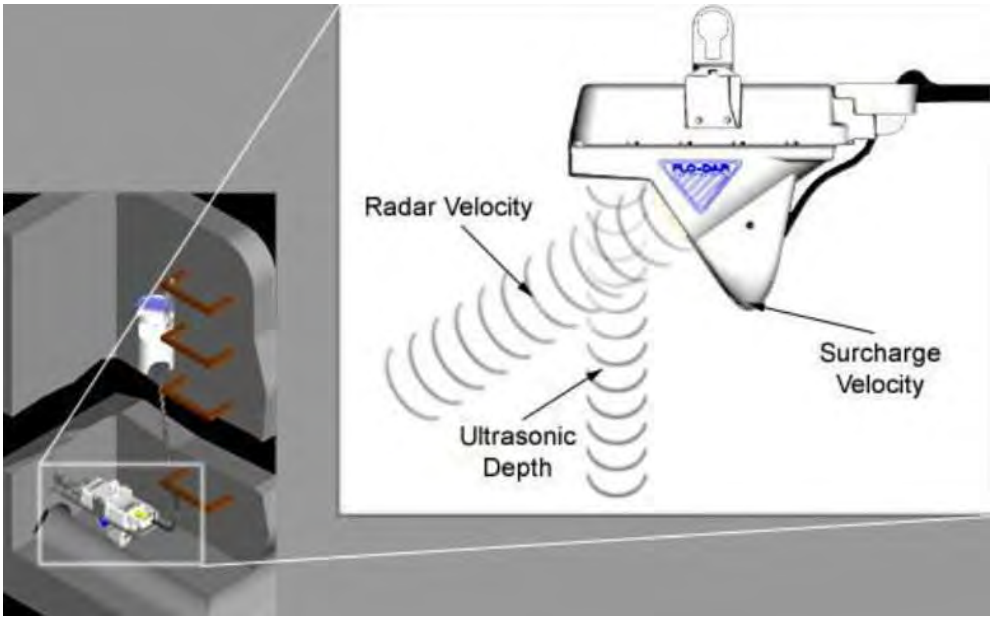

Figure: Equipment installed for the Sewer Flow Monitoring Study

Figure: Web-Enabled Flo-Dar® AV Sensor, Radar-Based Velocity/Area Flow Meter

SPECIFICATIONS

- **Enclosure**
  - IP68 Waterproof rating, Polystyrene
- **Dimensions**
  - 160.5 W x 432.2 L x 297 D mm (6.32 x 16.66 x 11.7 in.),
  - With SVS, D = 387 mm (15.2 in.)
- **Weight**
  - 4.8 kg (10.5 lbs.)
- **Operating Temperature**
  - -10 to 50°C (14 to 122°F)
- **Storage Temperature**
  - -40 to 60°C (-40 to 140°F)
- **Power Requirements**
  - Supplied by FL900 Flow Logger, Flo-Logger, or Flo-Station

- **Interconnecting Cable**
  - Disconnect available at both sensor and logger or Flo-Station
  - Polyurethane, 0.400 (±0.015) in. diameter; IP68
  - Standard length 9 m (30 ft), maximum 305 m (1000 ft)
- **Cables – available in two styles:**
  - connectors at both ends
  - connector from sensor with open leads to desiccant hub, desiccant hub with connector to logger. A potting/sealant kit will be included. This can be used to run the cable through conduit.
- **Certification**
  - Certified to: FCC Part 15.245: FCC ID: VIC-FLODAR24
  - Industry Canada Spec. RSS210. v7: IC No.: 6149A-FLODAR24

SURCHARGE DEPTH MEASUREMENT

  - Auto zero function maintains zero error below 0.5 cm (0.2 in.)
- **Method**
  - Piezo-resistive pressure transducer with stainless steel diaphragm
- **Range**
  - 3.5 m (138 in.), overpressure rating 2.5 x full scale

VELOCITY MEASUREMENT

- **Method**
  - Radar
- **Range**
  - 0.23 to 6.10 m/s (0.75 to 20 ft/s)
- **Frequency Range**
  - 24.075 to 24.175 GHz, 15.2 mW (max.)
- **Accuracy**
  - ±0.5%; ±0.03 m/s (±0.1 ft/s)

DEPTH MEASUREMENT

- **Method**
  - Ultrasonic
- **Standard Operating Range from Flo-Dar® Housing to Liquid**
  - 0 to 152.4 cm (0 to 60 in.)
- **Optional Extended Level Operating Range from Transducer Face to Liquid**
  - 0 to 6.1 m (0 to 20 ft.) with 43.18 cm (17 in.) dead band, temperature compensated.
- **Accuracy**
  - ±1%; ±0.25 cm (±0.1 in.)

FLOW MEASUREMENT

- **Method**
  - Based on Continuity Equation
- **Accuracy**
  - ±5% of reading typical where flow is in a channel with uniform flow conditions and is not surcharged, ±1% full scale max.

SURCHARGE CONDITIONS DEPTH/VELOCITY DEPTH (Std with Flo-Dar® Sensor)

- **Surcharge depth supplied by Flo-Dar® sensor.**

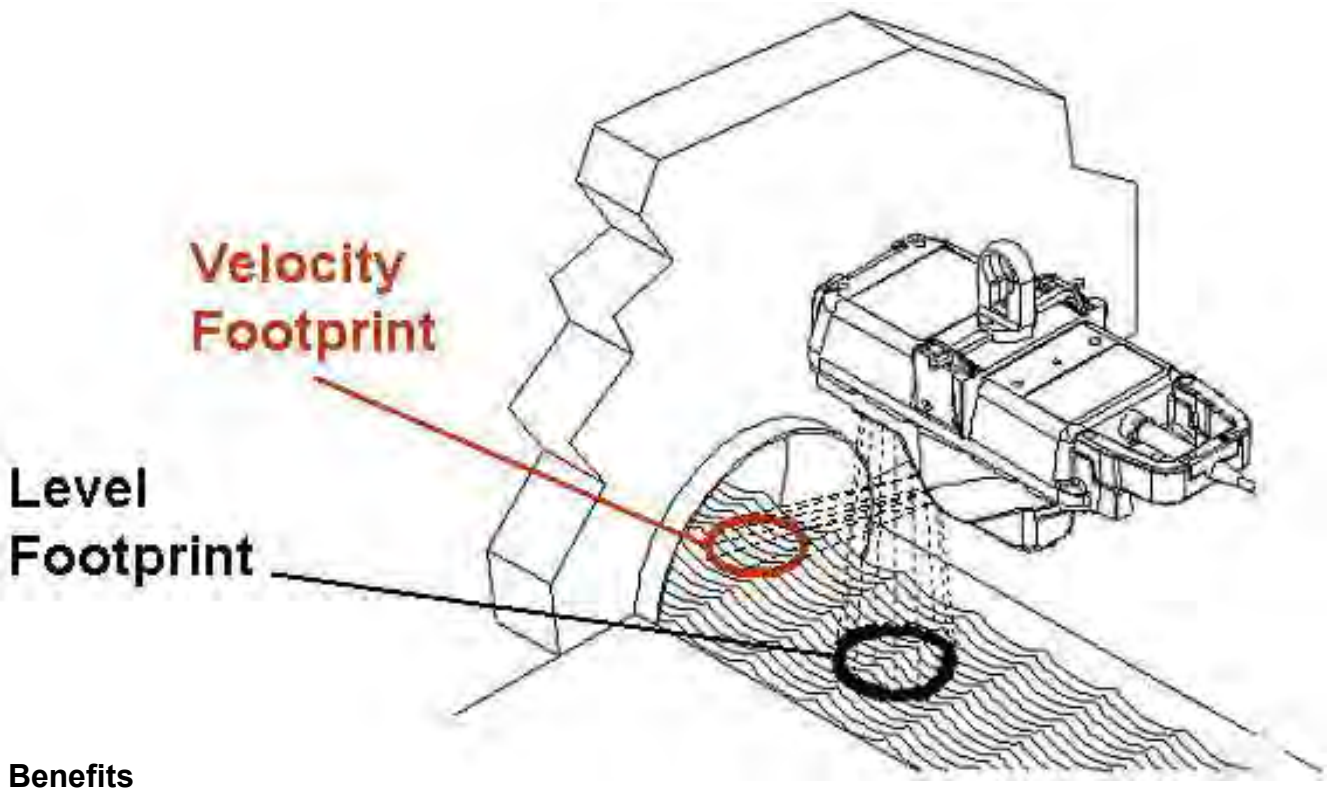
VELOCITY (Optional Surcharge Velocity Sensor)

- **Method**
  - Electromagnetic
- **Range**
  - ±4.8 m/s (±16 ft/s)
- **Accuracy**
  - ±0.15 ft/s or 4% of reading, whichever is greater.
- **Zero Stability**
  - ±0.05 ft/s

The Flo-Dar® Open Channel Flow Meters provide an innovative approach to open channel flow monitoring. Combining digital Doppler radar velocity sensing with ultrasonic pulse echo level sensing Flo-Dar® provides accurate open channel flow monitoring without the fouling problems associated with submerged sensors.

Perfect Solution for Difficult Flow Conditions:

- Flows with High Solids Content
- High Temperature Flows
- Caustic Flows
- Large Man-Made Channel
- High Velocities
- Shallow Flows



Benefits

1. Personnel have no contact with the flow during installation.
2. Maintenance caused by sensor fouling is eliminated
3. Field Replaceable/Interchangeable Sensors and Monitors

How It Works

Flo-Dar® transmits a digital Doppler radar beam that interacts with the fluid and reflects back signals at a different frequency than that which was transmitted. These reflected signals are compared with the transmitted frequency. The resulting frequency shift provides an accurate measure of the velocity and the direction of the flow. Level is detected by ultrasonic pulse echo. Flow is then calculated based on the Continuity Equation:

Q = V x A, Where Q = Flow, V = Average Velocity and A = Area

Accurate Flow Measurements

Flo-Dar® provides the user with highly accurate flow measurements under a wide range of flows and site conditions. By measuring the velocity of the fluid from above, Flo-Dar® eliminates accuracy problems inherent with submerged sensors including sensor disturbances, high solids content and distribution of reflectors.

US³ Company Information

US³ is a California Corporation **Federal ID No. 33-0729605** and qualifies as a Minority Business Enterprise. US³ has certified as an MBE with the California Public Utility Commission's authorized clearinghouse, **Verification Number: 97ES0008.**

US³ is a specialty service company for the Water & Waste Water industry, providing monitoring and control for Utilities since 1996. US³ is in the forefront of this industry by taking the proven technological approaches developed in other high-tech industries and applying them to protect one of our most precious natural resources - our water.

US³ engineers and technical personnel have applied advanced instrumentation system technology to water/wastewater open channel flow monitoring, pipeline evaluation, engineering, and data analysis, all coupled to the power of the Internet. This unique integrated systems approach allows the company to bring greater insight and intelligence to gathering information about water/wastewater system performance of our clients, and in turn, to support the fulfillment of their commitments to manage and cost effectively design, operate, and maintain these systems.

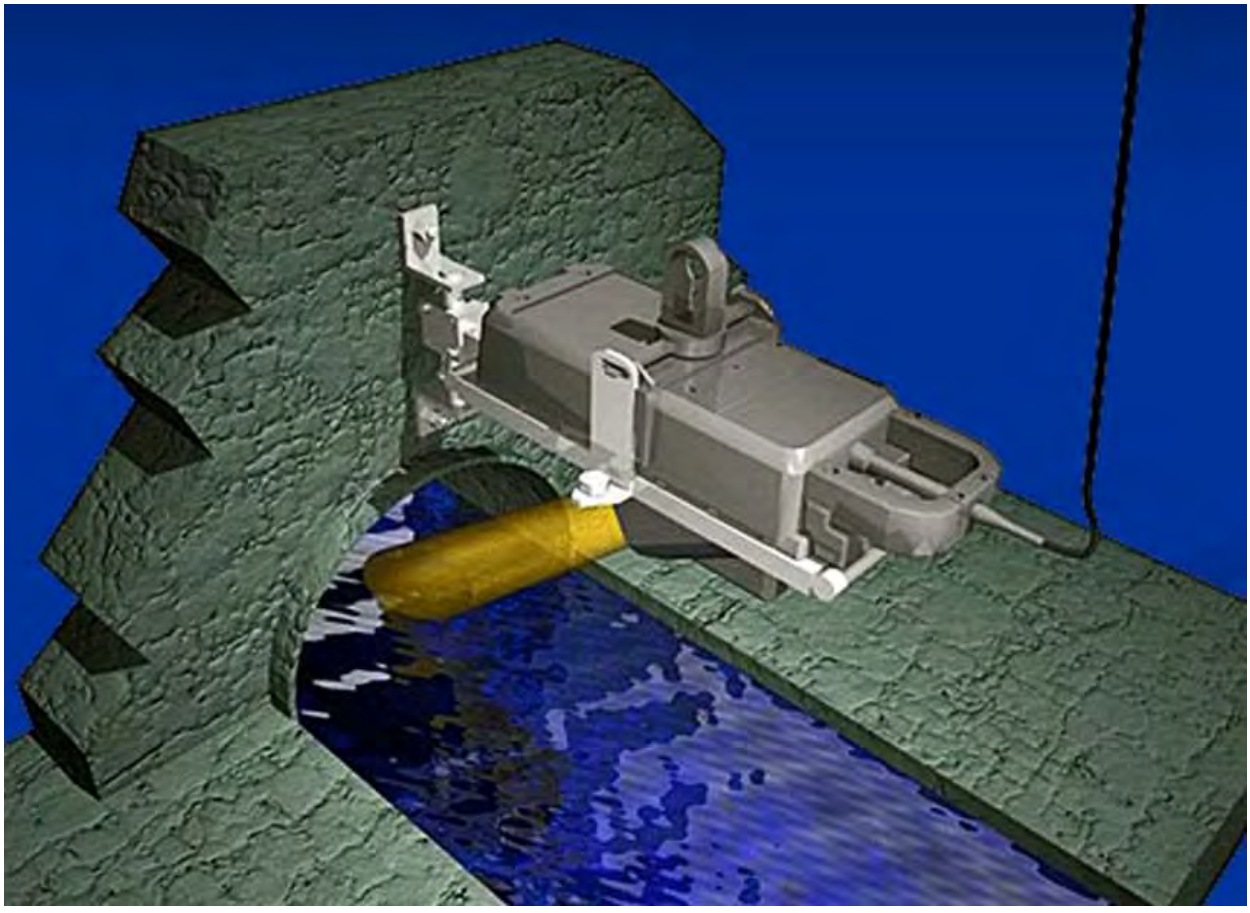


Figure: US³ utilizes exclusively Hach March-McBirney Flo-Dar® Meters

Moreover, ***US³*** supports Municipalities, Consulting Engineering firms and other water/waste water systems integrators by providing temporary technical services for engineering, software programming and technical site maintenance and calibration site support work, primarily in the Water and Waste Water industries.

Figure: All technicians are certified for Confined Space Entry.

SITE
(SECTION 1)

Description (Section 1.1)

Existing Site

The existing site is a retail center consisting of eight buildings and associated drive aisles and parking lots. The drainage for the project generally surface flows from the northwest to the southeast before being collected and conveyed by an on-site storm drain system to the Loftus Channel located along the eastern side of the site. A previous redevelopment of the center in 2011 constructed four concrete box culverts that replace the previous open trapezoidal channel allowing parking lots to be constructed over the box culverts.

The low flows are collected by 12" grated area drains at each catch basin location, and are then conveyed to vegetated swales located along the eastern boundary. These low flows are bio-treated by the vegetated swales and then directed to a drainage inlet that discharges to the Loftus box channel. Flows that exceed design storm flows are collected by the catch basins and conveyed directly to the Loftus Channel.

There are off-site flows coming onto the existing shopping center from the northerly property. The roof tributary areas have been determined by "best guess" since access was denied.

Proposed Site

The proposed project consists of redeveloping 2.2 acres of the approximately 13.7 acre existing retail site known as the Brea Plaza. The proposed project will involve the demolition of the movie theater building, as well as the asphalt drive aisles/parking areas, concrete walkways, and landscaped planters within the project area, and the construction of one eight-story apartment building.

The drainage patterns will remain consistent with the existing drainage patterns and a storm drain will be installed to convey the flows north of the proposed building to a 60" detention pipe located just upstream of the existing storm drain. This detention pipe is required to mitigate the increased flows due to the installation of the storm drain. The detention pipe has a 6" low flow outlet pipe that will restrict the flows up to the 2 year storm. A 12" pipe is proposed at the middle of the detention pipe to convey storm events larger than the 2 year storm. The outlets pipes are connected to a 24" proposed storm drain that will be an extension of the existing facility that connects to the existing Loftus box channel. To satisfy WQMP requirements, the on-site site low flows will be collected via an area drain system and conveyed to a modular wetlands system unit for treatment before flowing into the detention pipe and the extended storm drain. During larger storm events, high flows that are not captured by this area drain system will sheet flow to an existing catch basin that outlets into the Loftus box channel.

Methodology (Section 1.2)

The hydrologic calculations for the study were completed using AES software based on the Orange County Hydrology Manual methods. The Rational Method was used to determine the peak discharges for the pre- and post-developed conditions. The AES CH1 Unit Hydrograph Routing model was utilized to analyze the flows through the storage pipe.

The rational method flows at node 4 of the proposed hydrology map (Section 2.2) were input into the CH1 module to determine the outflow through the exit pipes and the depth of the storage required. The outflows from the CH1 were then added to the Rational Method as point flows using the Tc from the previous Rational Method and the Q's from the CH1 output.

In the hydrology calculations, we determined the flows for both the existing and proposed conditions. The sub areas and combined flows are shown on the hydrology maps in Section 2, while the raw output results are included in Sections 3.1 and 3.2 of this report.

The existing hydrology map shows two points (Points A & B) that are downstream of the proposed redevelopment. These points as shown on the existing hydrology map respectively correlate to nodes 5 and 10 shown on the proposed hydrology map.

We will analyze the pre and post flows at these points to determine the impact the proposed redevelopment will have on the existing drainage.

Results (Section 1.3)

Calculations

The values below are for the 2, 25 and 100 year storm events at the previously mentioned common downstream points "A" and "B".

Point "A"	2 Year	25 year	100 Year
Existing	9.78 CFS	21.78 CFS	28.09 CFS
Proposed	9.80 CFS	21.95 CFS	28.48 CFS
Increase (CFS) / %	0.02 CFS / 0.2%	0.17 CFS / 0.8%	0.39 CFS / 1.4%

Point "B"	2 Year	25 Year	100 Year
Existing	5.78 CFS	12.50 CFS	16.06 CFS
Proposed	5.78 CFS	12.50 CFS	16.06 CFS
Increase (CFS) / %	0.00 CFS / 0%	0.00 CFS / 0%	0.00 CFS / 0%

The proposed conditions result in a slight increase of flows at Point "A" due to putting the drainage into a pipe. The proposed pipe causes a reduction in the time of concentration (Tc) which subsequently increases the calculated flow. The 2 year, 25 year, and 100 year storms each experience a minimal increase of flows at Point "A" of 0.2%, 0.8%, and 1.4% respectively.

Due to maintaining the same drainage pattern, "Point B" flows are the same under existing and proposed conditions for all storm events.

Basin Routing

Basin Routing calculations were conducted to analyze how the proposed storm drain system will handle the 2 year, 25 year, and 100 year storm events (Sections 3.3 and 3.4).

The routing calculations show that during the 2 year storm event the detention facility will fill up to just under 2.0'. Since this is under the 12" outlet pipe, the outlet flows will be restricted to the 6" low flow pipe which reduces the flows and in turn allows for compliance with the hydromodification criteria summarized below.

The detention facility is also shown to adequately convey the 25 and 100 year storm events to the downstream storm drain. The previously mentioned 12" outlet pipe is being used during these two storm events, but outlet flows only experience a minimal increase of 0.8% and 1.4% respectively.

Hydromodification

For projects in North Orange County, Appendix I.4 of the Technical Guidance Document states that:

"Hydrologic Conditions of Concerns (HCOCs) are considered to exist if any streams located downstream from the project are determined to be potentially susceptible to hydromodification impacts and either of the following conditions exists:

- Post-development runoff volume for the 2-yr, 24-hr storm exceeds that of the pre- development[4] condition by more than 5 percent

  OR

- Time of concentration of post-development runoff for the 2-yr, 24-hr storm event is greater[5] than the time of concentration of the pre-development condition by more than 5 percent."

---

[4] In North Orange County (Order R8-2009-0030), predevelopment is defined as the existing conditions immediately prior to Project WQMP submittal.

[5] The North County Permit (Order R8-2009-0030), as adopted, provides the option of reducing Tc to less than the existing condition Tc (within 5 percent) as part of the primary and preferred option for mitigating HCOCs. However, a longer Tc is generally associated with natural conditions than urban conditions, and a longer Tc nearly universally results in lower concern for hydromodification impacts. In addition, it is not physically possible for a project to implement BMPs consistent with LID provisions of the permit without substantially increasing the Tc of the site. The use of retention BMPs results in water not discharged under design conditions, while the use of biotreatment BMPs general results in water not immediately discharged. Therefore, it would not generally be possible to mitigate HCOCs using the primary option for compliance described above while complying with LID requirements. This TGD therefore interprets this provision such that increases in Tc would be acceptable and reduction in Tc of more than 5 percent would not be acceptable. This interpretation is consistent with the overall goal of the permit to protect receiving waters from stormwater impacts to the MEP.

Appendix I.4 of the Technical Guidance Document further provides that if excess runoff volume from the 2-yr, 24-hr runoff event cannot feasibly be retained, the project shall "implement on-site or regional hydromodification controls such that the post- development runoff 2-yr, 24-hr peak flow rate is no greater than 110 percent of the pre- development runoff 2-yr, 24-hr peak flow rate."

With respect to the proposed project, not all of the downstream conveyance channels from the point of connection are "engineered, hardened, and regularly maintained to ensure design flow capacity." Therefore, the project has the potential for an HCOC. However, as set forth in the table below, the post-development run-off volume and time of concentration are within 105% of these values for the pre-development condition when assessing compliance at the location where runoff leaves the project site. These values were obtained utilizing the WinTR-55 Program (as required by Appendix IV.2 of the TGD). Copies of the WinTR-55 Program Hydrologic Analysis Reports are included in Section 3.5.

2-Yr / 24-Hr Storm	Runoff Volume	Time of Concentration (Tc)	Peak Flowrate
Pre-Development	13,496 CF	0.085 Hr (5.1 Minutes)	2.94 CFS
Post-Development	13,496 CF	0.088 Hr (5.28 Minutes)	2.94 CFS
Difference / %	0 CF / 0%	0.003 Hr / 3.53%	0 CFS / 0%

A hydrologic analysis conducted at the connection point of the new and existing storm drain (Point "A") reveals, however, that the post-development runoff peak flowrate would exceed, by more than 110%, the pre-development runoff peak flowrate for the two-year frequency storm event at this location. The proposed detention pipe, which will be installed just upstream of the existing storm drain, will reduce the post-development peak flowrate to 100.2% of the existing condition peak flowrate at this location, thereby mitigating the hydromodification impacts of the extended storm drain.

Conclusion (Section 1.4)

To summarize, storm flows from the 2.2 acres of proposed new development will be captured in localized area drains and conveyed to a 60" detention pipe. To satisfy WQMP requirements, the on-site site low flows will first be conveyed to a modular wetlands system unit for treatment before flowing into the detention pipe. In order to comply with HCOC requirements, the detention pipe will have a 6" low flow outlet to restrict outlet flows during the 2 year storm event. This results in a minimal increase of 0.02 CFS or 0.2% when compared to existing conditions. Outlet flows for the 25 year and 100 year storms also experience insignificant increases of 0.8% and 1.4%, respectively. Therefore the proposed storm drain system will be able to convey the 2 year, 25 year, and 100 year storms while limiting outlet flows and satisfying all drainage requirements.

-------------------------------------------------------------------------------

  Problem Descriptions:
```

```
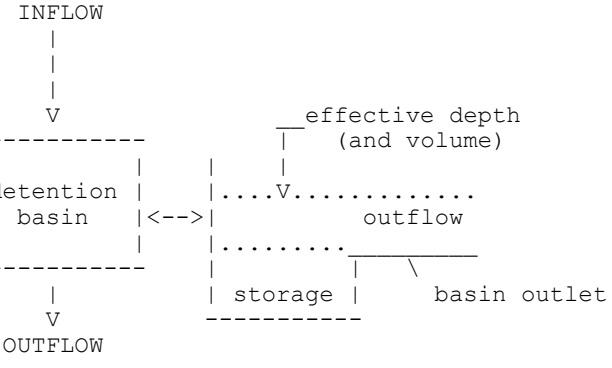
===============================================================================
     FLOW-THROUGH DETENTION BASIN MODEL

     SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:
     CONSTANT HYDROGRAPH TIME UNIT(MINUTES) =   10.940
     DEAD STORAGE(AF) =       0.00
     SPECIFIED DEAD STORAGE(AF) FILLED =       0.00
     ASSUMED INITIAL DEPTH(FEET) IN STORAGE BASIN =    0.00
```



```
     DEPTH-VS.-STORAGE AND DEPTH-VS.-DISCHARGE INFORMATION:
     TOTAL NUMBER OF BASIN DEPTH INFORMATION ENTRIES =   6
     *BASIN-DEPTH  STORAGE    OUTFLOW  **BASIN-DEPTH  STORAGE    OUTFLOW  *
     *   (FEET)  (ACRE-FEET)    (CFS)   **   (FEET)  (ACRE-FEET)    (CFS)   *
     *      0.000      0.000      0.000**      1.000      0.008      0.810*
     *      2.000      0.022      1.270**      3.000      0.037      3.670*
     *      4.000      0.050      6.630**      5.000      0.059      8.300*
-------------------------------------------------------------------------------
     BASIN STORAGE, OUTFLOW AND DEPTH ROUTING VALUES:
      INTERVAL   DEPTH   {S-O*DT/2}   {S+O*DT/2}
       NUMBER   (FEET)   (ACRE-FEET)  (ACRE-FEET)
           1     0.00       0.00000      0.00000
```

WHERE S=STORAGE(AF);O=OUTFLOW(AF/MIN.);DT=UNIT INTERVAL(MIN.)

DETENTION BASIN ROUTING RESULTS:

NOTE: COMPUTED BASIN DEPTH, OUTFLOW, AND STORAGE QUANTITIES OCCUR AT THE GIVEN TIME. BASIN INFLOW VALUES REPRESENT THE AVERAGE INFLOW DURING THE RECENT HYDROGRAPH UNIT INTERVAL.

--------------------------------------------------------------------------

 Problem Descriptions:
  25 YEAR STORM
  BASIN ROUTING

--------------------------------------------------------------------------

    RATIONAL METHOD CALIBRATION COEFFICIENT = 1.02
    TOTAL CATCHMENT AREA(ACRES) =    1.30
    SOIL-LOSS RATE, Fm,(INCH/HR) =  0.020
    LOW LOSS FRACTION = 0.330
    TIME OF CONCENTRATION(MIN.) = 10.36
    SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA
    ORANGE COUNTY "VALLEY" RAINFALL VALUES ARE USED
    RETURN FREQUENCY(YEARS) =  25
       5-MINUTE POINT RAINFALL VALUE(INCHES) =  0.40
      30-MINUTE POINT RAINFALL VALUE(INCHES) =  0.87
       1-HOUR   POINT RAINFALL VALUE(INCHES) =  1.15
       3-HOUR   POINT RAINFALL VALUE(INCHES) =  1.94
       6-HOUR   POINT RAINFALL VALUE(INCHES) =  2.71
      24-HOUR   POINT RAINFALL VALUE(INCHES) =  4.49

--------------------------------------------------------------------------

    TOTAL CATCHMENT   RUNOFF  VOLUME(ACRE-FEET) =     0.44
    TOTAL CATCHMENT SOIL-LOSS VOLUME(ACRE-FEET) =     0.04

**************************************************************************

--------------------------------------------------------------------------

 Problem Descriptions:
  100 YEAR STORM
  BASIN ROUTING

--------------------------------------------------------------------------

    RATIONAL METHOD CALIBRATION COEFFICIENT = 1.01
    TOTAL CATCHMENT AREA(ACRES) =    1.30
    SOIL-LOSS RATE, Fm,(INCH/HR) =  0.020
    LOW LOSS FRACTION = 0.280
    TIME OF CONCENTRATION(MIN.) = 10.19
    SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA
    ORANGE COUNTY "VALLEY" RAINFALL VALUES ARE USED
    RETURN FREQUENCY(YEARS) = 100
       5-MINUTE POINT RAINFALL VALUE(INCHES) =  0.52
      30-MINUTE POINT RAINFALL VALUE(INCHES) =  1.09
       1-HOUR   POINT RAINFALL VALUE(INCHES) =  1.45
       3-HOUR   POINT RAINFALL VALUE(INCHES) =  2.43
       6-HOUR   POINT RAINFALL VALUE(INCHES) =  3.36
      24-HOUR   POINT RAINFALL VALUE(INCHES) =  5.63

--------------------------------------------------------------------------

    TOTAL CATCHMENT   RUNOFF  VOLUME(ACRE-FEET) =     0.56
    TOTAL CATCHMENT SOIL-LOSS VOLUME(ACRE-FEET) =     0.05

**************************************************************************
  TIME     VOLUME       Q    0.        2.5       5.0       7.5      10.0

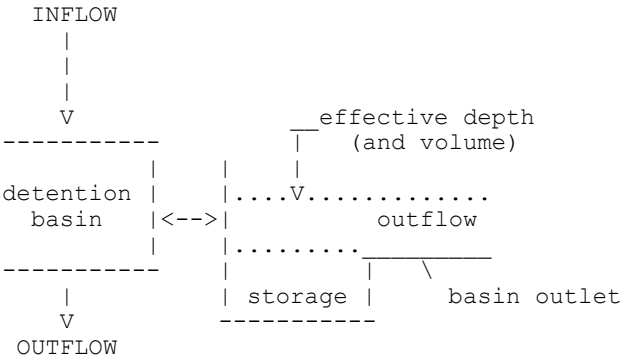
--------------------------------------------------------------------------------

 Problem Descriptions:
```

```
================================================================================
     FLOW-THROUGH DETENTION BASIN MODEL

     SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:
     CONSTANT HYDROGRAPH TIME UNIT(MINUTES) =   10.190
     DEAD STORAGE(AF) =       0.00
     SPECIFIED DEAD STORAGE(AF) FILLED =       0.00
     ASSUMED INITIAL DEPTH(FEET) IN STORAGE BASIN =    0.00
```



```
     DEPTH-VS.-STORAGE AND DEPTH-VS.-DISCHARGE INFORMATION:
     TOTAL NUMBER OF BASIN DEPTH INFORMATION ENTRIES =   6

Description — Hydrologic Soil Group

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options — Hydrologic Soil Group

Aggregation Method: Dominant Condition

Component Percent Cutoff: *None Specified*

This Water Quality Management Plan (WQMP) has been prepared for BPI Brea LLC by CA Engineering, Inc. The WQMP is intended to comply with the requirements of the County of Orange NPDES Stormwater Program requiring the preparation of the plan.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan , including the ongoing operation and maintenance of all best management practices (BMPs), and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with the current Orange County Drainage Area Management Plan (DAMP) and the intent of the non-point source NPDES Permit for Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the incorporated Cities of Orange County within the Santa Ana Region. Once the undersigned transfers its interest in the property, its successors-in-interest shall bear the aforementioned responsibility to implement and amend the WQMP. An appropriate number of approved and signed copies of this document shall be available on the subject site in perpetuity.

Section I Permit(s) and Water Quality Conditions of Approval or Issuance

Project Infomation			
Permit/Application No. (If applicable)	**PLN-2020-00034**	Grading or Building Permit No. (If applicable)	**Not Issued Yet**
Address of Project Site (or Tract Map and Lot Number if no address) and APN	**1639 E. Imperial Highway, Brea, CA 92821** **APN 319-102-25 & 319-102-32**		
Water Quality Conditions of Approval or Issuance			
Water Quality Conditions of Approval or Issuance applied to this project. (Please list verbatim.)	**No Conditions of Approval for the Project have been issued yet.**		
Was a Conceptual Water Quality Management Plan previously approved for this project?	**No. This document is the Preliminary WQMP for the Project.**		
Watershed-Based Plan Conditions			
Applicable Watershed	**San Gabriel-Coyote Creek Watershed**		
Provide applicable conditions from watershed - based plans including WIHMPs and TMDLS.	**WIHMP proposed for San Gabriel-Coyote Creek Watershed but not yet adopted per ocwatershed.com.** **TMDLs for Coyote Creek—Metals (Copper, Lead) and Indicator Bacteria** **TMDLs for San Gabriel River Estuary—Metals (Copper) and Indicator Bacteria**		

Section II Project Description

II.1 Project Description

Description of Proposed Project	
Development Category (From Model WQMP, Table 7.11-2; or -3):	**Significant Redevelopment Project.** Development Category No. 8 from Table 7.II-2 of the Model WQMP defines the following as a priority project for the North Orange County Permit Area: "All significant redevelopment projects, where significant redevelopment is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. If the redevelopment results in the addition or replacement of less than 50 percent of the impervious area on-site and the existing development was not subject to WQMP requirement, the numeric sizing criteria discussed in Section 7.II-2.0 only applies to the addition or replacement area. If the addition or replacement accounts for 50 percent or more of the impervious area, the Project WQMP requirements apply to the entire development." **The proposed project area is located on an already developed site measuring approximately 13.7 acres. The site is occupied by Brea Plaza, which consists of several commercial buildings, asphalt parking areas/drive aisles, concrete walkways, and landscaping. The existing site also includes four vegetated swales which were constructed to treat stormwater runoff as part of the initial redevelopment of Brea Plaza in 2011. The proposed project will involve the demolition of one building and the parking lot, concrete walkways, and landscape areas that are within the project area. The proposed area to be disturbed measures 95,864 square feet (2.20 acres), and comprises 16.1% of the overall site area. While the proposed project will add and/or replace 5,000 or more square feet of impervious surface on an already developed site, the work will result in the addition or replacement of less than 50% of the impervious area on the entire site. Accordingly, the proposed development is a Priority Project, but the numeric sizing criteria only applies to the proposed project area.**

<table>

<tr><td>Project Area (ft²): 95,864</td><td colspan="2">Number of Dwelling Units: 189</td><td colspan="2">SIC Code: 7011 and 6513</td></tr>
<tr><td rowspan="2">Project Area</td><td colspan="2">Pervious</td><td colspan="2">Impervious</td></tr>
<tr><td>Area
(acres or sq ft)</td><td>Percentage</td><td>Area
(acres or sq ft)</td><td>Percentage</td></tr>
<tr><td>Pre-Project Conditions</td><td>7,234 sq. ft.</td><td>7.5%</td><td>88,630 sq. ft.</td><td>92.5%</td></tr>
<tr><td>Post-Project Conditions</td><td>3,445 sq. ft.</td><td>3.6%</td><td>92,419 sq. ft.</td><td>96.4%</td></tr>
<tr><td>Drainage Patterns/Connections</td><td colspan="4">The overall site where the proposed project will be located is an approximately 13.7 acre existing retail center (Brea Plaza) consisting of six buildings and associated drive aisles and parking lots. The site topography slopes from the northwest corner towards the southeast, and generally ranges from 336± feet mean sea level (msl) in the northern region to 329± feet msl in the southern region.

Brea Plaza was previously redeveloped in 2011. At that time, four concrete box culverts were constructed to replace the previous open trapezoidal channel (Loftus Channel) allowing parking lots to be constructed over the box culverts. In addition, a Water Quality Management Plan, dated January 17, 2011, was prepared for the prior redevelopment project and was approved on February 3, 2011. Pursuant to the 2011 WQMP, the redevelopment project area was divided into four drainage areas, which measured 13.69 acres in total. The low flows from each drainage area delineated in the 2011 WQMP are collected via 12" grated area drains and then conveyed to vegetated swales located along the eastern boundary. After the storm flows are bio-treated in the vegetated swales, they are conveyed to a drainage inlet which discharges to the Loftus box channel. Flows that exceed the design storm flows bypass the grated area drains and are collected by catch basins and conveyed to Loftus Channel directly. An exhibit depicting the existing WQMP drainage areas and vegetated swales, and outlining the new proposed project area, is included in Section VI of this P-WQMP. A complete copy of the 2011 WQMP is attached to this P-WQMP as Exhibit M.</td></tr>
</table>

The drainage for the proposed project generally follows the existing flow characteristics. Storm flows draining from 2.53 acres of the property to the north sheet flow onto the proposed development. These off-site flows were unable to be routed around the proposed project due to grading and site constraints.

The existing on-site storm drain will be extended to the northern side of the proposed building. The off-site flows draining from the property to the north and the project area storm flows will be collected by grated inlets and conveyed to this extended storm drain system, resulting in the commingling of on and off-site flows. A diversion structure will be constructed on the new storm drain line which will convey the low flows to a Modular Wetlands System ("MWS") unit (a BIO-7: Proprietary Biotreatment BMP). The MWS unit will act as the project's LID BMP, and will be installed in a landscaped parking lot island located just south of the proposed project area. To mitigate the off-site flows, the proposed MWS unit will be upsized to treat the project flow rate of 0.502 cfs as well as half of the off-site water quality flow rate—which is 0.229 cfs—for a total treatment capacity of 0.731 cfs. In addition to LID treatment, FloGard catch basin inserts have been provided for Full Capture System compliance.

The diverted high flows and the treated low flows draining from the MWS unit will be conveyed to a 60" detention pipe. The detention pipe will outlet the flows, at a restricted rate, to the extended on-site storm drain. The extended storm drain will connect to the existing storm drain system which flows to Loftus Channel. The storm flow inlets, diversion structure, MWS unit, and detention pipe will be located as identified on the BMP Exhibit (Site Plan) included in Section VI of this P-WQMP.

Storm flows that exceed the capacity of the project area grated inlets will sheet flow to the existing catch basins located throughout the overall site, and these excess flows will be conveyed to Loftus Channel by the existing on-site storm drain system.

The site's storm water flows are discharged to Loftus Channel, which drains to Fullerton Creek, which flows to Coyote Creek, which in turn flows to the San Gabriel River Reach 1 (Estuary to Firestone), which outlets to the Pacific Ocean at the San Gabriel River Estuary. Hydrologic Conditions of Concern potentially exist for the project since not all of the downstream conveyance channels that will receive runoff from the

	project are engineered, hardened, and regularly maintained to ensure design flow capacity. (See Section II.3 of this P-WQMP.) However, since the post-development run-off volume and time of concentration are within 105% of these values for the pre-development condition, the project has no HCOCs pursuant to Section 7.II-2.4.2.2 of the Model WQMP and Section 2.2.3.1 of the Technical Guidance Document. (See the WinTR-55 Program Hydrologic Analysis Reports for the Brea Plaza Mixed-Use Project, copies of which are attached to this P-WQMP as Appendix L.)
Narrative Project Description: (Use as much space as necessary.)	The proposed project area is located in the northwest portion of Brea Plaza, an approximately 13.7 acre retail shopping center, located at 1639 E. Imperial Highway, in the City of Brea, California. Brea Plaza is bounded to the north by a Mercury Insurance office building, to the west by the Orange Freeway (SR 57), to the south by Imperial Highway, and to the east by Associated Road. The proposed project area measures approximately 95,864 square feet (2.20 acres), which comprises roughly 16.1% of the overall site. The project area is currently developed with a movie theater, asphalt drive aisles/parking areas, concrete walkways, and landscaping, and is 92.5% impervious. The proposed project will involve the demolition of the movie theater building, as well as the asphalt drive aisles/parking areas, concrete walkways, and landscaped planters within the project area, and the construction of one eight-story apartment building. The upper five stories of the building will contain 189 residential apartments, and the lower three stories will consist of concrete podium parking. A roof garden and pool will be located on the fourth level of the building. The project will also include asphalt drive aisles, a concrete loading dock area, and concrete walkways. In addition, the proposed development will construct a two-story office building over a portion of an existing multi-tenant retail building, and a one-story office building over a portion of the existing Custom Comfort Mattress store. The new offices have been excluded from the project area since they are being constructed over existing buildings and will not increase the disturbed area. The proposed building will have a footprint of approximately 62,316 square feet (which excludes the pervious roof garden areas), and the asphalt drive aisles and concrete areas will occupy 30,103 square feet,

	for a total impervious area of 92,419 square feet, or 96.4% of the project site. The project will also include 3,445 square feet of landscaping/pool area, for a total pervious area of 3.6% of the project site. There are no outdoor trash enclosures proposed for the project, and no streets, roads, or highway projects are planned to be constructed. There are no known materials or wastes that are anticipated to be used or produced during the operation of the Brea Plaza Mixed-Use Project that would be classified as "hazardous." Further, none of the materials to be used at the facility will be stored outside. The project will not violate any water quality standards because the project will be required to meet the City's NPDES permit discharge requirements.

II.2 Potential Stormwater Pollutants

Urban runoff from a developed site and storm water pollution associated with the runoff has the potential to contribute pollutants to the municipal storm drain system and ultimately to the tributary receiving waters. Pollutants that are commonly associated with urban development include suspended solids/sediment, nutrients, metals, microbial pathogens, oil and grease, toxic organic compounds, and trash and debris. The pollutants of concern for a specific project are based upon the pollutants identified by regulatory agencies as impairing receiving waters, and pollutants that are anticipated or potentially could be generated by the project based on the proposed land uses. Identifying the anticipated/potential pollutants will allow the project WQMP to appropriately assign BMPs to effectively mitigate storm water pollution prior to the runoff discharging off-site.

Table 2.1 of the Technical Guidance Document to Orange County's Model WQMP, dated May 19, 2011, lists the pollutants of concern generated by various land uses and is reprinted below:

Priority Project Categories and/or Project Features	General Pollutant Categories							
	Suspended Solid/ Sediments	Nutrients	Heavy Metals	Pathogens (Bacteria/ Virus)	Pesticides	Oil & Grease	Toxic Organic Compounds	Trash & Debris
Detached Residential Development	E	E	N	E	E	E	N	E
Attached Residential Development	E	E	N	E	E	E(2)	N	E
Commercial/ Industrial Development	E(1)	E(1)	E(5)	E(3)	E(1)	E	E	E
Automotive Repair Shops	N	N	E	N	N	E	E	E
Restaurants	E(1)(2)	E(1)	E(2)	E	E(1)	E	N	E
Hillside Development >5,000 ft²	E	E	N	E	E	E	N	E
Parking Lots	E	E(1)	E	E(4)	E(1)	E	E	E
Streets, Highways, & Freeways	E	E (1)	E	E(4)	E(1)	E	E	E
Retail Gasoline Outlets	N	N	E	N	N	E	E	E

E = expected to be of concern
N = not expected to be of concern

(1) Expected pollutant if landscaping exists on-site, otherwise not expected.
(2) Expected pollutant if the project includes uncovered parking areas, otherwise not expected.
(3) Expected pollutant if land use involves food or animal waste products, otherwise not expected.
(4) Bacterial indicators are routinely detected in pavement runoff.
(5) Expected if outdoor storage or metal roofs, otherwise not expected.

The table below identifies the potential pollutants of concern for the proposed Brea Plaza Mixed-Use Project, as set forth in Table 2.1 of the Technical Guidance Document under "Commercial/Industrial Development" and/or "Attached Residential Development:"

Pollutants of Concern			
Pollutant	Check One for each: E=Expected to be of concern N=Not Expected to be of concern		Additional Information and Comments
Suspended-Solid/ Sediment	**E**		Identified as an anticipated and/or potential pollutant for Commercial/Industrial Developments and/or Attached Residential Developments in Table 2.1 of the TGD.
Nutrients	**E**		Identified as an anticipated and/or potential pollutant for Commercial/Industrial Developments and/or Attached Residential Developments in Table 2.1 of the TGD.
Heavy Metals		**N**	Not identified as an anticipated and/or potential pollutant for Commercial/Industrial Developments and/or Attached Residential Developments in Table 2.1 of the TGD.
Pathogens (Bacteria/Virus)	**E**		Identified as an anticipated and/or potential pollutant for Commercial/Industrial Developments and/or Attached Residential Developments in Table 2.1 of the TGD.
Pesticides	**E**		Identified as an anticipated and/or potential pollutant for Commercial/Industrial Developments and/or Attached Residential Developments in Table 2.1 of the TGD.

Oil and Grease	**E**		Identified as an anticipated and/or potential pollutant for Commercial/Industrial Developments and/or Attached Residential Developments in Table 2.1 of the TGD.
Toxic Organic Compounds	**E**		Identified as an anticipated and/or potential pollutant for Commercial/Industrial Developments and/or Attached Residential Developments in Table 2.1 of the TGD.
Trash and Debris	**E**		Identified as an anticipated and/or potential pollutant for Commercial/Industrial Developments and/or Attached Residential Developments in Table 2.1 of the TGD.

Suspended Solids / Sediment consist of soils or other surficial materials that are eroded and then transported or deposited by wind, water, or gravity. Excessive sedimentation can increase turbidity, clog fish gills, reduce spawning habitat, lower young aquatic organisms survival rates, smother bottom dwelling organisms, and suppress aquatic vegetation growth. Sediments in runoff also transport other pollutants that adhere to them, including trace metals, polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), and phosphorus. The largest source of suspended solids/sediment is typically erosion from disturbed soils.

Nutrients include the macro-nutrients nitrogen and phosphorus. They commonly exist in the form of mineral salts dissolved or suspended in water and as particulate organic matter transported by storm water. Excessive discharge of nutrients to water bodies and streams can cause eutrophication, including excessive aquatic algae and plant growth, loss of dissolved oxygen, release of toxins in sediment, and significant swings in hydrogen ion concentration (pH). Primary sources of nutrients in urban runoff are fertilizers, trash and debris, and eroded soils. Urban areas with improperly managed landscapes can be substantial sources.

Pathogens (Bacteria / Viruses) include bacteria and viruses, which are ubiquitous microorganisms that thrive under a range of environmental conditions. Water containing excessive pathogenic bacteria and viruses can create a harmful environment for humans and aquatic life. The source of pathogenic bacteria and viruses is typically the transport of animal or human fecal wastes from the watershed, but pathogenic organisms do occur in the natural environment.

Pesticides include pesticides and herbicides comprised of chemical compounds commonly used to control nuisance growth or prevalence of organisms. Water containing excessive pesticides and herbicides can constitute a hazard to humans and aquatic life. Areas with improperly managed landscapes, including excessive or improper application of pesticides and/or herbicides, can be a substantial source.

Oil and Grease are characterized as high-molecular weight organic compounds. Elevated oil and grease content can decrease the aesthetic value of the water body, as well as the water quality. Introduction of these pollutants to water bodies may occur due to the wide uses and applications of some of these products in municipal, residential, commercial, industrial, and construction areas. Primary sources of oil and grease are petroleum hydrocarbon products, motor products from leaking vehicles, esters, oils, fats, waxes, and high molecular-weight fatty acids.

Toxic Organic Compounds include organic compounds (pesticides, solvents, hydrocarbons) which at toxic concentrations constitute a hazard to humans and aquatic organisms. Storm water coming into contact with organic compounds can transport excessive levels of organics to receiving waters. Dirt, grease, and grime retained in cleaning fluid or rinse water may also adsorb levels of organic compounds that are harmful or hazardous to aquatic life. Sources of organic compounds include landscape maintenance areas, vehicle maintenance areas, waste handling areas, and potentially most other urban areas.

Trash and Debris includes trash, such as paper, plastic, and various waste materials, that can typically be found throughout the urban landscape, and debris which includes waste products of natural origin which are not naturally discharged to water bodies such as landscaping waste, woody debris, etc. The presence of trash and debris may have a significant impact on the recreational value of a water body and upon the health of aquatic habitat.

II.3 Hydrologic Conditions of Concern

[X] No – Show map (and see discussion below)

[ ] Yes – Describe applicable hydrologic conditions of concern below. *Refer to Section 2.2.3 in the TGD.*

In the North Orange County permit area, where the Brea Plaza Mixed-Use Project is located, downstream channels are considered not susceptible to hydromodification, and therefore projects do not have the potential for an HCOC, if "[a]ll downstream conveyance channels that will receive runoff from the project are engineered, hardened, and regularly maintained to ensure design flow capacity, and no sensitive stream habitat areas will be affected." (See Section 7.II-2.3.3 of the Model WQMP.) If, however, any of the project's downstream channels are susceptible to hydromodification, Section 7.II-2.4.2.2 of the Model WQMP further provides that:

"A project does not have an HCOC if either of the following conditions is met:

- The volumes and time of concentration of stormwater runoff for the post-development condition do not significantly exceed those of the predevelopment condition for a two-year frequency storm event (a difference of five percent or less is considered insignificant).
- The site infiltrates at least the runoff from a two-year storm event."

With respect to the proposed Brea Plaza Mixed-Use Project, not all of the downstream conveyance channels from the point of connection are "engineered, hardened, and regularly maintained to ensure design flow capacity." Therefore, the project has the potential for an HCOC. (See the Susceptibility Analysis Map for San Gabriel-Coyote Creek Watershed, Figure 1 of the Technical Guidance Document, a copy of which is attached to this P-WQMP as Appendix C.)

However, as set forth in the chart below, both the volume and time of concentration of stormwater runoff for the post-development condition are within 105% of these values for the pre-development condition for a two-year frequency storm event. Therefore, the project does not have an HCOC. In addition, the post-development peak flowrate is identical to the pre-development peak flowrate for a two-year frequency storm event. (See the WinTR-55 Program Hydrologic Analysis Reports for the Brea Plaza Mixed-Use Project, copies of which are attached to this P-WQMP as Appendix L.)

2-Yr / 24-Hr Storm	Runoff Volume	Time of Concentration (Tc)	Peak Flowrate
Pre-Development	13,496 CF	0.085 Hr (5.1 Minutes)	2.94 CFS
Post-Development	13,496 CF	0.088 Hr (5.28 Minutes)	2.94 CFS
Difference / %	0 CF / 0%	0.003 Hr / 3.53%	0 CFS / 0%

II.4 Post Development Drainage Characteristics

The overall site where the proposed project will be located is an approximately 13.7 acre existing retail center (Brea Plaza) consisting of six buildings and associated drive aisles and parking lots. The site topography slopes from the northwest corner towards the southeast, and generally ranges from 336± feet mean sea level (msl) in the northern region to 329± feet msl in the southern region.

Brea Plaza was previously redeveloped in 2011. At that time, four concrete box culverts were constructed to replace the previous open trapezoidal channel (Loftus Channel) allowing parking lots to be constructed over the box culverts. In addition, a Water Quality Management Plan, dated January 17, 2011, was prepared for the prior redevelopment project and was approved on February 3, 2011. Pursuant to the 2011 WQMP, the redevelopment project area was divided into four drainage areas, which measured 13.69 acres in total. The low flows from each drainage area delineated in the 2011 WQMP are collected via 12" grated area drains and then conveyed to vegetated swales located along the eastern boundary. After the storm flows are bio-treated in the vegetated swales, they are conveyed to a drainage inlet which discharges to the Loftus box channel. Flows that exceed the design storm flows bypass the grated area drains and are collected by catch basins and conveyed to Loftus Channel directly. An exhibit depicting the existing WQMP drainage areas and vegetated swales, and outlining the new proposed project area, is included in Section VI of this P-WQMP. A complete copy of the 2011 WQMP is attached to this P-WQMP as Exhibit M.

The drainage for the proposed project generally follows the existing flow characteristics. Storm flows draining from 2.53 acres of the property to the north sheet flow onto the proposed development. These off-site flows were unable to be routed around the proposed project due to grading and site constraints.

The existing on-site storm drain will be extended to the northern side of the proposed building. The off-site flows draining from the property to the north and the project area storm flows will be collected by grated inlets and conveyed to this extended storm drain system, resulting in the commingling of on and off-site flows. A diversion structure will be constructed on the new storm drain line which will convey the low flows to a Modular Wetlands System ("MWS") unit (a BIO-7: Proprietary Biotreatment BMP). The MWS unit will act as the project's LID BMP, and will be installed in a landscaped parking lot island located just south of the proposed project area. To mitigate the off-site flows, the proposed MWS unit will be upsized to treat the project flow rate of 0.502 cfs as well as half of the off-site water quality flow rate—which is 0.229 cfs—for a total treatment capacity of 0.731 cfs. In addition to LID treatment, FloGard catch basin inserts have been

provided for Full Capture System compliance.

The diverted high flows and the treated low flows draining from the MWS unit will be conveyed to a 60"detention pipe. The detention pipe will outlet the flows, at a restricted rate, to the extended on-site storm drain. The extended storm drain will connect to the existing storm drain system which flows to Loftus Channel. The storm flow inlets, diversion structure, MWS unit, and detention pipe will be located as identified on the BMP Exhibit (Site Plan) included in Section VI of this P-WQMP.

Storm flows that exceed the capacity of the project area grated inlets will sheet flow to the existing catch basins located throughout the overall site, and these excess flows will be conveyed to Loftus Channel by the existing on-site storm drain system.

The site's storm water flows are discharged to Loftus Channel, which drains to Fullerton Creek, which flows to Coyote Creek, which in turn flows to the San Gabriel River Reach 1 (Estuary to Firestone), which outlets to the Pacific Ocean at the San Gabriel River Estuary. Hydrologic Conditions of Concern potentially exist for the project since not all of the downstream conveyance channels that will receive runoff from the project are engineered, hardened, and regularly maintained to ensure design flow capacity. (See Section II.3 of this P-WQMP.) However, since the post-development run-off volume and time of concentration are within 105% of these values for the pre-development condition, the project has no HCOCs pursuant to Section 7.II-2.4.2.2 of the Model WQMP and Section 2.2.3.1 of the Technical Guidance Document. (See the WinTR-55 Program Hydrologic Analysis Reports for the Brea Plaza Mixed-Use Project, copies of which are attached to this P-WQMP as Appendix L.)

II.5 Property Ownership/Management

All portions of the project and site are owned by BPI Brea LLC. The individual at BPI Brea LLC responsible for this project and all related water quality issues is Waad Nadhir. Mr. Nadhir's contact information is as follows: 417 S. Associated Road, Suite 313, Brea, California 92821; phone number (714) 990-5715; email address wnadhir@bosc.com. All maintenance responsibilities, including the implementation and maintenance of BMPs for the Brea Plaza Mixed-Use Project, shall be performed by BPI Brea LLC.

Section III Site Description

III.1 Physical Setting

Name of Planned Community/Planning Area (if applicable)	**N/A**
Location/Address	**1639 E. Imperial Highway, Brea, CA 92821**
General Plan Land Use Designation	**General Commercial (C-G)**
Zoning	**General Commercial (C-G)**
Acreage of Project Site	**2.20 acres**
Predominant Soil Type	**The project area is underlain by artificial fill soils extending to depths of 5½ to 8½± feet below the existing site grades. The artificial fill soils generally consist of medium dense to very dense silty fine sand with trace clay nodules and clayey fine sand, as well as stiff to hard silty clay and fine sandy clay. Under the artificial fill soils, native terrace deposits extend to at least the maximum depth explored of 50± feet below ground surface. The near surface terrace deposits (within the upper 5½ to 22± feet) generally consist of medium dense to very dense fine sand, silty fine sand and occasionally fine sandy silt. Terrace deposits extending deeper than 22± feet generally consist of very stiff to hard silty clay and fine sandy clay, as well as medium dense to very dense fine sand.** **(See pages 7-8 of Southern California Geotechnical, Inc.'s Geotechnical Feasibility Study, Proposed Brea Plaza Mixed Use Development, NWC Imperial Highway at Associated Road, Brea, California, dated July 30, 2020 (the "Geotechnical Report"), a copy of which is attached to this P-WQMP as Appendix E.)** **The soils in the project area are classified as HSG D. (See the NRCS Hydrologic Soils Groups Map for Orange County, Figure XVI-2a of the Technical Guidance Document, a copy of which is attached to this P-WQMP as Appendix G.)**

III.2 Site Characteristics

Site Characteristics	
Precipitation Zone	**0.90 inches** **(See Appendix D of this WQMP—Rainfall Zone Map for Orange County, Figure XVI-1, TGD)**
Topography	**Flat**
Drainage Patterns/Connections	The overall site where the proposed project will be located is an approximately 13.7 acre existing retail center (Brea Plaza) consisting of six buildings and associated drive aisles and parking lots. The site topography slopes from the northwest corner towards the southeast, and generally ranges from 336± feet mean sea level (msl) in the northern region to 329± feet msl in the southern region. Brea Plaza was previously redeveloped in 2011. At that time, four concrete box culverts were constructed to replace the previous open trapezoidal channel (Loftus Channel) allowing parking lots to be constructed over the box culverts. In addition, a Water Quality Management Plan, dated January 17, 2011, was prepared for the prior redevelopment project and was approved on February 3, 2011. Pursuant to the 2011 WQMP, the redevelopment project area was divided into four drainage areas, which measured 13.69 acres in total. The low flows from each drainage area delineated in the 2011 WQMP are collected via 12" grated area drains and then conveyed to vegetated swales located along the eastern boundary. After the storm flows are bio-treated in the vegetated swales, they are conveyed to a drainage inlet which discharges to the Loftus box channel. Flows that exceed the design storm flows bypass the grated area drains and are collected by catch basins and conveyed to Loftus Channel directly. An exhibit depicting the existing WQMP drainage areas and vegetated swales, and outlining the new proposed project area, is included in Section VI of this P-WQMP. A complete copy of the 2011 WQMP is attached to this P-WQMP as Exhibit M. The drainage for the proposed project generally follows the existing flow characteristics. Storm flows draining from 2.53 acres of the property to the north sheet flow onto the proposed development.

	These off-site flows were unable to be routed around the proposed project due to grading and site constraints. The existing on-site storm drain will be extended to the northern side of the proposed building. The off-site flows draining from the property to the north and the project area storm flows will be collected by grated inlets and conveyed to this extended storm drain system, resulting in the commingling of on and off-site flows. A diversion structure will be constructed on the new storm drain line which will convey the low flows to a Modular Wetlands System ("MWS") unit (a BIO-7: Proprietary Biotreatment BMP). The MWS unit will act as the project's LID BMP, and will be installed in a landscaped parking lot island located just south of the proposed project area. To mitigate the off-site flows, the proposed MWS unit will be upsized to treat the project flow rate of 0.502 cfs as well as half of the off-site water quality flow rate—which is 0.229 cfs—for a total treatment capacity of 0.731 cfs. In addition to LID treatment, FloGard catch basin inserts have been provided for Full Capture System compliance. The diverted high flows and the treated low flows draining from the MWS unit will be conveyed to a 60"detention pipe. The detention pipe will outlet the flows, at a restricted rate, to the extended on-site storm drain. The extended storm drain will connect to the existing storm drain system which flows to Loftus Channel. The storm flow inlets, diversion structure, MWS unit, and detention pipe will be located as identified on the BMP Exhibit (Site Plan) included in Section VI of this P-WQMP. Storm flows that exceed the capacity of the project area grated inlets will sheet flow to the existing catch basins located throughout the overall site, and these excess flows will be conveyed to Loftus Channel by the existing on-site storm drain system. The site's storm water flows are discharged to Loftus Channel, which drains to Fullerton Creek, which flows to Coyote Creek, which in turn flows to the San Gabriel River Reach 1 (Estuary to Firestone), which outlets to the Pacific Ocean at the San Gabriel River Estuary. Hydrologic Conditions of Concern potentially exist for the project since not all of the downstream conveyance channels that will receive runoff from the project are engineered, hardened, and regularly

	maintained to ensure design flow capacity. (See Section II.3 of this P-WQMP.) However, since the post-development run-off volume and time of concentration are within 105% of these values for the pre-development condition, the project has no HCOCs pursuant to Section 7.II-2.4.2.2 of the Model WQMP and Section 2.2.3.1 of the Technical Guidance Document. (See the WinTR-55 Program Hydrologic Analysis Reports for the Brea Plaza Mixed-Use Project, copies of which are attached to this P-WQMP as Appendix L.)
Soil Type, Geology, and Infiltration Properties	**The project area is underlain by artificial fill soils extending to depths of 5½ to 8½± feet below the existing site grades. The artificial fill soils generally consist of medium dense to very dense silty fine sand with trace clay nodules and clayey fine sand, as well as stiff to hard silty clay and fine sandy clay. Under the artificial fill soils, native terrace deposits extend to at least the maximum depth explored of 50± feet below ground surface. The near surface terrace deposits (within the upper 5½ to 22± feet) generally consist of medium dense to very dense fine sand, silty fine sand and occasionally fine sandy silt. Terrace deposits extending deeper than 22± feet generally consist of very stiff to hard silty clay and fine sandy clay, as well as medium dense to very dense fine sand. (See pages 7-8 of the Geotechnical Report attached to this P-WQMP as Appendix E.)** **Two infiltration tests were performed at the subject site. The infiltration rates at these locations range from 0.03 to 0.36 inches per hour. According to the infiltration report prepared by the geotechnical engineer for the project, "The major factors affecting the lack of infiltration at these borings is the presence of medium stiff to hard clayey soils at the test depths. Although an infiltration rate of 0.36 inches per hour was calculated for Infiltration Test No. I-2, negligible infiltration was measured at Infiltration Test Nos. I-1. Therefore, infiltration is not considered feasible for this site, due to the test results and the type of soils encountered at the boring locations." (See page 6 of Southern California Geotechnical, Inc.'s Results of Infiltration Testing, Proposed Brea Plaza Mixed Use Development, NWC Imperial Highway at Associated Road, Brea, California, dated July 30, 2020 (the "Infiltration Report"), a copy of which is attached to this P-WQMP as Appendix F.)**

Hydrogeologic (Groundwater) Conditions	**Groundwater was measured at a depth of 22½± feet below ground surface during the geotechnical engineer's borings. The historic high groundwater at the site is approximately 18± feet below ground surface. (See page 8 of the Geotechnical Report attached to this P-WQMP as Appendix E.)**
Geotechnical Conditions (relevant to infiltration)	**Infiltration at the site is infeasible due to the impermeable soils and low measured infiltration rate of 0.03 inches/hour. (See page 6 of the Infiltration Report attached to this P-WQMP as Appendix F.)**
Off-Site Drainage	**Storm flows draining from 2.53 acres of the property to the north sheet flow onto the proposed development. These off-site flows were unable to be routed around the proposed project due to grading and site constraints. A storm drain will be extended to the northern side of the proposed new building to collect the offsite flows, and storm water flows from the project area will be conveyed to the same extended storm drain system, which will result in the commingling of on and offsite flows. A diversion structure will be constructed on the new storm drain line to convey the low flows to a Modular Wetlands System unit for treatment. To mitigate the off-site flows, the proposed MWS unit will be upsized to treat the project flow rate of 0.502 cfs as well as half of the off-site water quality flow rate—which is 0.229 cfs—for a total treatment capacity of 0.731 cfs. In addition to LID treatment, FloGard catch basin inserts have been provided for Full Capture System compliance.**
Utility and Infrastructure Information	**The only utilities associated with the proposed development are the water, sewer, storm drain, gas and electrical connections. These laterals will supply the necessary utility connections for the proposed development. There are no main lines contained on the site. The proposed Modular Wetlands System unit will not interfere with any on-site utilities.**

III.3 Watershed Description

Receiving Waters	**The storm drain discharges to Loftus Diversion Channel, which drains to Fullerton Creek, which flows to Coyote Creek, which in turn flows to the San Gabriel River Reach 1 (Estuary to Firestone), which outlets to the Pacific Ocean at the San Gabriel River Estuary.**
303(d) Listed Impairments	**Coyote Creek: Copper-Dissolved (Metals); Indicator Bacteria (Pathogens); Iron (Metals); Malathion (Pesticides); pH; and Toxicity** **San Gabriel River—Reach 1 (Estuary to Firestone): pH and Water Temperature** **San Gabriel River Estuary : Copper (Metals); Dioxin (other Organics); Indicator Bacteria (Pathogens); Nickel (Metals); and Oxygen-Dissolved (Nutrients)**
Applicable TMDLs	**TMDLs for Coyote Creek—Metals (Copper, Lead) and Indicator Bacteria** **TMDLs for San Gabriel River Estuary—Metals (Copper) and Indicator Bacteria**
Pollutants of Concern for the Project	**Suspended-Solids/Sediment, Nutrients, Pathogens (Bacteria/Virus), Pesticides, Oil & Grease, Toxic Organic Compounds, Trash & Debris**
Environmentally Sensitive and Special Biological Significant Areas	**The proposed project does not directly discharge to, and is not within or adjacent to, an ESA.**

Section IV Best Management Practices (BMPs)

IV. 1 Project Performance Criteria

(NOC Permit Area only) Is there an approved WIHMP or equivalent for the project area that includes more stringent LID feasibility criteria or if there are opportunities identified for implementing LID on regional or sub-regional basis?	YES ☐	NO **X**
If yes, describe WIHMP feasibility criteria or regional/sub-regional LID opportunities.	**Not applicable. A WIHMP has been proposed for the San Gabriel-Coyote Creek Watershed, but it has not been adopted yet per ocwatershed.com.**	

Project Performance Criteria	
If HCOC exists, list applicable hydromodification control performance criteria (Section 7.II-2.4.2.2 in MWQMP)	**No HCOCs exist.**

<table>
<tr><td>List applicable LID performance criteria (Section 7.II-2.4.3 from MWQMP)</td><td>Priority Projects must infiltrate, harvest and use, evapotranspire, or biotreat/biofilter the 85th percentile of the 24-hour storm event (Design Capture Volume).</td></tr>
<tr><td>List applicable treatment control BMP performance criteria (Section 7.II-3.2.2 from MWQMP)</td><td>Capture and treat runoff from the 24-hour, 85th percentile storm event, and drawdown the captured/treated volume in 48 hours following end of event.</td></tr>
<tr><td>Calculate LID design storm capture volume for Project.</td><td>The project site contains one drainage area (Drainage Area A1), which utilizes a Modular Wetlands System unit as the selected LID BMP. </table>

IV.2. Site Design and Drainage

The overall site where the proposed project will be located is an approximately 13.7 acre existing retail center (Brea Plaza) consisting of six buildings and associated drive aisles and parking lots. The site topography slopes from the northwest corner towards the southeast, and generally ranges from 336± feet mean sea level (msl) in the northern region to 329± feet msl in the southern region.

Brea Plaza was previously redeveloped in 2011. At that time, four concrete box culverts were constructed to replace the previous open trapezoidal channel (Loftus Channel) allowing parking lots to be constructed over the box culverts. In addition, a Water Quality Management Plan, dated January 17, 2011, was prepared for the prior redevelopment project and was approved on February 3, 2011. Pursuant to the 2011 WQMP, the redevelopment project area was divided into four drainage areas, which measured 13.69 acres in total. The low flows from each drainage area delineated in the 2011 WQMP are collected via 12" grated area drains and then conveyed to vegetated swales located along the eastern boundary. After the storm flows are bio-treated in the vegetated swales, they are conveyed to a drainage inlet which discharges to the Loftus box channel. Flows that exceed the design storm flows bypass the grated area drains and are collected by catch basins and conveyed to Loftus Channel directly. An exhibit depicting the existing WQMP drainage areas and vegetated swales, and outlining the new proposed project area, is included in Section VI of this P-WQMP. A complete copy of the 2011 WQMP is attached to this P-WQMP as Exhibit M.

The drainage for the proposed project generally follows the existing flow characteristics. Storm flows draining from 2.53 acres of the property to the north sheet flow onto the proposed development. These off-site flows were unable to be routed around the proposed project due to grading and site constraints.

The existing on-site storm drain will be extended to the northern side of the proposed building. The off-site flows draining from the property to the north and the project area storm flows will be collected by grated inlets and conveyed to this extended storm drain system, resulting in the commingling of on and off-site flows. A diversion structure will be constructed on the new storm drain line which will convey the low flows to a Modular Wetlands System ("MWS") unit (a BIO-7: Proprietary Biotreatment BMP). The MWS unit will act as the project's LID BMP, and will be installed in a landscaped parking lot island located just south of the proposed project area. To mitigate the off-site flows, the proposed MWS unit will be upsized to treat the project flow rate of 0.502 cfs as well as half of the off-site water quality flow rate—which is 0.229 cfs—for a total treatment capacity of 0.731 cfs. In addition to LID treatment, FloGard catch basin inserts have been provided for Full Capture System compliance.

A proprietary biotreatment device was selected as the project's LID BMP because infiltration at the site is infeasible due to the impermeable soils and low measured infiltration rate of 0.03 inches/hour, and because there is insufficient available space to construct a traditional biotreatment planter.

The diverted high flows and the treated low flows draining from the MWS unit will be conveyed to a 60"detention pipe. The detention pipe will outlet the flows, at a restricted rate, to the extended on-site storm drain. The extended storm drain will connect to the existing storm drain system which flows to Loftus Channel. The storm flow inlets, diversion structure, MWS unit, and detention pipe will be located as identified on the BMP Exhibit (Site Plan) included in Section VI of this P-WQMP.

Storm flows that exceed the capacity of the project area grated inlets will sheet flow to the existing catch basins located throughout the overall site, and these excess flows will be conveyed to Loftus Channel by the existing on-site storm drain system.

The site's storm water flows are discharged to Loftus Channel, which drains to Fullerton Creek, which flows to Coyote Creek, which in turn flows to the San Gabriel River Reach 1 (Estuary to Firestone), which outlets to the Pacific Ocean at the San Gabriel River Estuary. Hydrologic Conditions of Concern potentially exist for the project since not all of the downstream conveyance channels that will receive runoff from the project are engineered, hardened, and regularly maintained to ensure design flow capacity. (See Section II.3 of this P-WQMP.) However, since the post-development run-off volume and time of concentration are within 105% of these values for the pre-development condition, the project has no HCOCs pursuant to Section 7.II-2.4.2.2 of the Model WQMP and Section 2.2.3.1 of the Technical Guidance Document. (See the WinTR-55 Program Hydrologic Analysis Reports for the Brea Plaza Mixed-Use Project, copies of which are attached to this P-WQMP as Appendix L.)

IV.3 LID BMP Selection and Project Conformance Analysis

Each sub-section below documents that the proposed design features conform to the applicable project performance criteria via check boxes, tables, calculations, narratives, and/or references to worksheets.

IV.3.1 Hydrologic Source Controls (HSCs)

Name	Included?
Localized on-lot infiltration	**No**
Impervious area dispersion (e.g. roof top disconnection)	**No**
Street trees (canopy interception)	**No**
Residential rain barrels (not actively managed)	**No**
Green roofs/Brown roofs	**No**
Blue roofs	**No**
Impervious area reduction (e.g. permeable pavers, site design)	**No**

The proposed BMP, BIO-7: Proprietary Biotreatment (Modular Wetlands System), will biotreat the entire LID Design Storm Capture Volume. Therefore, Hydrologic Source Controls are not required for the proposed Brea Plaza Mixed-Use Project.

IV.3.2 Infiltration BMPs

Name	Included?
Bioretention without underdrains	**No**
Rain gardens	**No**
Porous landscaping	**No**
Infiltration planters	**No**
Retention swales	**No**
Infiltration trenches	**No**
Infiltration basins	**No**
Drywells	**No**
Subsurface infiltration galleries	**No**
French drains	**No**
Permeable asphalt	**No**
Permeable concrete	**No**
Permeable concrete pavers	**No**

It is infeasible to infiltrate the LID Design Storm Capture Volume at the project site due to the impermeable soils and low measured infiltration rate of 0.03 inches/hour. (See page 6 of the Infiltration Report attached to this P-WQMP as Appendix F.)

The proposed LID BMP, BIO-7: Proprietary Biotreatment (Modular Wetlands System), will be utilized to biotreat the entire LID Design Storm Capture Volume.

See also Table 2.7 from the Technical Guidance Document below.

Table 2.7: Infiltration BMP Feasibility Worksheet

	Infeasibility Criteria	*Yes*	*No*
1	**Would Infiltration BMPs pose significant risk for groundwater related concerns?** Refer to Appendix VIII (Worksheet I) for guidance on groundwater-related Infiltration feasibility criteria.		**X**
Provide basis: Summarize findings of studies provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
2	Would Infiltration BMPs **pose significant risk of increasing risk of geotechnical hazards that cannot be mitigated to an acceptable level?** (Yes if the answer to any of the following questions is yes, as established by a geotechnical expert): • The BMP can only be located less than 50 feet away from slopes steeper than 15 percent. • The BMP can only be located less than eight feet from building foundations or an alternative setback. • A study prepared by a geotechnical professional or an available watershed study substantiates that storm water infiltration would potentially result in significantly increased risks of geotechnical hazards that cannot be mitigated to an acceptable level.		**X**
Provide basis: Summarize findings of studies, provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
3	Would infiltration of the DCV from drainage area **violate downstream water rights?**		**X**
Provide basis: Summarize findings of studies, provide reference to studies, calculations, maps, data sources, etc.			
	Partial Infeasibility Criteria	*Yes*	*No*
4	Is proposed infiltration facility **located on HSG D soils** or the site geotechnical investigation identifies presence of soil characteristics which support categorization as D soils?	**X**	
Provide basis:			

The soils in the project area are classified as HSG D. (See Section 3.5 of the Hydrology Report attached to this P-WQMP as Appendix L.)

Summarize findings of studies, provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

5	Is **measured infiltration rate below proposed facility less than 0.3 inches per hour?** This calculation shall be based on the methods described in Appendix VII.	**X**	

Provide basis:

Two infiltration tests were performed at the subject site. The infiltration rates at these locations range from 0.03 to 0.36 inches per hour. According to the infiltration report prepared by the geotechnical engineer for the project, "The major factors affecting the lack of infiltration at these borings is the presence of medium stiff to hard clayey soils at the test depths. Although an infiltration rate of 0.36 inches per hour was calculated for Infiltration Test No. I-2, negligible infiltration was measured at Infiltration Test Nos. I-1. Therefore, infiltration is not considered feasible for this site, due to the test results and the type of soils encountered at the boring locations." (See page 6 of the Infiltration Report attached to this P-WQMP as Appendix F.)

Summarize findings of studies, provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

6	Would **reduction of over predeveloped conditions cause impairments to downstream beneficial uses, such as change of seasonality of ephemeral washes or increased discharge of contaminated groundwater to surface waters?**		**X**

Provide citation to applicable study and summarize findings relative to the amount of infiltration that is permissible:

Summarize findings of studies, provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

7	Would **an increase in infiltration over predeveloped conditions cause impairments to downstream beneficial uses, such as change of seasonality of ephemeral washes or increased discharge of contaminated groundwater to surface waters?**		**X**

Provide citation to applicable study and summarize findings relative to the amount of infiltration that is permissible:

Summarize findings of studies, provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

Infiltration Screening Results (check box corresponding to result):			
8	Is there substantial evidence that infiltration from the project would result in a significant increase in I & I to the sanitary sewer that cannot be sufficiently mitigated? (See Appendix XVII) Provide narrative discussion and supporting evidence: Summarize findings of studies provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability. **The referenced document is not attached to the current version of the TGD.**		**X**
9	**If any answer from row 1-3 is yes**: infiltration of any volume Is not feasible within the DMA or equivalent. Provide basis: Summarize findings of infeasibility screening		**X**
10	**If any answer from row 4-7 is yes**, infiltration is permissible but is not presumed to be feasible for the entire DCV. Criteria for designing biotreatment BMPs to achieve the maximum feasible infiltration and ET shall apply. Provide basis: Summarize findings of infeasibility screening	**X**	
11	If all answers to rows 1 through 11 are no, infiltration of the full DCV is potentially feasible, BMPs must be designed to infiltrate the full DCV to the maximum extent practicable.	**N/A**	

IV.3.3 Evapotranspiration, Rainwater Harvesting BMPs

Name	Included?
All HSCs; *See Section IV.3.1*	**No**
Surface-based infiltration BMPs	**No**
Biotreatment BMPs	**No**
Above-ground cisterns and basins	**No**
Underground detention	**No**

The proposed BMP, BIO-7: Proprietary Biotreatment (Modular Wetlands System), will biotreat the entire LID Design Storm Capture Volume. Therefore, no other evapotranspiration or rainwater harvesting BMPs will be utilized at the site.

IV.3.4 Biotreatment BMPs

Name	Included?
Bioretention with underdrains	**No**
Stormwater planter boxes with underdrains	**No**
Rain gardens with underdrains	**No**
Constructed wetlands	**No**
Vegetated swales	**No**
Vegetated filter strips	**No**
Proprietary biotreatment systems	**Yes**
Wet extended detention basin	**No**
Dry extended detention basins	**No**

The proposed BIO-7: Proprietary Biotreatment BMP (Modular Wetlands System) will biotreat the entire LID Design Storm Capture Volume. (See Worksheet B below for the calculation of the DCV for Drainage Area A1.)

Pursuant to the MWS Linear 2.0 HGL Sizing Calculations table, a copy of which is included in Section VI of this P-WQMP, the proposed Modular Wetlands System unit (Model #MWS-L-8-24-V-High Capacity Model 3.6) has a treatment flowrate of 0.734 cfs.

The required design flowrate for the project area is 0.502 cfs (as calculated below). However, as discussed previously, to mitigate the off-site flows, the proposed MWS unit will be upsized to treat the project flow rate of 0.502 cfs as well as half of the off-site water quality flow rate—which is 0.229 cfs (as calculated below)—for a total minimum design flow rate of 0.731 cfs. Therefore, the treatment flowrate of the selected BIO-7: Proprietary Biotreatment BMP (Modular Wetlands System unit) exceeds the design flowrate for the project's Drainage Area A1.

DRAINAGE AREA A1 – MODULAR WETLANDS SYSTEM

Worksheet B: Simple Design Capture Volume Sizing Method

Step 1: Determine the design capture storm depth used for calculating volume				
1	Enter design capture storm depth from Figure III.1, *d* (inches)	d=	0.90	inches
2	Enter the effect of provided HSCs, d_{HSC} (inches) (Worksheet A)	d_{HSC}=	0.00	inches
3	Calculate the remainder of the design capture storm depth, $d_{remainder}$ (inches) (Line 1 – Line 2)	$d_{remainder}$=	0.90	inches
Step 2: Calculate the DCV				
1	Enter Project area tributary to BMP (s), *A* (acres)	A=	2.20	acres
2	Enter Project Imperviousness, *imp* (unitless)	imp=	0.964	
3	Calculate runoff coefficient, *C= (0.75 x imp) + 0.15*	C=	0.87	
4	Calculate runoff volume, V_{design}= *(C x* $d_{remainder}$ *x A x 43560 x (1/12))*	V_{design}=	6,253	cu-ft

Flow-based Proprietary BMP Sizing (TGD Appendix III.3.3)

Q = C × i × A x 43,560 ft^2/ac / (12 in/ft x 3600 sec/hr)

For the project area:

Q = design flowrate, cfs

C = runoff coefficient = 0.87 (see Worksheet B above)

i = design intensity (inches) = 0.26 in/hr

A = tributary area (acres) = 2.20 acres

Q = 0.87 x 0.26 in/hr x 2.20 ac x 43,560 ft^2/ac / (12 in/ft x 3600 sec/hr) = 0.502 cfs

For the offsite area draining onto the project area (2.53 acres / 71.9% impervious):

Q = design flowrate, cfs

C = runoff coefficient = (0.75 x 0.719) + 0.15 = 0.69

i = design intensity (inches) = 0.26 in/hr

A = tributary area (acres) = 2.53 acres

Q = 0.69 x 0.26 in/hr x 2.53 ac x 43,560 ft^2/ac / (12 in/ft x 3600 sec/hr) = 0.458 cfs

Off-site design flowrate to be treated: 50% x 0.458 cfs = 0.229 cfs

Total design flowrate to be treated: 0.502 cfs + 0.229 cfs = 0.731 cfs

Treatment flowrate of MWS Unit (Model #MWS-L-8-24-V-High Capacity Model 3.6) = 0.734 cfs > 0.731 cfs

IV.3.5 Hydromodification Control BMPs

Hydromodification Control BMPs	
BMP Name	**BMP Description**

With respect to the proposed Brea Plaza Mixed-Use Project, not all of the downstream conveyance channels from the point of connection are "engineered, hardened, and regularly maintained to ensure design flow capacity." Therefore, the project has the potential for an HCOC. (See the Susceptibility Analysis Map for San Gabriel-Coyote Creek Watershed, Figure 1 of the Technical Guidance Document, a copy of which is attached to this P-WQMP as Appendix C.)

However, since the post-development run-off volume and time of concentration are within 105% of these values for the pre-development condition, the project has no HCOCs pursuant to Section 7.II-2.4.2.2 of the Model WQMP and Section 2.2.3.1 of the Technical Guidance Document. (See the WinTR-55 Program Hydrologic Analysis Reports for the Brea Plaza Mixed-Use Project, copies of which are attached to this P-WQMP as Appendix L.) The compliance point for this assessment of the project's pre- and post-development runoff volume and time of concentration is located where runoff leaves the project site, pursuant to Section 5.3.1 of the Technical Guidance Document.

While the project area generates no HCOCs, a Hydromodification Control BMP (a 60" detention pipe with a restricted outlet) will be utilized for the overall site to mitigate the increased flows caused by the installation of the extended storm drain. Currently, the off-site flows and project area high flows sheet flow across the overall site and are collected by catch basins that discharge to Loftus Channel. In the proposed condition, the off-site flows, project area low flows, and a portion of the project area high flows will be conveyed by the extended 24" storm drain pipe to the existing storm drain, which is located to the south of the proposed project area, in the southern portion of the overall site. (The low flows will be diverted to a Modular Wetland System unit for treatment prior to being discharged to the existing storm drain.) At the connection point of the new and existing storm drain, the post-development runoff peak flowrate would exceed, by more than 110%, the pre-development runoff peak flowrate for the two-year frequency storm event. Therefore, the proposed detention pipe will be installed just upstream of the existing storm drain to reduce the post-development peak flowrate to 100.2% of the existing condition peak flowrate. (See the Project Hydrology Report.)

IV.3.6 Regional/Sub-Regional LID BMPs

Regional/Sub-Regional LID BMPs
The proposed BMP, BIO-7: Proprietary Biotreatment (Modular Wetlands System), will biotreat the entire LID Design Storm Capture Volume. Therefore, no Regional/Sub-Regional LID BMPs will be utilized at the site.

IV.3.7 Treatment Control BMPs

Treatment Control BMPs	
BMP Name	**BMP Description**
The proposed LID BMP, BIO-7: Proprietary Biotreatment (Modular Wetlands System), will biotreat the entire LID Design Storm Capture Volume. In addition, the proposed Modular Wetlands System unit and the proposed filters for the grated inlets (FloGard +Plus Insert Filters) have been certified by the State Water Resources Control Board as trash treatment control devices that meet the Full Capture System definition. (See the State Water Resources Control Board's Certified Full Capture System List of Trash Treatment Control Devices (Updated May 2021), a copy of which is included in Section VI of this P-WQMP.) No other Treatment Control BMPs will be utilized at the site.	

IV.3.8 Non-Structural Source Control BMPs

Non-Structural Source Control BMPs				
Identifier	Name	Check One		If not applicable, state brief reason
		Included	Not Applicable	
N1	Education for Property Owners, Tenants and Occupants	X		
N2	Activity Restrictions	X		
N3	Common Area Landscape Management	X		
N4	BMP Maintenance	X		
N5	Title 22 CCR Compliance (How development will comply)		X	Not applicable. The project site will not require Title 22 CCR compliance since the operation of the project site will not generate hazardous wastes as part of its routine operations.
N6	Local Industrial Permit Compliance		X	Not applicable.
N7	Spill Contingency Plan		X	Not applicable. No hazardous waste is expected to be stored on site.
N8	Underground Storage Tank Compliance		X	Not applicable. No underground storage tanks are proposed.
N9	Hazardous Materials Disclosure Compliance		X	Not applicable. The project will not handle or dispose of hazardous materials as part of its routine operations.
N10	Uniform Fire Code Implementation		X	Not applicable. No hazardous waste is expected to be stored on site.
N11	Common Area Litter Control	X		
N12	Employee Training	X		
N13	Housekeeping of Loading Docks	X		
N14	Common Area Catch Basin Inspection	X		

N15	Street Sweeping Private Streets and Parking Lots	X		
N16	Retail Gasoline Outlets		X	Not applicable. None proposed.

N1 Property Owner Education

The Owner will review the environmental awareness educational materials and BMP Fact Sheets included in Appendices A and B of this Project WQMP prior to or during the commencement of operations at the Brea Plaza Mixed-Use Project. Among other things, these materials will inform the Owner of the impacts of dumping oil, paints, solvents or other potentially harmful chemicals into the storm drain; the proper use and management of fertilizers, pesticides and herbicides in landscaping practices; the impacts of littering and improper watering; and proper maintenance practices for the business.

N2 Activity Restrictions

The Owner shall identify surface water quality protection requirements to ensure that surface water quality activities shall be conducted in conformance with the Project WQMP as it relates to the handling and disposal of contaminants and, through the use of employee training manuals or another equally effective method, shall develop corresponding use restrictions. The use restrictions shall include, but not be limited to, the following:

(a) The Owner shall periodically provide to his employees environmental awareness education materials made available by the local municipalities. These materials will describe the use of chemicals (including car wash chemicals, pesticides and fertilizers) that should be limited to the covered property with no discharge of specified wastes via hosing or other direct discharge to gutter, catch basins, settling basins and storm drains.

(b) The Owner shall require the use of fertilizers and pesticides to be in strict conformance with City and County guidelines.

(c) The Owner shall prohibit the discharge of leaf litter, grass clippings, trash, animal wastes, paint, or masonry wastes to streets or storm drain systems.

(d) The Owner shall prohibit hosing down any paved surface where the result would be the flow of non-storm water into the street or storm drains.

(e) The Owner shall prohibit oil changing or other auto repairs that could discharge pollutants.

N3 Common Area Landscape Management

Management programs will be designed and implemented by the Owner to maintain all of the landscaped areas within the project site. These programs will include how to mitigate the potential dangers of fertilizer and pesticide usage, require that fertilizer and pesticide usage shall be consistent with City and County guidelines, discuss utilization of water-efficient landscaping practices, require that maintenance be consistent with the County Water Conservation Resolution or the City equivalent, and detail the proper disposal of landscape wastes.

The Owner shall implement irrigation and landscaping which will utilize moisture sensors, smart timers, rain shut-off valves and the grouping of plants with similar water requirements in order to prevent excess irrigation and its corresponding runoff. The Owner shall also maintain erosion control devices on the property until adequate vegetation coverage has been achieved following establishment of the landscape plantings.

The Owner shall also perform periodic inspection and adjustment of the automatic irrigation system for valve and sprinkler operation and irrigation spray heads for damage as necessary to ensure adequate moisture delivery without allowing overspray or excessive watering that would lead to unnecessary runoff.

N4 BMP Maintenance

The Owner shall be responsible for implementation of each applicable non-structural BMP as well as scheduling inspection and maintenance cleaning of all applicable structural BMP facilities. The Owner, through its landscape or other maintenance contractor, will be responsible for inspection and maintenance activities in landscape areas. Debris and other water pollutants will be controlled, contained and disposed of in a proper manner by the maintenance contractor. Refer to Section V.

N11 Common Area Litter Control

The Owner will be responsible to provide or arrange for weekly sweeping and trash pick-up at the site. The Owner may contract with its landscape or other maintenance contractor to perform these duties, as well as to conduct weekly inspections of all trash receptacles to make sure lids are closed and pick-up of any excess trash on the ground has occurred, and to note and investigate any trash disposal violations.

N12 Employee Training

The Owner shall establish an education program for his employees and/or contractors to inform and train personnel engaged in maintenance activities regarding the impact of dumping oil, paints, solvents or other potentially harmful chemicals into the storm drain; the proper use of fertilizers and pesticides in landscaping maintenance practices; and the impacts of littering and improper water disposal.

N13 Housekeeping of Loading Docks

The Owner shall keep the loading docks in a clean and orderly condition through a regular program of sweeping and litter control and immediate cleanup of spills and broken containers. Cleanup procedures should minimize or eliminate the use of water. If wash water is used, it must be disposed of in an approved manner and not discharged to the storm drain system. If there are no other alternatives, discharge of non-stormwater flow to the sanitary sewer must be at an acceptable discharge point such as a cleanout, oil/water separator, grease interceptor, or industrial sewer connection. All sewer discharges shall be in accordance with the Orange County Sanitation District's Wastewater Discharge Regulations and/or Washwater Disposal Guidelines.

N14 Common Area Catch Basin Inspection

All catch basin inlets will be inspected and maintained by Owner at least once a year, prior to the rainy season (no later than October 1st of each year), and before and after all major storms

N15 Parking Lot Sweeping

The Owner, through his employees and/or landscaping or other maintenance contractor, shall sweep all parking areas and drive aisles within the project at least once a month, or more often if needed. Debris, sediment and trash picked up during sweeping operations will be deposited in the trash receptacles.

IV.3.9 Structural Source Control BMPs

Structural Source Control BMPs				
Identifier	**Name**	**Check One**		**If not applicable, state brief reason**
		Included	**Not Applicable**	
S1	Provide storm drain system stenciling and signage	X		
S2	Design and construct outdoor material storage areas to reduce pollution introduction		X	Not applicable. No outdoor material storage areas are proposed.
S3	Design and construct trash and waste storage areas to reduce pollution introduction		X	Not applicable. No outdoor trash and waste storage areas are proposed.
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control	X		
S5	Protect slopes and channels and provide energy dissipation		X	Not applicable. The project site has no slopes or channels.
	Incorporate requirements applicable to individual priority project categories (from SDRWQCB NPDES Permit)			
S6	Dock areas	X		
S7	Maintenance bays		X	Not applicable. No maintenance bays are proposed.
S8	Vehicle wash areas		X	Not applicable. No vehicle wash areas are proposed.
S9	Outdoor processing areas		X	Not applicable. No outdoor processing areas are proposed.
S10	Equipment wash areas		X	Not applicable. No equipment wash areas are proposed.
S11	Fueling areas		X	Not applicable. No fueling areas are proposed.
S12	Hillside landscaping		X	Not applicable. No hillside landscaping is proposed.
S13	Wash water control for food preparation areas		X	Not applicable. No food preparation areas are proposed.
S14	Community car wash racks		X	Not applicable. No community car wash racks are proposed.

Structural BMPs shall be installed by the Owner at the Brea Plaza Mixed-Use Project through the construction and development of the project. For instance, irrigation systems shall be designed by a licensed landscape architect and installed by a qualified contractor to the specifications and standards of the City of Brea and the County of Orange. Thereafter, these structural source control BMPs shall be maintained by the Owner.

S1 Provide Storm Drain System Stenciling and Signage (CASQA SD-13)

The Owner is responsible for labeling all of the project's storm drain inlets and catch basins with the phrase, "NO DUMPING! DRAINS TO OCEAN," or an equally effective phrase, to alert the public to the destination of pollutants discharged into storm water. This signage is to be included on the project plans. The signage and stenciling shall be maintained for legibility by the Owner.

S4 Use Efficient Irrigation Systems and Landscape Design (CASQA SD-12)

The Owner shall direct its landscaping architect to design the timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the municipal storm drain system. The following methods to reduce excessive irrigation runoff shall be incorporated where determined applicable and feasible:

1. Employing rain shutoff devices to prevent irrigation after precipitation.

2. Designing irrigation systems to each landscape area's specific water requirements.

3. Using flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.

4. Implementing a landscape plan consistent with County Water Conservation Resolution or city equivalent, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

5. The timing and application methods of irrigation water shall be designed to minimize the runoff of excess irrigation water into the municipal storm drain system.

6. Employing other comparable, equally effective, methods to reduce irrigation water runoff.

7. Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider other design features, such as:

   (a) Use mulches (such as wood chips or shredded wood products) in planter areas without ground cover to minimize sediment in runoff.

   (b) Install appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant material where possible and/or as recommended by the landscape architect.

(c) Leave a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible.

(d) Choose plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth.

The Owner shall be responsible for implementing and maintaining efficient irrigation systems for all landscaping including but not limited to provisions for water sensors, programmable irrigation cycles, and rain shutoff devices. The irrigation systems shall comply with local and statewide ordinances related to irrigation efficiency. The Owner shall also be responsible for the installation and maintenance of all landscape areas utilizing similar planting materials with similar water requirements to reduce excess irrigation runoff.

S6 Loading Dock Areas (CASQA SD-31)

The Owner shall ensure that the loading /unloading dock areas shall include the following:

1. Covered loading dock areas, or drainage designed to preclude run-on and runoff, unless the material loaded and unloaded at the docks does not have potential to contribute to stormwater pollution, and this use is ensured for the life of the facility.

2. Direct connections to the municipal storm drain system from below grade loading docks (truck wells) or similar structures are prohibited. Stormwater can be discharged through a permitted connection to the storm drain system with a treatment control BMP applicable to the use.

3. Other comparable and equally effective features that prevent unpermitted discharges to the municipal storm drain system.

4. Housekeeping of loading docks shall be consistent with N13.

IV.4 Alternative Compliance Plan (If Applicable)

The proposed BMP, BIO-7: Proprietary Biotreatment (Modular Wetlands System), will biotreat the entire LID Design Storm Capture Volume. Therefore, no Alternative Compliance Plan will be utilized at the site.

IV.4.1 Water Quality Credits

<table>
<tr><th colspan="5">Description of Proposed Project</th></tr>
<tr><td colspan="5">Project Types that Qualify for Water Quality Credits (Select all that apply):</td></tr>
<tr><td colspan="2">☐ Redevelopment projects that reduce the overall impervious footprint of the project site.</td><td colspan="2">☐Brownfield redevelopment, meaning redevelopment, expansion, or reuse of real property which may be complicated by the presence or potential presence of hazardous substances, pollutants or contaminants, and which have the potential to contribute to adverse ground or surface WQ if not redeveloped.</td><td>☐ Higher density development projects which include two distinct categories (credits can only be taken for one category): those with more than seven units per acre of development (lower credit allowance); vertical density developments, for example, those with a Floor to Area Ratio (FAR) of 2 or those having more than 18 units per acre (greater credit allowance).</td></tr>
<tr><td colspan="2">☐ Mixed use development, such as a combination of residential, commercial, industrial, office, institutional, or other land uses which incorporate design principles that can demonstrate environmental benefits that would not be realized through single use projects (e.g. reduced vehicle trip traffic with the potential to reduce sources of water or air pollution).</td><td colspan="2">☐ Transit-oriented developments, such as a mixed use residential or commercial area designed to maximize access to public transportation; similar to above criterion, but where the development center is within one half mile of a mass transit center (e.g. bus, rail, light rail or commuter train station). Such projects would not be able to take credit for both categories, but may have greater credit assigned</td><td>☐ Redevelopment projects in an established historic district, historic preservation area, or similar significant city area including core City Center areas (to be defined through mapping).</td></tr>
<tr><td>☐Developments with dedication of undeveloped portions to parks, preservation areas and other pervious uses.</td><td>☐ Developments in a city center area.</td><td>☐ Developments in historic districts or historic preservation areas.</td><td>☐ Live-work developments, a variety of developments designed to support residential and vocational needs together – similar to criteria to mixed use development; would not be able to take credit for both categories.</td><td>☐ In-fill projects, the conversion of empty lots and other underused spaces into more beneficially used spaces, such as residential or commercial areas.</td></tr>
<tr><td>Calculation of Water Quality Credits (if applicable)</td><td colspan="4">The proposed BMP, BIO-7: Proprietary Biotreatment (Modular Wetlands System), will biotreat the entire LID Design Storm Capture Volume. Therefore, no Water Quality Credits will be claimed for the Project WQMP.</td></tr>
</table>

IV.4.2 Alternative Compliance Plan Information

The proposed BMP, BIO-7: Proprietary Biotreatment (Modular Wetlands System), will biotreat the entire LID Design Storm Capture Volume. Therefore, no Alternative Compliance Plan will be utilized at the site.

Section V Inspection/Maintenance Responsibility for BMPs

BPI Brea LLC (the owner of the project), shall assume all BMP inspection and maintenance responsibilities for the Brea Plaza Mixed-Use Project located in Brea, California.

CONTACT NAME	**Waad Nadhir**
COMPANY	**BPI Brea LLC**
ADDRESS	**417 S. Associated Road, Suite 313** **Brea, CA 92821**
PHONE /EMAIL	**(714) 990-5715) / wnadhir@bosc.com**

A copy of the Operation and Maintenance Plan is attached to the Project WQMP as Appendix H.

A Maintenance Covenant and Agreement (with copies of the Operation and Maintenance Plan and WQMP Site Plan attached) will be recorded in the County Recorder's Office with respect to the Project Property prior to approval of the Final WQMP.

Should the maintenance responsibility be transferred at any time during the operational life of the Brea Plaza Mixed-Use Project, a formal notice of transfer shall be submitted to the City of Brea at the time the maintenance responsibility of the property subject to this WQMP is transferred. A Notice of Transfer of Responsibility form is included in Appendix K. The transfer of responsibility shall be incorporated into this WQMP as an amendment.

CERTIFICATION OF BMP MAINTENANCE

The Owner shall verify BMP implementation and ongoing maintenance through inspection, self-certification, survey, or other equally effective measure. The forms that may be used to record the implementation, maintenance, and inspection of BMPs are included in Appendices I and J. A BMP Maintenance Self-Certification Form for the City of Brea, which is to be completed by the Owner and the party responsible for the maintenance and operation of the BMPs, is included in Appendix O.

The Owner shall retain operation, inspection and maintenance records of the project's BMPs, and these records will be made available to the City or County upon request. All records must be maintained for at least five (5) years after the recorded inspection date for the lifetime of the project.

LONG-TERM FUNDING FOR BMP MAINTENANCE

The Owner shall be responsible for long-term funding for BMP maintenance. BMPs shall be maintained throughout the year, and inspection and maintenance activities shall be documented in this WQMP.

ACCESS EASEMENT FOR CITY / COUNTY INSPECTION

None. The City of Brea may conduct verifications to assure that implementation and appropriate maintenance of structural and non-structural BMPs prescribed within this WQMP are taking place at the project site.

The table below identifies the party responsible for performing the inspection and maintenance of each BMP for the Brea Plaza Mixed-Use Project, and details the maintenance and inspection activities to be performed and the frequency with which each shall be performed.

BMP Inspection/Maintenance			
BMP	**Reponsible Party(s)**	**Inspection/ Maintenance Activities Required**	**Minimum Frequency of Activities**
N1. Education for Property Owners, Tenants and Occupants (Non-Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	Educational materials shall be reviewed and made available on-site prior to commencement of operation of the Brea Plaza Redevelopment Project. Refer to Appendices A and B of the Project WQMP for a list of applicable educational materials and BMP Fact Sheets.	Upon occupancy, and annually thereafter
N2. Activity Restrictions (Non-Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	The owner shall include in any employee training manual, lease, and/or CCRs the on-site activity restrictions, including but not limited to: (1) No hosing down of any paved surface where the water would flow directly to the street, gutter or storm drain; (2) No car washing outside of established community car wash areas (if any); and (3) No disposal of wash water in the street, gutter or storm drain—all wash water must be disposed of in a mop sink or an area with a floor drain.	Continuous

BMP Inspection/Maintenance			
BMP	**Reponsible Party(s)**	**Inspection/ Maintenance Activities Required**	**Minimum Frequency of Activities**
N3. Common Area Landscape Management (Non-Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	Ongoing maintenance must be consistent with the City's adopted water conservation ordinance, plus fertilizer and pesticide usage consistent with the "County Management Guidelines for Use of Fertilizers and Pesticides." Landscaping irrigation systems shall be adjusted and properly maintained to prevent over spray runoffs. Green waste shall not be blown or swept into, or disposed of, in the street, gutter, public right-of-way, or storm drain catch basins or inlets. Leaf blowers, if used, shall be used to move green waste into piles so they can be swept and picked up and disposed of in green waste recycling containers.	Weekly

BMP Inspection/Maintenance			
BMP	**Reponsible Party(s)**	**Inspection/ Maintenance Activities Required**	**Minimum Frequency of Activities**
N4. BMP Maintenance (Non-Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	Owner shall be responsible for implementation of each non- structural BMP and regularly scheduled cleaning of all BMP structural facilities. Records of inspections and BMP maintenance shall be maintained by the owner and shall be available for review upon request.	Continuous
N11. Common Area Litter Control (Non-Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	An adequate number of trash receptacles shall be provided at the site. Litter patrol, emptying of trash receptacles at the facility, violation investigation, reporting and other litter control activities shall be performed in conjunction with maintenance activities.	Weekly

BMP Inspection/Maintenance			
BMP	**Reponsible Party(s)**	**Inspection/ Maintenance Activities Required**	**Minimum Frequency of Activities**
N12. Employee Training (Non-Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	The Owner shall prepare a training manual(s) for existing and future employees. The manual should include information on non-point source pollution and how to use proper Best Management Practices (BMPs) to minimize runoff pollutants. Training shall be provided upon hire and at regular intervals thereafter.	Upon hire, and annually thereafter

BMP Inspection/Maintenance			
BMP	**Reponsible Party(s)**	**Inspection/ Maintenance Activities Required**	**Minimum Frequency of Activities**
N13. Housekeeping of Loading Docks (Non-Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	Keep all fluids indoors. Clean up spills immediately and keep spills from entering storm drain system. Cleanup procedures should minimize or eliminate the use of water. If wash water is used, it must be disposed of in an approved manner and not discharged to the storm drain system. If there are no other alternatives, discharge of non-stormwater flow to the sanitary sewer must be at an acceptable discharge point such as a cleanout, oil/water separator, grease interceptor, or industrial sewer connection. All sewer discharges shall be in accordance with the Orange County Sanitation District's Wastewater Discharge Regulations and/or Washwater Disposal Guidelines. Area shall be inspected weekly for proper containment and shall be swept weekly.	Continuous

BMP Inspection/Maintenance			
BMP	**Reponsible Party(s)**	**Inspection/ Maintenance Activities Required**	**Minimum Frequency of Activities**
N14. Common Area Catch Basin Inspection (Non-Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	The catch basins will be inspected, cleaned and maintained on an annual basis, in the early fall prior to the start of the rainy season, and before and after all major storms.	Annually, and before and after all major storms
N15. Street Sweeping Private Streets and Parking Lots (Non-Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	The Owner or his agent must sweep all drive aisles and parking areas regularly (minimum monthly), and prior to the storm season (no later than October 1st each year). Sweeping shall be done with a vacuum-type sweeper. Under no circumstances are outdoor areas/lots to be rinsed or washed with water unless said rinse/wash water is collected and disposed of properly (i.e. into the sewer).	Monthly

BMP Inspection/Maintenance			
BMP	**Reponsible Party(s)**	**Inspection/ Maintenance Activities Required**	**Minimum Frequency of Activities**
S1. Provide Storm Drain System Stenciling and Signage (Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	Storm drain stencils shall be inspected for legibility, at a minimum, once prior to the storm season, and no later than October 1st of each year. Those signs determined to be illegible will be re-stenciled as soon as possible.	Annually
S4. Use Efficient Irrigation Systems & Landscape Design (Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	Projects shall design the timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the municipal storm drain system. Irrigation practices shall comply with local and statewide ordinances related to irrigation efficiency.	Continuous

BMP Inspection/Maintenance			
BMP	**Reponsible Party(s)**	**Inspection/ Maintenance Activities Required**	**Minimum Frequency of Activities**
S6. Loading Dock Areas (Structural Source Control BMP)	**BPI Brea LLC (Owner) 417 S. Associated Road, Suite 313 Brea, CA 92821 Contact: Waad Nadhir wnadhir@bosc.com**	Keep all fluids indoors. Clean up spills immediately and keep spills from entering storm drain system. Cleanup procedures should minimize or eliminate the use of water. If wash water is used, it must be disposed of in an approved manner and not discharged to the storm drain system. If there are no other alternatives, discharge of non-stormwater flow to the sanitary sewer must be at an acceptable discharge point such as a cleanout, oil/water separator, grease interceptor, or industrial sewer connection. All sewer discharges shall be in accordance with the Orange County Sanitation District's Wastewater Discharge Regulations and/or Washwater Disposal Guidelines. Area shall be inspected weekly for proper containment and shall be swept weekly.	Continuous

BMP Inspection/Maintenance			
BMP	**Reponsible Party(s)**	**Inspection/ Maintenance Activities Required**	**Minimum Frequency of Activities**
Treatment Control BMP #1 Proprietary Catch Basin Insert Filters (Kristar FloGard +Plus Insert Filters or Approved Equivalent)	**BPI Brea LLC (Owner)** **417 S. Associated Road, Suite 313** **Brea, CA 92821** **Contact: Waad Nadhir** **wnadhir@bosc.com**	Twice a year, prior to and after the rainy season, and after major storm events, the catch basin insert filters shall be visually inspected for damage, have all sediment and debris removed, and the filter medium pouches shall be replaced if necessary. The owner may conduct this maintenance himself, or may enter into a service contract for the maintenance of the insert filters as detailed in the Kristar FloGard +Plus Specs/Maintenance Requirements brochure, located in Section VI of the Project WQMP.	Every Six Months (Approximately April 1st and October 1st) and Immediately After Major Storm Events

BMP Inspection/Maintenance			
BMP	**Reponsible Party(s)**	**Inspection/ Maintenance Activities Required**	**Minimum Frequency of Activities**
LID BMP # 1 (Biotreatment) Modular Wetlands System (BIO-7: Proprietary Biotreatment)	**BPI Brea LLC (Owner)** **417 S. Associated Road, Suite 313** **Brea, CA 92821** **Contact: Waad Nadhir** **wnadhir@bosc.com**	The Modular Wetlands System is to be maintained monthly as part of routine landscape maintenance activities, and shall be visually inspected monthly and immediately after major storm events to remove collected litter and foreign debris from the screening device. Every 12 to 24 months, the following maintenance should be performed: remove sediment from the Separation Chamber, replace the Cartridge Filter Media, and replace the Drain Down Filter Media. Additional/detailed maintenance instructions for the Modular Wetlands System are contained in the "Maintenance Guidelines for Modular Wetlands System," a copy of which is included in Section VI of the project WQMP.	Screening Device Maintenance: Monthly And Immediately After Major Storm Events Separation Chamber, Cartridge Filter Media, and Drain Down Filter Media Maintenance: Every 12 to 24 Months

Section VI BMP Exhibit (Site Plan)

VI.1 BMP Exhibit (Site Plan)

The following documents are included in this section of the WQMP:

- **Vicinity Map**
- **BMP Exhibit (Site Plan) for Proposed Project**
- **Existing WQMP Drainage Areas Exhibit (Overall Site)**
- **Kristar FloGard +PLUS Catch Basin Insert Filter Specifications**
- **BMP Fact Sheet—BIO-7: Proprietary Biotreatment**
- **Modular Wetlands System Stormwater Biofiltration Guide (Specifications and Sizing Options)**
- **MWS Linear 2.0 HGL Sizing Calculations Table**
- **Standard Detail for Proposed Modular Wetlands System Unit (MWS-L-8-24-V High Capacity Model 3.6)**
- **Maintenance Guidelines for Modular Wetlands System**
- **State Water Resources Control Board's Certified Full Capture System List of Trash Treatment Control Devices (Updated May 2021)**

VI.2 Submittal and Recordation of Water Quality Management Plan

Following approval of the Final Project-Specific WQMP, the approved WQMP (including BMP Exhibit, Operations and Maintenance (O&M) Plan, and Appendices) shall be recorded in the Orange County Clerk-Recorder's Office prior to close-out of grading and/or building permit. Educational Materials are not required to be included.

KRISTAR FLOGARD +PLUS CATCH BASIN INSERT FILTER SPECIFICATIONS

Innovative stormwater management products

KRISTAR

FloGard® +PLUS

Catch Basin Insert Filter

FloGard®+PLUS Catch Basin Insert Filter

GENERAL FILTER CONFIGURATION

FloGard®+PLUS catch basin insert filter shall provide solids filtration through a filter screen or filter liner, and hydrocarbon capture shall be effected using a non-leaching absorbent material contained in a pouch or similar removable restraint. Hydrocarbon absorbent shall not be placed at an exposed location at the entry to the filter that would allow blinding by debris and sediment without provision for self-cleaning in operation.

Filter shall conform to the dimensions of the inlet in which it is applied, allow removal and replacement of all internal components, and allow complete inspection and cleaning in the field.

FLOW CAPACITY

Filter shall provide two internal high-flow bypass locations that in total exceed the inlet peak flow capacity. Filter shall provide filtered flow capacity in excess of the required "first flush" treatment flow. Unit shall not impede flow into or through the catch basin when properly sized and installed.

MATERIALS

Filter support frame shall be constructed of type 304 stainless steel. Filter screen, when used in place of filter liner, shall be type 304 or 316 stainless steel, with an apparent opening size of not less than 4 U.S. mesh. Filter liner, when used in place of filter screen, shall be woven polypropylene geotextile fabric liner with an apparent opening size (AOS) of not less than 40 U.S. mesh as determined by ASTM D 4751. Filter liner shall include a support basket of polypropylene geogrid with stainless steel cable reinforcement.

Filter frame shall be rated at a minimum 25-year service life. All other materials, with the exception of the hydrocarbon absorbent, shall have a rated service life in excess of 2 years.

FloGard®+PLUS TEST RESULTS SUMMARY

Testing Agency	% TSS Removal	% Oil and Grease Removal	% PAH Removal
UCLA	80	70 to 80	
U of Auckland Tonking & Taylor Ltd. (for city of Auckland)	78 to 95		
U of Hawaii (for city of Honolulu)	80		20 to 40

FEATURES

- Easy to install, inspect and maintain
- Can be retrofitted to existing drain catch basins – or used in new projects
- Economical and efficient
- Catches pollutants where they are easiest to catch (at the inlet)
- No standing water – minimizes vector, bacteria and odor problems
- Can be incorporated as part of a "Treatment Train"

BENEFITS

- Lower installation, inspection and maintenance costs
- Versatile installation applications
- Higher return on investment
- Allows for installation on small and confined sites
- Minimizes vector, bacteria and odor problems
- Allows user to target specific pollutants

Innovative stormwater management products

FloGard® +PLUS
Catch Basin Insert Filter

KRISTAR

INSTALLATION AND MAINTENANCE
Filter shall be installed and maintained in accordance with manufacturer's general instructions and recommendations.

PERFORMANCE
Filter shall provide 80% removal of total suspended solids (TSS) from treated flow with a particle size distribution consistent with typical urban street deposited sediments. Filter shall capture at least 70% of oil and grease and 40% of total phosphorus (TP) associated with organic debris from treated flow. Unit shall provide for isolation of trapped pollutants, including debris, sediments, and floatable trash and hydrocarbons, from bypass flow such that re-suspension and loss of pollutants is minimized during peak flow events.

NOTES:

1. FloGard® filter body is prefabricated from polypropylene woven monofilament geotextile.
2. All metal components shall be constructed from stainless steel Type 304.
3. Refer to Specifier Chart for catch basin and filter sizing.
4. Filter inserts are supplied with optional "clip-in" filter pouches utilizing fossil rock™ filter medium for the collection and retention of petroleum hydrocarbons (oils & greases).
5. FloGard® filter inserts and fossil rock™ filter medium pouches must be maintained in accordance with manufacturer recommendations.
6. Catch basin depth must not allow filter body to to obstruct outlet pipe . See sheet 2 of 2.

GENERAL SPECIFICATIONS FOR MAINTENANCE OF *FLO-GARD+PLUS*® CATCH BASIN INSERT FILTERS

SCOPE:

Federal, State and Local Clean Water Act regulations and those of insurance carriers require that stormwater filtration systems be maintained and serviced on a recurring basis. The intent of the regulations is to ensure that the systems, on a continuing basis, efficiently remove pollutants from stormwater runoff thereby preventing pollution of the nation's water resources. These specifications apply to the FloGard+Plus® Catch Basin Insert Filter.

RECOMMENDED FREQUENCY OF SERVICE:

Drainage Protection Systems (DPS) recommends that installed Flo-Gard+Plus® Catch Basin Insert Filters be serviced on a recurring basis. Ultimately, the frequency depends on the amount of runoff, pollutant loading and interference from debris (leaves, vegetation, cans, paper, etc.); however, it is recommended that each installation be serviced a minimum of three times per year, with a change of filter medium once per year. DPS technicians are available to do an on-site evaluation, upon request.

RECOMMENDED TIMING OF SERVICE:

DPS guidelines for the timing of service are as follows:

1. For areas with a definite rainy season: Prior to, during and following the rainy season.
2. For areas subject to year-round rainfall: On a recurring basis (at least three times per year).
3. For areas with winter snow and summer rain: Prior to and just after the snow season and during the summer rain season.
4. For installed devices not subject to the elements (washracks, parking garages, etc.): On a recurring basis (no less than three times per years).

SERVICE PROCEDURES:

1. The catch basin grate shall be removed and set to one side. The catch basin shall be visually inspected for defects and possible illegal dumping. If illegal dumping has occurred, the proper authorities and property owner representative shall be notified as soon as practicable.
2. Using an industrial vacuum, the collected materials shall be removed from the liner. (Note: DPS uses a truck-mounted vacuum for servicing Flo-Gard+Plus® catch basin inserts.)
3. When all of the collected materials have been removed, the filter medium pouches shall be removed by unsnapping the tether from the D-ring and set to one side. The filter liner, gaskets, stainless steel frame and mounting brackets, etc. shall be inspected for continued serviceability. Minor damage or defects found shall be corrected on-the-spot and a notation made on the Maintenance Record. More extensive deficiencies that affect the efficiency of the filter (torn liner, etc.), if approved by the customer representative, will be corrected and an invoice submitted to the representative along with the Maintenance Record.
4. The filter medium pouches shall be inspected for defects and continued serviceability and replaced as necessary and the pouch tethers re-attached to the liner's D-ring. See below.
5. The grate shall be replaced.

REPLACEMENT AND DISPOSAL OF EXPOSED FILTER MEDIUM AND COLLECTED DEBRIS

The frequency of filter medium pouch exchange will be in accordance with the existing DPS-Customer Maintenance Contract. DPS recommends that the medium be changed at least once per year. During the appropriate service, or if so determined by the service technician during a non-scheduled service, the filter medium pouches will be replaced with new pouches. Once the exposed pouches and debris have been removed, DPS has possession and must dispose of it in accordance with local, state and federal agency requirements.

DPS also has the capability of servicing all manner of catch basin inserts and catch basins without inserts, underground oil/water separators, stormwater interceptors and other such devices. All DPS personnel are highly qualified technicians and are confined space trained and certified. Call us at (888) 950-8826 for further information and assistance.

BMP FACT SHEET—

BIO-7: PROPRIETARY BIOTREATMENT

BIO-7: Proprietary Biotreatment

Proprietary biotreatment devices are devices that are manufactured to mimic natural systems such as bioretention areas by incorporating plants, soil, and microbes engineered to provide treatment at higher flow rates or volumes and with smaller footprints than their natural counterparts. Incoming flows are typically filtered through a planting media (mulch, compost, soil, plants, microbes, etc.) and either infiltrated or collected by an underdrain and delivered to the storm water conveyance system. Tree box filters are an increasingly common type of proprietary biotreatment device that are installed at curb level and filled with a bioretention type soil. For low to moderate flows they operate similarly to bioretention systems and are bypassed during high flows. Tree box filters are highly adaptable solutions that can be used in all types of development and in all types of soils but are especially applicable to dense urban parking lots, street, and roadways.

Also known as:

- *Catch basin planter box*
- *Bioretention vault*
- *Tree box filter*

Proprietary biotreatment
Source: http://www.americastusa.com /index.php/filterra/

Feasibility Screening Considerations

- Proprietary biotreatment devices that are unlined may cause incidental infiltration. Therefore, an evaluation of site conditions should be conducted to evaluate whether the BMP should include an impermeable liner to avoid infiltration into the subsurface.

Opportunity Criteria

- Drainage areas of 0.25 to 1.0 acres.
- Land use may include commercial, residential, mixed use, institutional, and subdivisions. Proprietary biotreatment facilities may also be applied in parking lot islands, traffic circles, road shoulders, and road medians.
- Must not adversely affect the level of flood protection provided by the drainage system.

OC-Specific Design Criteria and Considerations

☐ Frequent maintenance and the use of screens and grates to keep trash out may decrease the likelihood of clogging and prevent obstruction and bypass of incoming flows.

☐ Consult proprietors for specific criteria concerning the design and performance.

☐ Proprietary biotreatment may include specific media to address pollutants of concern. However, for proprietary device to be considered a biotreatment device the media must be capable of supporting rigorous growth of vegetation.

☐ Proprietary systems must be acceptable to the reviewing agency. Reviewing agencies shall have the discretion to request performance information. Reviewing agencies shall have the discretion to deny the use of a proprietary BMP on the grounds of performance, maintenance considerations, or other relevant factors.

☐ In right of way areas, plant selection should not impair traffic lines of site. Local jurisdictions may also limit plant selection in keeping with landscaping themes.

Computing Sizing Criteria for Proprietary Biotreatment Device

- Proprietary biotreatment devices can be volume based or flow-based BMPs.
- Volume-based proprietary devices should be sized using the Simple Design Capture Volume Sizing Method described in **Appendix III.3.1** or the Capture Efficiency Method for Volume-Based, Constant Drawdown BMPs described in **Appendix III.3.2**.
- The required design flowrate for flow-based proprietary devices should be computed using the Capture Efficiency Method for Flow-based BMPs described in **Appendix III.3.3**).

In South Orange County, the provided ponding plus pore volume must be checked to demonstrate that it is greater than 0.75 of the remaining DCV that this BMP is designed to address. Many propretary biotreatment BMPs will not be able to meet the definition of "biofiltration" that applies in South Orange County. See Section III.7 and Worksheet SOC-1.

MODULAR WETLANDS SYSTEM STORMWATER BIOFILTRATION GUIDE

(SPECIFICATIONS AND SIZING OPTIONS)

Bio Clean

A Forterra Company

Modular Wetlands® System Linear

A Stormwater Biofiltration Solution

OVERVIEW

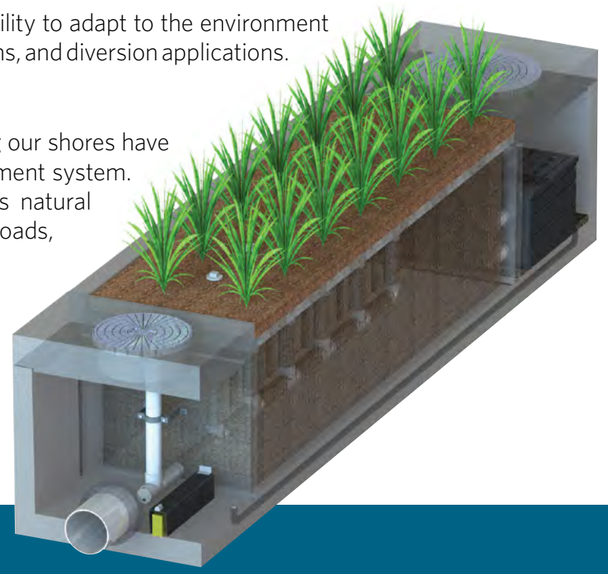
The Bio Clean Modular Wetlands® System Linear (MWS Linear) represents a pioneering breakthrough in stormwater technology as the only biofiltration system to utilize patented horizontal flow, allowing for a smaller footprint, higher treatment capacity, and a wide range of versatility. While most biofilters use little or no pretreatment, the Modular Wetlands System Linear incorporates an advanced pretreatment chamber that includes separation and pre-filter cartridges. In this chamber, sediment and hydrocarbons are removed from runoff before entering the biofiltration chamber, reducing maintenance costs and improving performance.

Horizontal flow also gives the system the unique ability to adapt to the environment through a variety of configurations, bypass orientations, and diversion applications.

The Urban Impact

For hundreds of years, natural wetlands surrounding our shores have played an integral role as nature's stormwater treatment system. But as cities grow and develop, our environment's natural filtration systems are blanketed with impervious roads, rooftops, and parking lots.

Bio Clean understands this loss and has spent years re-establishing nature's presence in urban areas, and rejuvenating waterways with the MWS Linear.



PERFORMANCE

The Modular Wetlands® System Linear continues to outperform other treatment methods with superior pollutant removal for TSS, heavy metals, nutrients, hydrocarbons, and bacteria. Since 2007 the MWS Linear has been field tested on numerous sites across the country and is proven to effectively remove pollutants through a combination of physical, chemical, and biological filtration processes. In fact, the MWS Linear harnesses some of the same biological processes found in natural wetlands in order to collect, transform, and remove even the most harmful pollutants.

66% REMOVAL OF DISSOLVED ZINC	**69%** REMOVAL OF TOTAL ZINC	**38%** REMOVAL OF DISSOLVED COPPER	**64%** REMOVAL OF TOTAL PHOSPHORUS	
45% REMOVAL OF NITROGEN	**50%** REMOVAL OF TOTAL COPPER	**95%** REMOVAL OF MOTOR OIL	**67%** REMOVAL OF ORTHO PHOSPHORUS	**85%** REMOVAL OF TSS

APPROVALS

The Modular Wetlands® System Linear has successfully met years of challenging technical reviews and testing from some of the most prestigious and demanding agencies in the nation and perhaps the world. Here is a list of some of the most high-profile approvals, certifications, and verifications from around the country.

Washington State Department of Ecology TAPE Approved

The MWS Linear is approved for General Use Level Designation (GULD) for Basic, Enhanced, and Phosphorus treatment at 1 gpm/ft^2 loading rate. The highest performing BMP on the market for all main pollutant categories.

California Water Resources Control Board, Full Capture Certification

The Modular Wetlands® System is the first biofiltration system to receive certification as a full capture trash treatment control device.

Virginia Department of Environmental Quality, Assignment

The Virginia Department of Environmental Quality assigned the MWS Linear the highest phosphorus removal rating for manufactured treatment devices to meet the new Virginia Stormwater Management Program (VSMP) regulation technical criteria.

Maryland Department of the Environment, Approved ESD

Granted Environmental Site Design (ESD) status for new construction, redevelopment, and retrofitting when designed in accordance with the design manual.

MASTEP Evaluation

The University of Massachusetts at Amherst – Water Resources Research Center issued a technical evaluation report noting removal rates up to 84% TSS, 70% total phosphorus, 68.5% total zinc, and more.

Rhode Island Department of Environmental Management, Approved BMP

Approved as an authorized BMP and noted to achieve the following minimum removal efficiencies: 85% TSS, 60% pathogens, 30% total phosphorus, and 30% total nitrogen.

Texas Commission on Environmental Quality

Atlanta Regional Commission

ADVANTAGES

- HORIZONTAL FLOW BIOFILTRATION
- GREATER FILTER SURFACE AREA
- PRETREATMENT CHAMBER
- PATENTED PERIMETER VOID AREA
- FLOW CONTROL
- NO DEPRESSED PLANTER AREA
- AUTO DRAINDOWN MEANS NO MOSQUITO VECTOR

OPERATION

The Modular Wetlands® System Linear is the most efficient and versatile biofiltration system on the market, and it is the only system with horizontal flow which:

- Improves performance
- Reduces footprint
- Minimizes maintenance

Figure 1 & Figure 2 illustrate the invaluable benefits of horizontal flow and the multiple treatment stages.

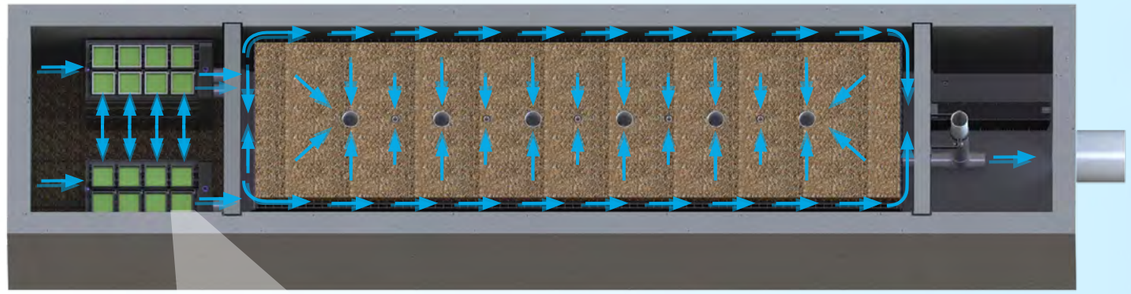


Figure 2,
Top View

2x to 3x more surface area than traditional downward flow bioretention systems.

1 PRETREATMENT

SEPARATION

- Trash, sediment, and debris are separated before entering the pre-filter boxes
- Designed for easy maintenance access

PRE-FILTER BOXES

- Over 25 sq. ft. of surface area per box
- Utilizes BioMediaGREEN™ filter material
- Removes over 80% of TSS and 90% of hydrocarbons
- Prevents pollutants that cause clogging from migrating to the biofiltration chamber

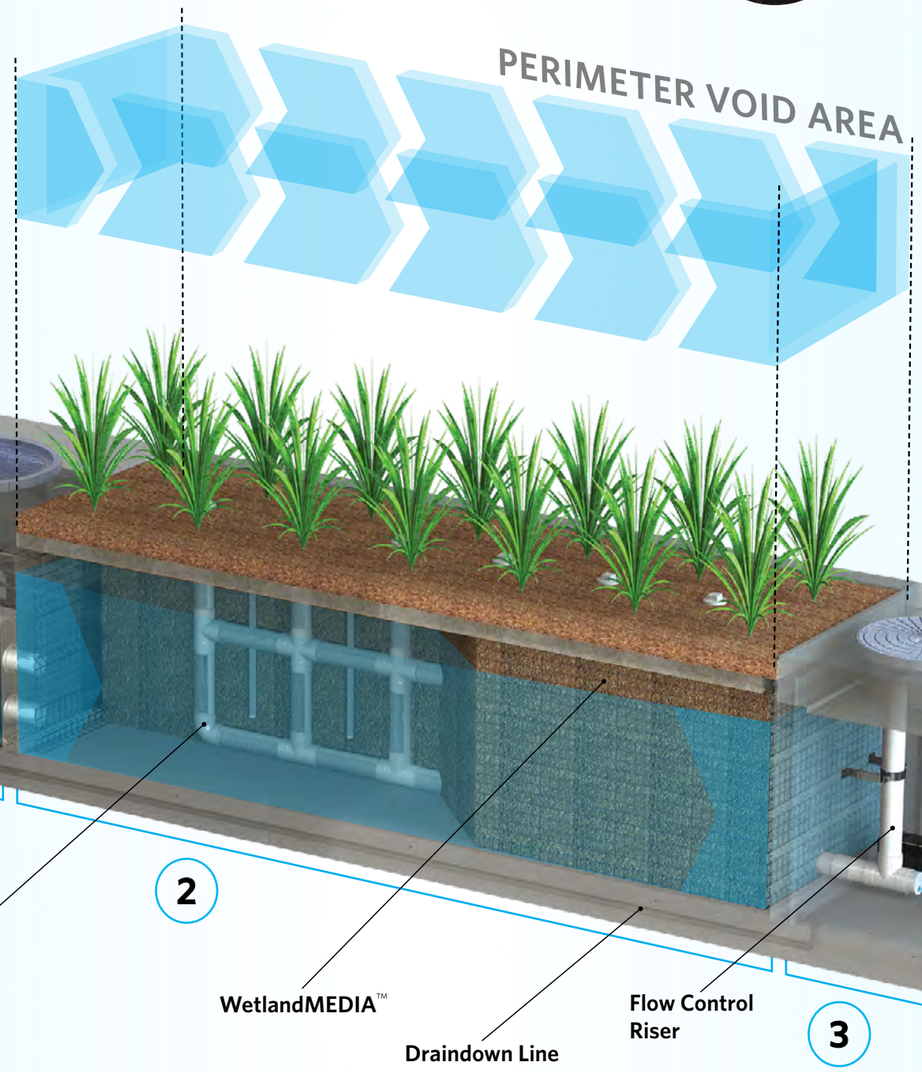

Figure 1

2 BIOFILTRATION

HORIZONTAL FLOW

- Less clogging than downward flow biofilters
- Water flow is subsurface
- Improves biological filtration

PATENTED PERIMETER VOID AREA

- Vertically extends void area between the walls and the WetlandMEDIA™ on all four sides
- Maximizes surface area of the media for higher treatment capacity

WETLANDMEDIA

- Contains no organics and removes phosphorus
- Greater surface area and 48% void space
- Maximum evapotranspiration
- High ion exchange capacity and lightweight

3 DISCHARGE

FLOW CONTROL

- Orifice plate controls flow of water through WetlandMEDIA™ to a level lower than the media's capacity
- Extends the life of the media and improves performance

DRAINDOWN FILTER

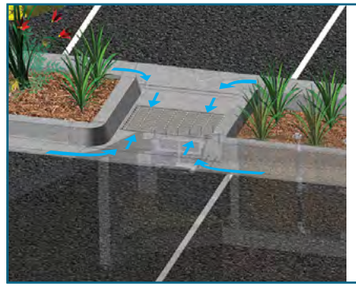
- The draindown is an optional feature that completely drains the pretreatment chamber
- Water that drains from the pretreatment chamber between storm events will be treated

CONFIGURATIONS

The Modular Wetlands® System Linear is the preferred biofiltration system of civil engineers across the country due to its versatile design. This highly versatile system has available "pipe-in" options on most models, along with built-in curb or grated inlets for simple integration into your storm drain design.

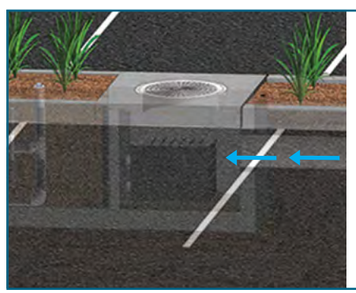
CURB TYPE

The Curb Type configuration accepts sheet flow through a curb opening and is commonly used along roadways and parking lots. It can be used in sump or flow-by conditions. Length of curb opening varies based on model and size.



GRATE TYPE

The Grate Type configuration offers the same features and benefits as the Curb Type but with a grated/drop inlet above the systems pretreatment chamber. It has the added benefit of allowing pedestrian access over the inlet. ADA-compliant grates are available to assure easy and safe access. The Grate Type can also be used in scenarios where runoff needs to be intercepted on both sides of landscape islands.



VAULT TYPE

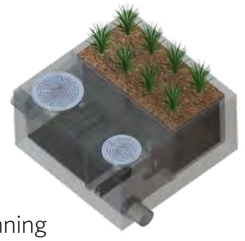
The system's patented horizontal flow biofilter is able to accept inflow pipes directly into the pretreatment chamber, meaning the Modular Wetlands® can be used in end-of-the-line installations. This greatly improves feasibility over typical decentralized designs that are required with other biofiltration/ bioretention systems. Another benefit of the "pipe-in" design is the ability to install the system downstream of underground detention systems to meet water quality volume requirements.

DOWNSPOUT TYPE

The Downspout Type is a variation of the Vault Type and is designed to accept a vertical downspout pipe from rooftop and podium areas. Some models have the option of utilizing an internal bypass, simplifying the overall design. The system can be installed as a raised planter, and the exterior can be stuccoed or covered with other finishes to match the look of adjacent buildings.

ORIENTATIONS

SIDE-BY-SIDE



The Side-By-Side orientation places the pretreatment and discharge chamber adjacent to one another with the biofiltration chamber running parallel on either side. This minimizes the system length, providing a highly compact footprint. It has been proven useful in situations such as streets with directly adjacent sidewalks, as half of the system can be placed under that sidewalk. This orientation also offers internal bypass options as discussed below.

END-TO-END

The End-To-End orientation places the pretreatment and discharge chambers on opposite ends of the biofiltration chamber, therefore minimizing the width of the system to 5 ft. (outside dimension). This orientation is perfect for linear projects and street retrofits where existing utilities and sidewalks limit the amount of space available for installation. One limitation of this orientation is that bypass must be external.

BYPASS

INTERNAL BYPASS WEIR (SIDE-BY-SIDE ONLY)

The Side-By-Side orientation places the pretreatment and discharge chambers adjacent to one another allowing for integration of internal bypass. The wall between these chambers can act as a bypass weir when flows exceed the system's treatment capacity, thus allowing bypass from the pretreatment chamber directly to the discharge chamber.

EXTERNAL DIVERSION WEIR STRUCTURE

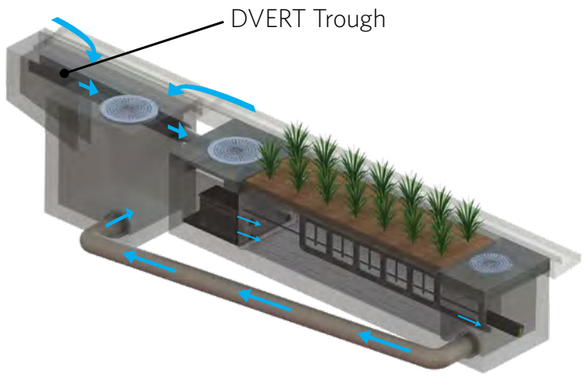
This traditional offline diversion method can be used with the Modular Wetlands® System Linear in scenarios where runoff is being piped to the system. These simple and effective structures are generally configured with two outflow pipes. The first is a smaller pipe on the upstream side of the diversion weir - to divert low flows over to the MWS Linear for treatment. The second is the main pipe that receives water once the system has exceeded treatment capacity and water flows over the weir.

FLOW-BY-DESIGN

This method is one in which the system is placed just upstream of a standard curb or grate inlet to intercept the first flush. Higher flows simply pass by the MWS Linear and into the standard inlet downstream.

DVERT LOW FLOW DIVERSION

This simple yet innovative diversion trough can be installed in existing or new curb and grate inlets to divert the first flush to the Modular Wetlands® System Linear via pipe. It works similar to a rain gutter and is installed just below the opening into the inlet. It captures the low flows and channels



them over to a connecting pipe exiting out the wall of the inlet and leading to the MWS Linear. The DVERT is perfect for retrofit and green street applications that allow the system to be installed anywhere space is available.

SPECIFICATIONS

FLOW-BASED DESIGNS

The Modular Wetlands® System Linear can be used in stand-alone applications to meet treatment flow requirements, and since it is the only biofiltration system that can accept inflow pipes several feet below the surface, it can be used not only in decentralized design applications but also as a large central end-of-the-line application for maximum feasibility.

MODEL #	DIMENSIONS	WETLANDMEDIA SURFACE AREA (sq. ft.)	TREATMENT FLOW RATE (cfs)
MWS-L-4-4	4′ x 4′	23	0.052
MWS-L-4-6	4′ x 6′	32	0.073

VOLUME-BASED DESIGNS

HORIZONTAL FLOW BIOFILTRATION ADVANTAGE

MODULAR WETLANDS® SYSTEM LINEAR WITH URBANPOND™ PRESTORAGE

In the example above, the Modular Wetlands® System Linear is installed downstream of the UrbanPond storage system. The MWS Linear is designed for the water quality volume and will treat and discharge the required volume within local draindown time requirements. The MWS Linear's unique horizontal flow design, gives it benefits no other biofilter has - the ability to be placed downstream of detention ponds, extended dry detention basins, underground storage systems and permeable paver reservoirs. The system's horizontal flow configuration and built-in orifice control allows it to be installed with just 6" of fall between inlet and outlet pipe for a simple connection to projects with shallow downstream tie-in points.

UrbanPond
Single and Double Modules

DESIGN SUPPORT

Bio Clean engineers are trained to provide you with superior support for all volume sizing configurations throughout the country. Our vast knowledge of state and local regulations allow us to quickly and efficiently size a system to maximize feasibility. Volume control and hydromodification regulations are expanding the need to decrease the cost and size of your biofiltration system. Bio Clean will help you realize these cost savings with the MWS Linear, the only biofilter than can be used downstream of storage BMPs.

ADVANTAGES

- LOWER COST THAN FLOW-BASED DESIGN
- MEETS LID REQUIREMENTS
- BUILT-IN ORIFICE CONTROL STRUCTURE
- WORKS WITH DEEP INSTALLATIONS

APPLICATIONS

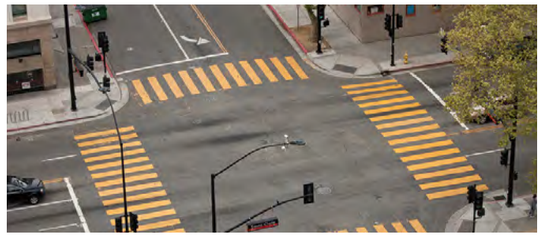
The Modular Wetlands® System Linear has been successfully used on numerous new construction and retrofit projects. The system's superior versatility makes it beneficial for a wide range of stormwater and waste water applications - treating rooftops, streetscapes, parking lots, and industrial sites.

INDUSTRIAL

Many states enforce strict regulations for discharges from industrial sites. The MWS Linear has helped various sites meet difficult EPA-mandated effluent limits for dissolved metals and other pollutants.

RESIDENTIAL

Low to high density developments can benefit from the versatile design of the MWS Linear. The system can be used in both decentralized LID design and cost-effective end-of-the-line configurations.



STREETS

Street applications can be challenging due to limited space. The MWS Linear is very adaptable, and it offers the smallest footprint to work around the constraints of existing utilities on retrofit projects.

PARKING LOTS

Parking lots are designed to maximize space and the Modular Wetlands'® 4 ft. standard planter width allows for easy integration into parking lot islands and other landscape medians.

COMMERCIAL

Compared to bioretention systems, the MWS Linear can treat far more area in less space, meeting treatment and volume control requirements.

MIXED USE

The MWS Linear can be installed as a raised planter to treat runoff from rooftops or patios, making it perfect for sustainable "live-work" spaces.

More applications include:

• Agriculture • Reuse • Low Impact Development • Waste Water

PLANT SELECTION

Abundant plants, trees, and grasses bring value and an aesthetic benefit to any urban setting, but those in the Modular Wetlands® System Linear do even more - they increase pollutant removal. What's not seen, but very important, is that below grade, the stormwater runoff/flow is being subjected to nature's secret weapon: a dynamic physical, chemical, and biological process working to break down and remove non-point source pollutants. The flow rate is controlled in the MWS Linear, giving the plants more contact time so that pollutants are more successfully decomposed, volatilized, and incorporated into the biomass of the Modular Wetlands'® micro/macro flora and fauna.

A wide range of plants are suitable for use in the Modular Wetlands®, but selections vary by location and climate. View suitable plants by visiting biocleanenvironmental.com/plants.

INSTALLATION

The Modular Wetlands® System Linear is simple, easy to install, and has a space-efficient design that offers lower excavation and installation costs compared to traditional tree-box type systems. The structure of the system resembles precast catch basin or utility vaults and is installed in a similar fashion.

The system is delivered fully assembled for quick installation. Generally, the structure can be unloaded and set in place in 15 minutes. Our experienced team of field technicians is available to supervise installations and provide technical support.

MAINTENANCE

Reduce your maintenance costs, man hours, and materials with the Modular Wetlands® System Linear. Unlike other biofiltration systems that provide no pretreatment, the MWS Linear is a self-contained treatment train which incorporates simple and effective pretreatment.

Maintenance requirements for the biofilter itself are almost completely eliminated, as the pretreatment chamber removes and isolates trash, sediments, and hydrocarbons. What's left is the simple maintenance of an easily accessible pretreatment chamber that can be cleaned by hand or with a standard vac truck. Only periodic replacement of low-cost media in the pre-filter boxes is required for long-term operation, and there is absolutely no need to replace expensive biofiltration media.

INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURERS SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURERS CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE TO VERIFY PROJECT ENGINEERS RECOMMENDED BASE SPECIFICATIONS.
4. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE. (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL PIPES SHALL BE SEALED WATER TIGHT PER MANUFACTURERS STANDARD CONNECTION DETAIL.
5. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO GROUT ALL MANHOLES AND HATCHES TO MATCH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.
6. VEGETATION SUPPLIED AND INSTALLED BY OTHERS. ALL UNITS WITH VEGETATION MUST HAVE DRIP OR SPRAY IRRIGATION SUPPLIED AND INSTALLED BY OTHERS.
7. CONTRACTOR RESPONSIBLE FOR CONTACTING BIO CLEAN FOR ACTIVATION OF UNIT. MANUFACTURERS WARRANTY IS VOID WITH OUT PROPER ACTIVATION BY A BIO CLEAN REPRESENTATIVE.

GENERAL NOTES

1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT BIO CLEAN.

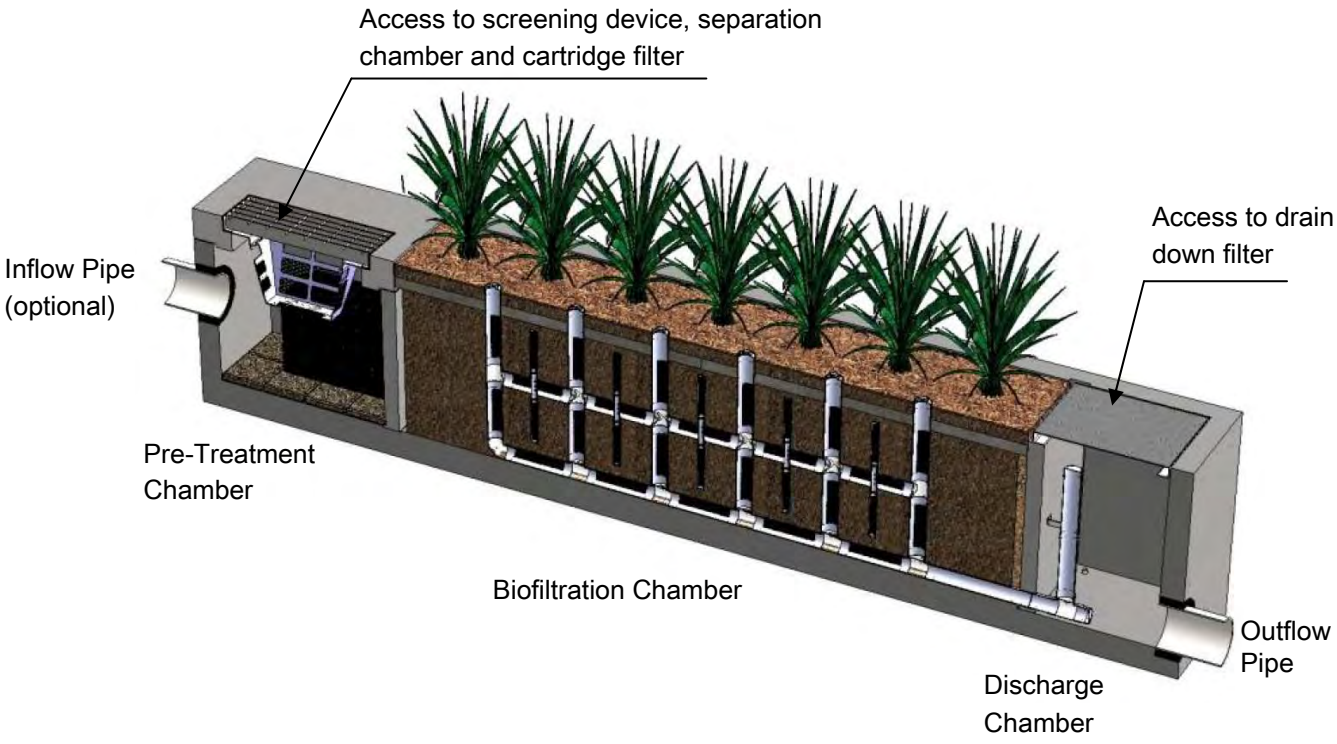
MAINTENANCE GUIDELINES FOR MODULAR WETLANDS SYSTEM

Maintenance Guidelines for Modular Wetland System - Linear

Maintenance Summary

- Remove Trash from Screening Device – average maintenance interval is 6 to 12 months.
  - (*5 minute average service time*).
- Remove Sediment from Separation Chamber – average maintenance interval is 12 to 24 months.
  - (*10 minute average service time*).
- Replace Cartridge Filter Media – average maintenance interval 12 to 24 months.
  - (*10-15 minute per cartridge average service time*).
- Replace Drain Down Filter Media – average maintenance interval is 12 to 24 months.
  - (*5 minute average service time*).
- Trim Vegetation – average maintenance interval is 6 to 12 months.
  - (*Service time varies*).

System Diagram



Maintenance Procedures

Screening Device

1. Remove grate or manhole cover to gain access to the screening device in the Pre-Treatment Chamber. Vault type units do not have screening device. Maintenance can be performed without entry.
2. Remove all pollutants collected by the screening device. Removal can be done manually or with the use of a vacuum truck. The hose of the vacuum truck will not damage the screening device.
3. Screening device can easily be removed from the Pre-Treatment Chamber to gain access to separation chamber and media filters below. Replace grate or manhole cover when completed.

Separation Chamber

1. Perform maintenance procedures of screening device listed above before maintaining the separation chamber.
2. With a pressure washer spray down pollutants accumulated on walls and cartridge filters.
3. Vacuum out Separation Chamber and remove all accumulated pollutants. Replace screening device, grate or manhole cover when completed.

Cartridge Filters

1. Perform maintenance procedures on screening device and separation chamber before maintaining cartridge filters.
2. Enter separation chamber.
3. Unscrew the two bolts holding the lid on each cartridge filter and remove lid.
4. Remove each of 4 to 8 media cages holding the media in place.
5. Spray down the cartridge filter to remove any accumulated pollutants.
6. Vacuum out old media and accumulated pollutants.
7. Reinstall media cages and fill with new media from manufacturer or outside supplier. Manufacturer will provide specification of media and sources to purchase.
8. Replace the lid and tighten down bolts. Replace screening device, grate or manhole cover when completed.

Drain Down Filter

1. Remove hatch or manhole cover over discharge chamber and enter chamber.
2. Unlock and lift drain down filter housing and remove old media block. Replace with new media block. Lower drain down filter housing and lock into place.
3. Exit chamber and replace hatch or manhole cover.

Maintenance Notes

1. Following maintenance and/or inspection, it is recommended the maintenance operator prepare a maintenance/inspection record. The record should include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanisms.

2. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time.

3. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.

4. Entry into chambers may require confined space training based on state and local regulations.

5. No fertilizer shall be used in the Biofiltration Chamber.

6. Irrigation should be provided as recommended by manufacturer and/or landscape architect. Amount of irrigation required is dependent on plant species. Some plants may require irrigation.

Maintenance Procedure Illustration

Screening Device

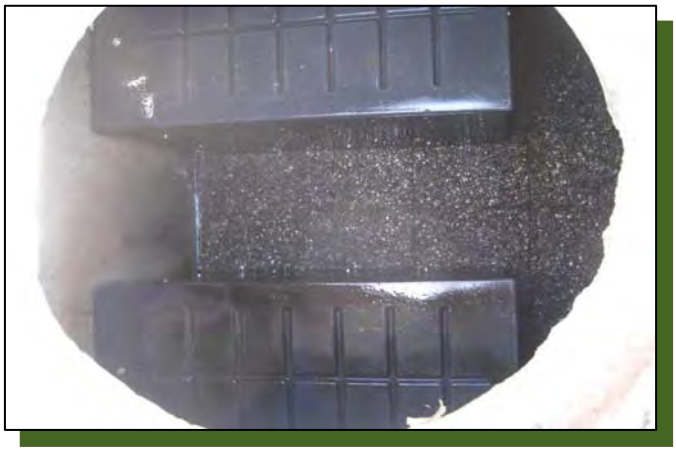
The screening device is located directly under the manhole or grate over the Pre-Treatment Chamber. It's mounted directly underneath for easy access and cleaning. Device can be cleaned by hand or with a vacuum truck.

Separation Chamber

The separation chamber is located directly beneath the screening device. It can be quickly cleaned using a vacuum truck or by hand. A pressure washer is useful to assist in the cleaning process.

Cartridge Filters

The cartridge filters are located in the Pre-Treatment chamber connected to the wall adjacent to the biofiltration chamber. The cartridges have removable tops to access the individual media filters. Once the cartridge is open media can be easily removed and replaced by hand or a vacuum truck.



Drain Down Filter

The drain down filter is located in the Discharge Chamber. The drain filter unlocks from the wall mount and hinges up. Remove filter block and replace with new block.

Trim Vegetation

Vegetation should be maintained in the same manner as surrounding vegetation and trimmed as needed. No fertilizer shall be used on the plants. Irrigation per the recommendation of the manufacturer and or landscape architect. Different types of vegetation requires different amounts of irrigation.

Inspection Checklist

Modular Wetland System Type (Curb, Grate or UG Vault): _____ Size (22', 14' or etc.): _____

Structural Integrity:	**Yes**	**No**	**Comments**
Damage to pre-treatment access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Damage to discharge chamber access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Does the MWS unit show signs of structural deterioration (cracks in the wall, damage to frame)?			
Is the inlet/outlet pipe or drain down pipe damaged or otherwise not functioning properly?			
Working Condition:			
Is there evidence of illicit discharge or excessive oil, grease, or other automobile fluids entering and clogging the unit?			
Is there standing water in inappropriate areas after a dry period?			
Is the filter insert (if applicable) at capacity and/or is there an accumulation of debris/trash on the shelf system?			
Does the depth of sediment/trash/debris suggest a blockage of the inflow pipe, bypass or cartridge filter? If yes, specify which one in the comments section. Note depth of accumulation in in pre-treatment chamber.			Depth:
Does the cartridge filter media need replacement in pre-treatment chamber and/or discharge chamber?			Chamber:
Any signs of improper functioning in the discharge chamber? Note issues in comments section.			
Other Inspection Items:			
Is there an accumulation of sediment/trash/debris in the wetland media (if applicable)?			
Is it evident that the plants are alive and healthy (if applicable)? Please note Plant Information below.			
Is there a septic or foul odor coming from inside the system?			

Waste:	**Yes**	**No**
Sediment / Silt / Clay		
Trash / Bags / Bottles		
Green Waste / Leaves / Foliage		

Recommended Maintenance	
No Cleaning Needed	
Schedule Maintenance as Planned	
Needs Immediate Maintenance	

Plant Information	
Damage to Plants

STATE WATER RESOURCES CONTROL BOARD'S CERTIFIED FULL CAPTURE SYSTEM LIST OF TRASH TREATMENT CONTROL DEVICES (UPDATED MAY 2021)

CERTIFIED FULL CAPTURE SYSTEM LIST OF TRASH TREATMENT CONTROL DEVICES (Updated May 2021)

Trash Provisions

In accordance with the Trash Provisions[1], all trash treatment control devices (Devices) installed after December 2, 2015 shall meet the Full Capture System definition[2] and be certified by the State Water Resources Control Board (State Water Board) Executive Director, or designee, prior to installation. The Devices included on this list are either: 1) new Devices certified by the State Water Board, or 2) grandfathered Devices from a list maintained by the San Francisco Regional Water Board prior to the adoption of the Trash Amendments. All new Device installations shall be designed according to the following criteria:

1. Appropriately sized to treat not less than the peak flowrate resulting from a 1-year, 1-hour storm event (design storm) or at least the same peak flows from the corresponding storm drain;
2. Do not bypass trash below the design storm under maximum operational loading conditions; and
3. Trap all particles that are 5 mm or greater up to the design flow[3] or at least the same peak flows from the corresponding storm drain; and do not have a

[1] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries of California adopted by the State Water Board.

[2] A Full Capture System is a treatment control, or series of treatment controls, including but not limited to, a multi-benefit project or a low-impact development control that traps all particles that are 5 mm or greater, and has a design treatment capacity that is either: of not less than the peak flow rate, Q, resulting from a one-year, one-hour storm in the subdrainage area, or b) appropriately sized to, and designed to carry at least the same flows as, the corresponding storm drain.

[3] The region specific one-year, one-hour storm (or design flow) may be obtained from the National Oceanic and Atmospheric Precipitation Estimates. https://www.weather.gov/media/owp/oh/hdsc/docs/Atlas14_Volume6.pdf

diversion structure present upstream such that a portion of the peak flow is not treated to trap all particles 5 mm or greater.

Vector Control Accessibility

According to the California Health and Safety Code[4], Landowners in California are legally responsible to abate (eliminate the source of) a public nuisance arising from their property, including mosquitoes. Mosquito vector control districts have substantial authority to access public and private property, inspect known or suspected sources of mosquitoes, abate mosquito sources, and charge the landowner for work performed and/or charge fees if a landowner is unwilling or unable to address a mosquito source arising from their property.

Depending on the its design, certain Devices may impede the mosquito vector control district's ability to (1) visually inspect the Device and/or storm vault for mosquito breeding, and (2) apply the appropriate chemical treatment. Moreover, some devices may create a habitat for mosquitoes. Prior to installation of any certified Device, the local mosquito vector control district should be contacted to ensure the installation conforms to the District's visual inspection, treatment, and vector breeding minimizing guidelines. The Mosquito Vector Control Association of California Review Team may also be contacted via email at: (Trashtreatment@mvcac.org).

New Device Certification or Fact Sheet Update

To apply for certification of a new Device, or to update a grandfathered Device fact sheet, the Device owner shall submit an application/fact sheet in accordance with the *Trash Treatment Control Device Certification and Fact Sheet Update Requirements.* Upon determining that a Device application is complete and meets the definition of a trash full capture system and is approved by the Mosquito Vector Control Association of California, the Executive Director Designee will place the Device on the State Water Board's *Certified Full Capture System List of Trash Treatment Control Devices*. This list will also identify updates to grandfathered Device fact sheets that satisfy the requirements.

The *Trash Treatment Control Device Certification and Fact Sheet Update Requirements* is found on the Trash Implementation Program webpage (https://www.waterboards.ca.gov/water_issues/programs/stormwater/trash_implementation.html).

Listing of any Device does not constitute an endorsement by the State Water Board. The Executive Director reserves the right to de-certify and remove any Device from this list that does not satisfy the requirements of the Trash Provisions, such as but not limited to when a Device is discontinued or is not approved by Mosquito Vector Control Association of California Review Team.

- Responsible Pest Control
- Sewage Spill Reference Guide
- Tips for Landscape & Gardening
- Tips for Pool Maintenance
- Tips for Projects Using Paint
- Proper Maintenance Practices for Your Business

The Ocean Begins at Your Front Door

Follow these simple steps to help reduce water pollution:

Household Activities

- Do not rinse spills with water. Use dry cleanup methods such as applying cat litter or another absorbent material, sweep and dispose of in the trash. Take items such as used or excess batteries, oven cleaners, automotive fluids, painting products and cathode ray tubes, like TVs and computer monitors, to a Household Hazardous Waste Collection Center (HHWCC).
- For a HHWCC near you call (714) 834-6752 or visit www.oclandfills.com.
- Do not hose down your driveway, sidewalk or patio to the street, gutter or storm drain. Sweep up debris and dispose of it in the trash.

Automotive

- Take your vehicle to a commercial car wash whenever possible. If you wash your vehicle at home, choose soaps, cleaners, or detergents labeled non-toxic, phosphate- free or biodegradable. Vegetable and citrus-based products are typically safest for the environment.
- Do not allow washwater from vehicle washing to drain into the street, gutter or storm drain. Excess washwater should be disposed of in the sanitary sewer (through a sink or toilet) or onto an absorbent surface like your lawn.
- Monitor your vehicles for leaks and place a pan under leaks. Keep your vehicles well maintained to stop and prevent leaks.
- Never pour oil or antifreeze in the street, gutter or storm drain. Recycle these substances at a service station, a waste oil collection center or used oil recycling center. For the nearest Used Oil Collection Center call 1-800-CLEANUP or visit www.1800cleanup.org.

Pool Maintenance

- Pool and spa water must be dechlorinated and free of excess acid, alkali or color to be allowed in the street, gutter or storm drain.
- When it is not raining, drain dechlorinated pool and spa water directly into the sanitary sewer.
- Some cities may have ordinances that do not allow pool water to be disposed of in the storm drain. Check with your city.

Landscape and Gardening

- Do not over-water. Water your lawn and garden by hand to control the amount of water you use or set irrigation systems to reflect seasonal water needs. If water flows off your yard onto your driveway or sidewalk, your system is over-watering. Periodically inspect and fix leaks and misdirected sprinklers.
- Do not rake or blow leaves, clippings or pruning waste into the street, gutter or storm drain. Instead, dispose of waste by composting, hauling it to a permitted landfill, or as green waste through your city's recycling program.
- Follow directions on pesticides and fertilizer, (measure, do not estimate amounts) and do not use if rain is predicted within 48 hours.
- Take unwanted pesticides to a HHWCC to be recycled. For locations and hours of HHWCC, call (714) 834-6752 or visit www.oclandfills.com.

Trash

- Place trash and litter that cannot be recycled in securely covered trash cans.
- Whenever possible, buy recycled products.
- Remember: Reduce, Reuse, Recycle.

Pet Care

- Always pick up after your pet. Flush waste down the toilet or dispose of it in the trash. Pet waste, if left outdoors, can wash into the street, gutter or storm drain.
- If possible, bathe your pets indoors. If you must bathe your pet outside, wash it on your lawn or another absorbent/permeable surface to keep the washwater from entering the street, gutter or storm drain.
- Follow directions for use of pet care products and dispose of any unused products at a HHWCC.

Common Pollutants

Home Maintenance

- Detergents, cleaners and solvents
- Oil and latex paint
- Swimming pool chemicals
- Outdoor trash and litter

Lawn and Garden

- Pet and animal waste
- Pesticides
- Clippings, leaves and soil
- Fertilizer

Automobile

- Oil and grease
- Radiator fluids and antifreeze
- Cleaning chemicals
- Brake pad dust

The Ocean Begins at Your Front Door

Never allow pollutants to enter the street, gutter or storm drain!

Did You Know?

- Most people believe that the largest source of water pollution in urban areas comes from specific sources such as factories and sewage treatment plants. In fact, the largest source of water pollution comes from city streets, neighborhoods, construction sites and parking lots. This type of pollution is sometimes called “non-point source” pollution.
- There are two types of non-point source pollution: stormwater and urban runoff pollution.
- Stormwater runoff results from rainfall. When rainstorms cause large volumes of water to rinse the urban landscape, picking up pollutants along the way.
- Urban runoff can happen any time of the year when excessive water use from irrigation, vehicle washing and other sources carries trash, lawn clippings and other urban pollutants into storm drains.

Where Does It Go?

- Anything we use outside homes, vehicles and businesses – like motor oil, paint, pesticides, fertilizers and cleaners – can be blown or washed into storm drains.
- A little water from a garden hose or rain can also send materials into storm drains.
- Storm drains are separate from our sanitary sewer systems; unlike water in sanitary sewers (from sinks or toilets), water in storm drains is not treated before entering our waterways.

Sources of Non-Point Source Pollution

- Automotive leaks and spills.
- Improper disposal of used oil and other engine fluids.
- Metals found in vehicle exhaust, weathered paint, rust, metal plating and tires.
- Pesticides and fertilizers from lawns, gardens and farms.
- Improper disposal of cleaners, paint and paint removers.
- Soil erosion and dust debris from landscape and construction activities.
- Litter, lawn clippings, animal waste, and other organic matter.
- Oil stains on parking lots and paved surfaces.

The Effect on the Ocean

Non-point source pollution can have a serious impact on water quality in Orange County. Pollutants from the storm drain system can harm marine life as well as coastal and wetland habitats. They can also degrade recreation areas such as beaches, harbors and bays.

Stormwater quality management programs have been developed throughout Orange County to educate and encourage the public to protect water quality, monitor runoff in the storm drain system, investigate illegal dumping and maintain storm drains.

Support from Orange County residents and businesses is needed to improve water quality and reduce urban runoff pollution. Proper use and disposal of materials will help stop pollution before it reaches the storm drain and the ocean.

Printed on Recycled Paper

Clean beaches and healthy creeks, rivers, bays and ocean are important to Orange County. However, many common activities such as pest control can lead to water pollution if you're not careful. Pesticide treatments must be planned and applied properly to ensure that pesticides do not enter the street, gutter or storm drain. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering our waterways.

You would never dump pesticides into the ocean, so don't let it enter the storm drains. Pesticides can cause significant damage to our environment if used improperly. If you are thinking of using a pesticide to control a pest, there are some important things to consider.

For more information,
please call
University of California Cooperative
Extension Master Gardeners at
(714) 708-1646
or visit these Web sites:
www.uccemg.org

Help Prevent Ocean Pollution:

Responsible Pest Control

Tips for Pest Control

Key Steps to Follow:

Step 1: Correctly identify the pest (insect, weed, rodent, or disease) and verify that it is actually causing the problem.

Three life stages of the common lady beetle, a beneficial insect.

This is important because beneficial insects are often mistaken for pests and sprayed with pesticides needlessly.

Consult with a Certified Nursery Professional at a local nursery or garden center or send a sample of the pest to the Orange County Agricultural Commissioner's Office.

Determine if the pest is still present – even though you see damage, the pest may have left.

Step 2: Determine how many pests are present and causing damage.

Small pest populations may be controlled more safely using non-pesticide techniques. These include removing food sources, washing off leaves with a strong stream of water, blocking entry into the home using caulking and replacing problem plants with ones less susceptible to pests.

Integrated Pest Management (IPM) usually combines several least toxic pest control methods for long-term prevention and management of pest problems without harming you, your family, or the environment.

UC CE University of California Cooperative Extension

Step 3: If a pesticide must be used, choose the least toxic chemical.

Obtain information on the least toxic pesticides that are effective at controlling the target pest from the UC Statewide Integrated Pest Management (IPM) Program's Web site at www.ipm.ucdavis.edu.

Seek out the assistance of a Certified Nursery Professional at a local nursery or garden center when selecting a pesticide. Purchase the smallest amount of pesticide available.

Apply the pesticide to the pest during its most vulnerable life stage. This information can be found on the pesticide label.

Step 4: Wear appropriate protective clothing.

Follow pesticide labels regarding specific types of protective equipment you should wear. Protective clothing should always be washed separately from other clothing.

Step 5: Continuously monitor external conditions when applying pesticides such as weather, irrigation, and the presence of children and animals.

Never apply pesticides when rain is predicted within the next 48 hours. Also, do not water after applying pesticides unless the directions say it is necessary.

Apply pesticides when the air is still; breezy conditions may cause the spray or dust to drift away from your targeted area.

In case of an emergency call 911 and/or the regional poison control number at (714) 634-5988 or (800) 544-4404 (CA only).

For general questions you may also visit www.calpoison.org.

Step 6: In the event of accidental spills, sweep up or use an absorbent agent to remove any excess pesticides. Avoid the use of water.

Be prepared. Have a broom, dust pan, or dry absorbent material, such as cat litter, newspapers or paper towels, ready to assist in cleaning up spills.

Contain and clean up the spill right away. Place contaminated materials in a doubled plastic bag. All materials used to clean up the spill should be properly disposed of according to your local Household Hazardous Waste Disposal site.

Step 7: Properly store and dispose of unused pesticides.

Purchase Ready-To-Use (RTU) products to avoid storing large concentrated quantities of pesticides.

Store unused chemicals in a locked cabinet.

Unused pesticide chemicals may be disposed of at a Household Hazardous Waste Collection Center.

Empty pesticide containers should be triple rinsed prior to disposing of them in the trash.

Household Hazardous Waste Collection Center

Clean beaches and healthy creeks, rivers, bays and ocean are important to Orange County. However, many common activities can lead to water pollution if you're not careful. Fertilizers, pesticides and other chemicals that are left on yards or driveways can be blown or washed into storm drains that flow to the ocean. Overwatering lawns can also send materials into storm drains. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering our waterways.

You would never pour gardening products into the ocean, so don't let them enter the storm drains. Follow these easy tips to help prevent water pollution.

For more information,
please call the
Orange County Stormwater Program
at **1-877-89-SPILL** (1-877-897-7455)
or visit
www.ocwatersheds.com

UCCE Master Gardener Hotline:
(714) 708-1646

To report a spill,
call the
Orange County 24-Hour
Water Pollution Problem
Reporting Hotline
1-877-89-SPILL (1-877-897-7455).

For emergencies, dial 911.

The tips contained in this brochure provide useful information to help prevent water pollution while landscaping or gardening. If you have other suggestions, please contact your city's stormwater representatives or call the Orange County Stormwater Program.

Help Prevent Ocean Pollution:

Tips for Landscape & Gardening

The Ocean Begins at Your Front Door

PROJECT Pollution PREVENTION

Tips for Landscape & Gardening

Never allow gardening products or polluted water to enter the street, gutter or storm drain.

General Landscaping Tips

- Protect stockpiles and materials from wind and rain by storing them under tarps or secured plastic sheeting.
- Prevent erosion of slopes by planting fast-growing, dense ground covering plants. These will shield and bind the soil.
- Plant native vegetation to reduce the amount of water, fertilizers, and pesticide applied to the landscape.

- Never apply pesticides or fertilizers when rain is predicted within the next 48 hours.

Garden & Lawn Maintenance

- Do not overwater. Use irrigation practices such as drip irrigation, soaker hoses or micro spray systems. Periodically inspect and fix leaks and misdirected sprinklers.
- Do not rake or blow leaves, clippings or pruning waste into the street, gutter or storm drain. Instead, dispose of green waste by composting, hauling it to a permitted landfill, or recycling it through your city's program.

- Use slow-release fertilizers to minimize leaching, and use organic fertilizers.
- Read labels and use only as directed. Do not over-apply pesticides or fertilizers. Apply to spots as needed, rather than blanketing an entire area.
- Store pesticides, fertilizers and other chemicals in a dry covered area to prevent exposure that may result in the deterioration of containers and packaging.

- Rinse empty pesticide containers and re-use rinse water as you would use the product. Do not dump rinse water down storm drains. Dispose of empty containers in the trash.
- When available, use non-toxic alternatives to traditional pesticides, and use pesticides specifically designed to control the pest you are targeting. For more information, visit **www.ipm.ucdavis.edu**.
- If fertilizer is spilled, sweep up the spill before irrigating. If the spill is liquid, apply an absorbent material such as cat litter, and then sweep it up and dispose of it in the trash.
- Take unwanted pesticides to a Household Hazardous Waste Collection Center to be recycled. Locations are provided below.

Household Hazardous Waste Collection Centers

Anaheim:	1071 N. Blue Gum St.
Huntington Beach:	17121 Nichols St.
Irvine:	6411 Oak Canyon
San Juan Capistrano:	32250 La Pata Ave.

For more information, call (714) 834-6752 or visit www.oclandfills.com

Clean beaches and healthy creeks, rivers, bays, and ocean are important to Orange County. However, many common activities can lead to water pollution if you're not careful. Swimming pools and spas are common in Orange County, but they must be maintained properly to guarantee that chemicals aren't allowed to enter the street, where they can flow into the storm drains and then into the waterways. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering our waterways.

You would never dump pool chemicals into the ocean, so don't let it enter the storm drains. Follow these easy tips to help prevent water pollution.

For more information,
please call the
Orange County Stormwater Program
at **1-877-89-SPILL** (1-877-897-7455)
or visit
www.ocwatersheds.com

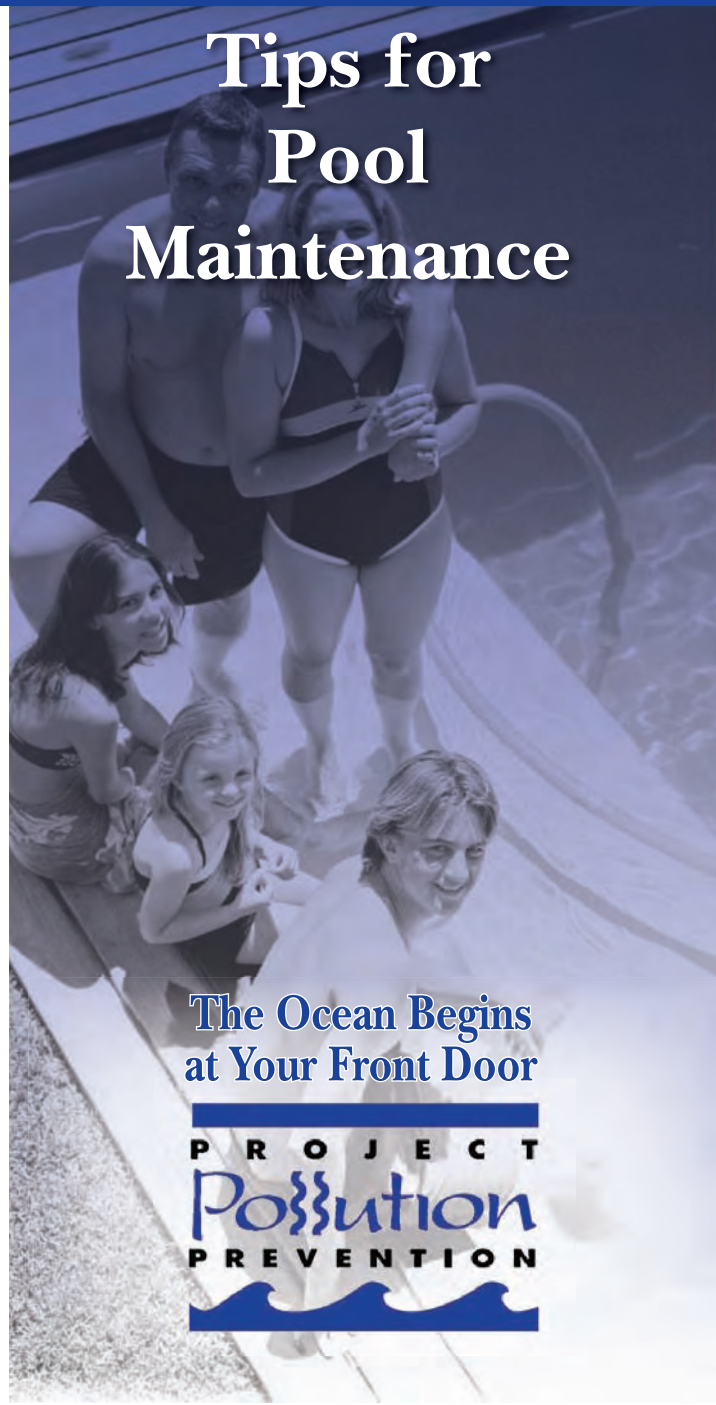
To report a spill,
call the
Orange County 24-Hour
Water Pollution Reporting Hotline
1-877-89-SPILL (1-877-897-7455).

For emergencies, dial 911.

The tips contained in this brochure provide useful information to help prevent water pollution while maintaining your pool. If you have other suggestions, please contact your city's stormwater representatives or call the Orange County Stormwater Program.

Help Prevent Ocean Pollution:

Tips for Pool Maintenance



The Ocean Begins at Your Front Door

PROJECT Pollution PREVENTION

Tips for Pool Maintenance

Many pools are plumbed to allow the pool to drain directly to the sanitary sewer. If yours is not, follow these instructions for disposing of pool and spa water.

Acceptable and Preferred Method of Disposal

When you cannot dispose of pool water in the sanitary sewer, the release of dechlorinated swimming pool water is allowed if all of these tips are followed:

- The residual chlorine does not exceed 0.1 mg/l (parts per million).
- The pH is between 6.5 and 8.5.
- The water is free of any unusual coloration, dirt or algae.
- There is no discharge of filter media.
- There is no discharge of acid cleaning wastes.
- Some cities may have ordinances that do not allow pool water to be disposed into a storm drain. Check with your city.

How to Know if You're Following the Standards

You can find out how much chlorine is in your water by using a pool testing kit. Excess chlorine can be removed by discontinuing the use of chlorine for a few days prior to discharge or by purchasing dechlorinating chemicals from a local pool supply company. Always make sure to follow the instructions that come with any products you use.

Doing Your Part

By complying with these guidelines, you will make a significant contribution toward keeping pollutants out of Orange County's creeks, streams, rivers, bays and the ocean. This helps to protect organisms that are sensitive to pool chemicals, and helps to maintain the health of our environment.

PROJECT Pollution PREVENTION

Clean beaches and healthy creeks, rivers, bays and ocean are important to Orange County. However, many common activities such as painting can lead to water pollution if you're not careful. Paint must be used, stored and disposed of properly to ensure that it does not enter the street, gutter or storm drain. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering our waterways.

You would never dump paint into the ocean, so don't let it enter the storm drains. Follow these easy tips to help prevent water pollution.

For more information,

Help Prevent Ocean Pollution:

Tips for Projects Using Paint

Tips for Projects Using Paint

Paint can cause significant damage to our environment. Whether you hire a contractor or do it yourself, it is important to follow these simple tips when purchasing, using, cleaning, storing and disposing of paint.

Purchasing Paint

- Measure the room or object to be painted, then buy only the amount needed.
- Whenever possible, use water-based paint since it usually does not require hazardous solvents such as paint thinner for cleanup.

Painting

- Use only one brush or roller per color of paint to reduce the amount of water needed for cleaning.
- Place open paint containers or trays on a stable surface and in a position that is unlikely to spill.
- Always use a tarp under the area or object being painted to collect paint drips and contain spills.

Cleaning

- Never clean brushes or rinse paint containers in the street, gutter or storm drain.
- For oil-based products, use as much of the paint on the brushes as possible. Clean brushes with thinner. To reuse thinner, pour it through a fine filter (e.g. nylon, metal gauze or filter paper) to remove solids such as leftover traces of paint.
- For water-based products, use as much of the paint on the brushes as possible, then rinse in the sink.
- Collect all paint chips and dust. Chips and dust from marine paints or paints containing lead, mercury or tributyl tin are hazardous waste. Sweep up and dispose of at a Household Hazardous Waste Collection Center (HHWCC).

Storing Paint

- Store paint in a dry location away from the elements.
- Store leftover water-based paint, oil-based paint and solvents separately in original or clearly marked containers.
- Avoid storing paint cans directly on cement floors. The bottom of the can will rust much faster on cement.
- Place the lid on firmly and store the paint can upside-down to prevent air from entering. This will keep the paint usable longer. Oil-based paint is usable for up to 15 years. Water-based paint remains usable for up to 10 years.

Alternatives to Disposal

- Use excess paint to apply another coat, for touch-ups, or to paint a closet, garage, basement or attic.
- Give extra paint to friends or family. Extra paint can also be donated to a local theatre group, low-income housing program or school.
- Take extra paint to an exchange program such as the **"Stop & Swap"** that allows you to drop off or pick up partially used home care products free of charge. **"Stop & Swap"** programs are available at most HHWCCs.
- For HHWCC locations and hours, call **(714) 834-6752** or visit **www.oclandfills.com**.

Disposing of Paint

- Never put wet paint in the trash.

For water-based paint:

- If possible, brush the leftover paint on cardboard or newspaper. Otherwise, allow the paint to dry in the can with the lid off in a well-ventilated area protected from the elements, children and pets. Stirring the paint every few days will speed up the drying.
- Large quantities of extra paint should be taken to a HHWCC.
- Once dried, paint and painted surfaces may be disposed of in the trash. When setting a dried paint can out for trash collection, leave the lid off so the collector will see that the paint has dried.

For oil-based paint:

- Oil-based paint is a household hazardous waste. All leftover paint should be taken to a HHWCC.

Aerosol paint:

- Dispose of aerosol paint cans at a HHWCC.

Spills

- Never hose down pavement or other impermeable surfaces where paint has spilled.
- Clean up spills immediately by using an absorbent material such as cat litter. Cat litter used to clean water-based paint spills can be disposed of in the trash. When cleaning oil-based paint spills with cat litter, it must be taken to a HHWCC.
- Immediately report spills that have entered the street, gutter or storm drain to the County's 24-Hour Water Pollution Problem Reporting Hotline at **(714) 567-6363** or visit **www.ocwatersheds.com** to fill out an incident reporting form.

PROJECT Pollution PREVENTION

Preventing water pollution at your commercial/industrial site

Clean beaches and healthy creeks, rivers, bays and ocean are important to Orange County. However, many landscape and building maintenance activities can lead to water pollution if you're not careful. Paint, chemicals, plant clippings and other materials can be blown or washed into storm drains that flow to the ocean. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering our waterways.

You would never pour soap or fertilizers into the ocean, so why would you let them enter the storm drains? Follow these easy tips to help prevent water pollution.

Some types of industrial facilities are required to obtain coverage under the State General Industrial Permit. For more information visit: **www.swrcb.ca.gov/stormwater/industrial.html**

For more information, please call the **Orange County Stormwater Program** at **1-877-89-SPILL** (1-877-897-7455) or visit **www.ocwatersheds.com**

To report a spill, call the **Orange County 24-Hour Water Pollution Problem Reporting Hotline** at **1-877-89-SPILL** (1-877-897-7455).

For emergencies, dial 911.

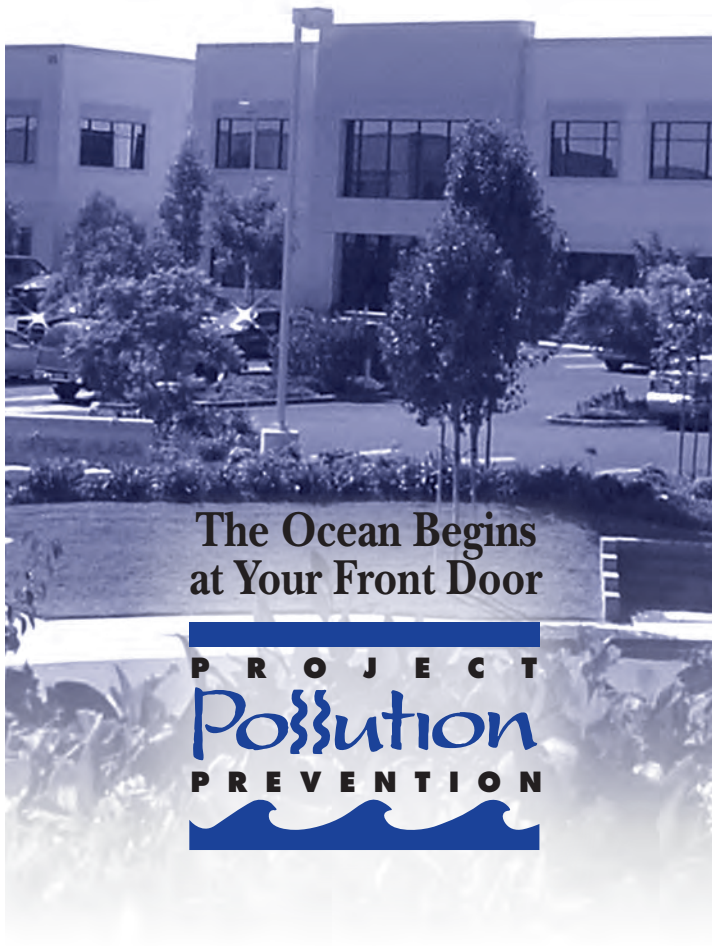
Help Prevent Ocean Pollution:

Proper Maintenance Practices for Your Business



The Ocean Begins at Your Front Door

PROJECT Pollution PREVENTION

Proper Maintenance Practices for your Business

Landscape Maintenance

- Compost grass clippings, leaves, sticks and other vegetation, or dispose of it at a permitted landfill or in green waste containers. Do not dispose of these materials in the street, gutter or storm drain.
- Irrigate slowly and inspect the system for leaks, overspraying and runoff. Adjust automatic timers to avoid overwatering.
- Follow label directions for the use and disposal of fertilizers and pesticides.
- Do not apply pesticides or fertilizers if rain is expected within 48 hours or if wind speeds are above 5 mph.
- Do not spray pesticides within 100 feet of waterways.
- Fertilizers should be worked into the soil rather than dumped onto the surface.
- If fertilizer is spilled on the pavement or sidewalk, sweep it up immediately and place it back in the container.

Building Maintenance

- Never allow washwater, sweepings or sediment to enter the storm drain.
- Sweep up dry spills and use cat litter, towels or similar materials to absorb wet spills. Dispose of it in the trash.
- If you wash your building, sidewalk or parking lot, you **must** contain the water. Use a shop vac to collect the water and contact your city or sanitation agency for proper disposal information. Do not let water enter the street, gutter or storm drain.
- Use drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of materials in the trash.
- Use a ground cloth or oversized tub for mixing paint and cleaning tools.
- Use a damp mop or broom to clean floors.
- Cover dumpsters to keep insects, animals, rainwater and sand from entering. Keep the area around the dumpster clear of trash and debris. Do not overfill the dumpster.
- Call your trash hauler to replace leaking dumpsters.
- Do not dump any toxic substance or liquid waste on the pavement, the ground, or near a storm drain. Even materials that seem harmless such as latex paint or biodegradable cleaners can damage the environment.

NEVER DISPOSE OF ANYTHING IN THE STORM DRAIN.

- Recycle paints, solvents and other materials. For more information about recycling and collection centers, visit **www.oclandfills.com**.
- Store materials indoors or under cover and away from storm drains.
- Use a construction and demolition recycling company to recycle lumber, paper, cardboard, metals, masonry, carpet, plastic, pipes, drywall, rocks, dirt, and green waste. For a listing of construction and demolition recycling locations in your area, visit **www.ciwmb.ca.gov/recycle.**
- Properly label materials. Familiarize employees with Material Safety Data Sheets.

Site Design & Landscape Planning SD-10

Design Objectives

- ✓ Maximize Infiltration
- ✓ Provide Retention
- ✓ Slow Runoff
- ✓ Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Integrating and incorporating appropriate landscape planning methodologies into the project design is the most effective action that can be done to minimize surface and groundwater contamination from stormwater.

Approach

Landscape planning should couple consideration of land suitability for urban uses with consideration of community goals and projected growth. Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for site design and landscapes planning should conform to applicable standards and specifications of agencies with jurisdiction and be consistent with applicable General Plan and Local Area Plan policies.

CASQA California Stormwater Quality Association

SD-10 Site Design & Landscape Planning

Designing New Installations

Begin the development of a plan for the landscape unit with attention to the following general principles:

- Formulate the plan on the basis of clearly articulated community goals. Carefully identify conflicts and choices between retaining and protecting desired resources and community growth.
- Map and assess land suitability for urban uses. Include the following landscape features in the assessment: wooded land, open unwooded land, steep slopes, erosion-prone soils, foundation suitability, soil suitability for waste disposal, aquifers, aquifer recharge areas, wetlands, floodplains, surface waters, agricultural lands, and various categories of urban land use. When appropriate, the assessment can highlight outstanding local or regional resources that the community determines should be protected (e.g., a scenic area, recreational area, threatened species habitat, farmland, fish run). Mapping and assessment should recognize not only these resources but also additional areas needed for their sustenance.

Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Conserve Natural Areas during Landscape Planning

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Cluster development on least-sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.
- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.
- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.
- Promote natural vegetation by using parking lot islands and other landscaped areas.
- Preserve riparian areas and wetlands.

Maximize Natural Water Storage and Infiltration Opportunities Within the Landscape Unit

- Promote the conservation of forest cover. Building on land that is already deforested affects basin hydrology to a lesser extent than converting forested land. Loss of forest cover reduces interception storage, detention in the organic forest floor layer, and water losses by evapotranspiration, resulting in large peak runoff increases and either their negative effects or the expense of countering them with structural solutions.
- Maintain natural storage reservoirs and drainage corridors, including depressions, areas of permeable soils, swales, and intermittent streams. Develop and implement policies and

regulations to discourage the clearing, filling, and channelization of these features. Utilize them in drainage networks in preference to pipes, culverts, and engineered ditches.

- Evaluating infiltration opportunities by referring to the stormwater management manual for the jurisdiction and pay particular attention to the selection criteria for avoiding groundwater contamination, poor soils, and hydrogeological conditions that cause these facilities to fail. If necessary, locate developments with large amounts of impervious surfaces or a potential to produce relatively contaminated runoff away from groundwater recharge areas.

Protection of Slopes and Channels during Landscape Design

- Convey runoff safely from the tops of slopes.
- Avoid disturbing steep or unstable slopes.
- Avoid disturbing natural channels.
- Stabilize disturbed slopes as quickly as possible.
- Vegetate slopes with native or drought tolerant vegetation.
- Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.
- Stabilize temporary and permanent channel crossings as quickly as possible, and ensure that increases in run-off velocity and frequency caused by the project do not erode the channel.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.
- Line on-site conveyance channels where appropriate, to reduce erosion caused by increased flow velocity due to increases in tributary impervious area. The first choice for linings should be grass or some other vegetative surface, since these materials not only reduce runoff velocities, but also provide water quality benefits from filtration and infiltration. If velocities in the channel are high enough to erode grass or other vegetative linings, riprap, concrete, soil cement, or geo-grid stabilization are other alternatives.
- Consider other design principles that are comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

SD-10 Site Design & Landscape Planning

Redevelopment may present significant opportunity to add features which had not previously been implemented. Examples include incorporation of depressions, areas of permeable soils, and swales in newly redeveloped areas. While some site constraints may exist due to the status of already existing infrastructure, opportunities should not be missed to maximize infiltration, slow runoff, reduce impervious areas, disconnect directly connected impervious areas.

Efficient Irrigation SD-12

Design Objectives

- ✓ Maximize Infiltration
- ✓ Provide Retention
- ✓ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA California Stormwater Quality Association

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations
