Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program:

DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Feb 23, 2021

National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Feb 23, 2021

Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Feb 23, 2021

SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Mar 23, 2021

Inventory of Open Dumps, June 1985:

ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites:

[SEMS ARCHIVE](#)

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Mar 23, 2021

Comprehensive Environmental Response, Compensation and Liability Information System -

[CERCLIS](#)

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:

[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:

[RCRA CORRACTS](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 22, 2021

RCRA non-CORRACTS TSD Facilities:

[RCRA TSD](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Jan 22, 2021

RCRA Generator List:

[RCRA LQG](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 22, 2021

RCRA Small Quantity Generators List:

[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jan 22, 2021

RCRA Very Small Quantity Generators List:

[RCRA VSQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jan 22, 2021

RCRA Non-Generators:

[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jan 22, 2021

Federal Engineering Controls-ECs:

[FED ENG](#)

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 23, 2021

Federal Institutional Controls- ICs:

[FED INST](#)

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Feb 23, 2021

Land Use Control Information System:

[LUCIS](#)

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Emergency Response Notification System:

[ERNS 1982 TO 1986](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System:

[ERNS 1987 TO 1989](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System:

[ERNS](#)

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Nov 9, 2020

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:

[FED BROWNFIELDS](#)

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 6, 2021

FEMA Underground Storage Tank Listing:

[FEMA UST](#)

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan:

[FRP](#)

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 2, 2020

Historical Gas Stations:

[HIST GAS STATIONS](#)

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries:

[REFN](#)

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Jul 10, 2020

Petroleum Product and Crude Oil Rail Terminals:

[BULK TERMINAL](#)

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Apr 28, 2020

LIEN on Property:

[SEMS LIEN](#)

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Mar 23, 2021

Superfund Decision Documents:

[SUPERFUND ROD](#)

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Feb 23, 2021

State

State Response Sites:

[RESPONSE](#)

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Jan 13, 2021

EnviroStor Database:

[ENVIROSTOR](#)

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Jan 13, 2021

Delisted State Response Sites:

[DELISTED ENVS](#)

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Jan 13, 2021

Solid Waste Information System (SWIS):

[SWF/LF](#)

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Feb 8, 2021

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels:

[SWRCB SWF](#)

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

EnviroStor Hazardous Waste Facilities:

[HWP](#)

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Jan 13, 2021

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report:

[SWAT](#)

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Construction and Demolition Debris Recyclers:

[C&D DEBRIS RECY](#)

This listing of Construction and Demolition Debris Recyclers is maintained by the California Intergrated Waste Management Board-common C&D materials include lumber, drywall, metals, masonry (brick, concrete, etc.), carpet, plastic, pipe, rocks, dirt, paper, cardboard, or green waste related to land development.

Government Publication Date: Jun 20, 2018

Recycling Centers:

[RECYCLING](#)

This list of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Nov 2, 2020

Listing of Certified Processors:

[PROCESSORS](#)

This list of Certified Processors that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Oct 27, 2020

Listing of Certified Dropoff, Collection, and Community Service Programs:

[CONTAINER RECY](#)

This list of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Dec 16, 2020

Land Disposal Sites:

[LDS](#)

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Mar 9, 2021

Leaking Underground Fuel Tank Reports:

LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Mar 9, 2021

Delisted Leaking Storage Tanks:

DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Mar 9, 2021

Permitted Underground Storage Tank (UST) in GeoTracker:

UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Mar 23, 2021

Proposed Closure of Underground Storage Tank Cases:

UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: Feb 2, 2021

Historical Hazardous Substance Storage Information Database:

HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Statewide Environmental Evaluation and Planning System:

UST SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) is a historical listing of active and inactive underground storage tanks made available by the California State Water Resources Control Board (SWRCB).

Government Publication Date: Oct 1, 1994

Aboveground Storage Tanks:

AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

SWRCB Historical Aboveground Storage Tanks:

AST SWRCB

A list of aboveground storage tanks made available by the California State Water Resources Control Board (SWRCB). Effective January 1, 2008, the Certified Unified Program Agencies (CUPAs) are vested with the responsibility and authority to implement the Aboveground Petroleum Storage Act (APSA).

Government Publication Date: Dec 1, 2007

Oil and Gas Facility Tanks:

TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Apr 14, 2021

Delisted Storage Tanks:

DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Apr 14, 2021

California Environmental Reporting System (CERS) Tanks:

CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Feb 9, 2021

Delisted California Environmental Reporting System (CERS) Tanks:

DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Feb 9, 2021

Historical Hazardous Substance Storage Container Information - Facility Summary:

HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions:

LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Jan 13, 2021

CALSITES Database:

CALSITES

This historical database was maintained by the Department of Toxic Substance Control (DTSC) for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

Government Publication Date: May 1, 2004

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions:

HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Feb 18, 2021

Deed Restrictions and Land Use Restrictions:

DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Mar 9, 2021

Voluntary Cleanup Program:

VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Jan 13, 2021

GeoTracker Cleanup Program Sites:

CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Mar 9, 2021

Delisted County Records:

DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands:
LUSTs on Tribal/Indian Lands in Region 9, which includes California.
Government Publication Date: Apr 8, 2020

INDIAN LUST

Underground Storage Tanks (USTs) on Indian Lands:
USTs on Tribal/Indian Lands in Region 9, which includes California.
Government Publication Date: Apr 8, 2020

INDIAN UST

Delisted Tribal Leaking Storage Tanks:
Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.
Government Publication Date: Apr 14, 2020

DELISTED ILST

Delisted Tribal Underground Storage Tanks:
Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.
Government Publication Date: Apr 14, 2020

DELISTED IUST

County

Orange County - Industrial Cleanup Program Cases Listing:
Orange County Health Care Agency's Environmental Health Division has an Industrial Cleanup (IC) program which oversees the voluntary cleanup of contaminated property. This is a list of cases (by city) which the IC program has overseen in the past, or is currently overseeing.
Government Publication Date: Mar 1, 2021

ORANGE ICP

Orange County - LOP Lead Cases List:
The Local Oversight Program of the County of Orange provides regulatory cleanup oversight for cleanup of leaking underground storage tanks (USTs). This dataset is provided by the Orange County Health Care Agency.
Government Publication Date: Mar 1, 2021

ORANGE LOP

Orange County - Non-Petroleum Underground Storage Tank Cases:
This list of open and closed non-petroleum underground storage tank cases is maintained by the Orange County Health Care Agency.
Government Publication Date: Mar 1, 2021

OC NON-PETRO

Orange County - Underground Storage Tanks Listing:
A list of registered Underground Storage Tank (UST) sites in Orange County. This list is made available by Orange County Health Care Agency (OCHCA), Environmental Health Division which oversees the underground storage tank inspection program in most of the cities of Orange County, with the exception of Anaheim, Fullerton, and Orange.
Government Publication Date: Mar 1, 2021

UST ORANGE CNTY

Orange County - Aboveground Petroleum Storage Tank Listing:
A list of Aboveground Petroleum Storage Tank (APST) facilities inspected by Orange County Certified Unified Program Agency (CUPA) Under the Aboveground Petroleum Storage Act (APSA). This list is made available by the Environmental Health Division of Orange County Health Care Agency.
Government Publication Date: Mar 1, 2021

ORANGE AST

Orange County - Anaheim City UST Cleanup Cases:
A list of UST Cleanup Cases in the City of Anaheim in Orange County. As part of its Groundwater Protection Program, the City of Anaheim managed the UST Cleanup Oversight Program from April 1991 to June 2014. This list is published by the City of Anaheim Underground Storage Tank Cleanup Program.
Government Publication Date: May 26, 2015

UST CLEANUP

Orange County - Anaheim City UST List:

[ANAHEIM UST](#)

A list of Underground Storage Tanks in Anaheim City, Orange County. This list is made available by Anaheim Fire & Rescue Department.

Government Publication Date: Mar 16, 2021

Orange County - Anaheim City AST List:

[ANAHEIM AST](#)

List of Aboveground Storage Tanks (ASTs) in Anaheim City, Orange County made available by Anaheim Fire & Rescue.

Government Publication Date: Mar 16, 2021

Additional Environmental Record Sources

Federal

PFOA/PFOS Contaminated Sites:

[PFAS NPL](#)

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Mar 1, 2021

Facility Registry Service/Facility Index:

[FINDS/FRS](#)

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 2, 2020

Toxics Release Inventory (TRI) Program:

[TRIS](#)

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Releases:

[PFAS TRI](#)

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Water Quality:

[PFAS WATER](#)

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

Hazardous Materials Information Reporting System:

[HMIRS](#)

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs:

[NCDL](#)

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Oct 5, 2020

Toxic Substances Control Act:

[TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA:

[HIST TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

[FTTS ADMIN](#)

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing:

[FTTS INSP](#)

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:

[PRP](#)

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Feb 23, 2021

State Coalition for Remediation of Drycleaners Listing:

[SCRD DRYCLEANER](#)

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):

[ICIS](#)

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Mar 24, 2021

Drycleaner Facilities:

[FED DRYCLEANERS](#)

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Feb 17, 2021

Delisted Drycleaner Facilities:

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Feb 17, 2021

Formerly Used Defense Sites:

FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Jan 28, 2020

Former Military Nike Missile Sites:

FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 1, 1984

PHMSA Pipeline Safety Flagged Incidents:

PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS):

MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Aug 5, 2020

Historic Material Licensing Tracking System (MLTS) sites:

HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Nov 3, 2020

Surface Mining Control and Reclamation Act Sites:

SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Dec 18, 2020

Mineral Resource Data System:

MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2006

Uranium Mill Tailings Radiation Control Act Sites:

URANIUM

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

Government Publication Date: Mar 4, 2017

Alternative Fueling Stations:

ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Jan 18, 2021

Registered Pesticide Establishments:

SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Apr 13, 2021

Polychlorinated Biphenyl (PCB) Notifiers:

PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 19, 2020

State

Dry Cleaning Facilities:

DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Feb 22, 2021

Delisted Drycleaners:

DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Feb 22, 2021

Non-Toxic Dry Cleaning Incentive Program:

DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2018

Per- and Polyfluoroalkyl Substances (PFAS):

PFAS

List of sites from the State Water Resources Control Board (SWRCB)'s GeoTracker at which one or more of the potential contaminants of concern are in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Mar 9, 2021

PFOA/PFOS Groundwater:

PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Oct 22, 2020

Hazardous Waste and Substances Site List - Site Cleanup:

HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Nov 10, 2020

List of Hazardous Waste Facilities Subject to Corrective Action:

DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement:

INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Oct 7, 2020

School Property Evaluation Program Sites:

SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Jan 13, 2021

California Hazardous Material Incident Report System (CHMIRS):

CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 21, 2021

Historical California Hazardous Material Incident Report System (CHMIRS):

HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Hazardous Waste Manifest Data:

HAZNET

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Oct 24, 2016

Historical Hazardous Waste Manifest Data:

HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

DTSC Registered Hazardous Waste Transporters:

HW TRANSPORT

The California Department of Toxic Substances Control (DTSC) maintains this list of Registered Hazardous Waste Transporters.

Government Publication Date: Oct 19, 2020

Registered Waste Tire Haulers:

WASTE TIRE

This list of registered waste tire haulers is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Dec 16, 2020

California Medical Waste Management Program Facility List:

MEDICAL WASTE

This list of Medical Waste Management Program Facilities is maintained by the California Department of Public Health. The Medical Waste Management Program (MWMP) regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations. This list contains transporters, treatment, and transfer facilities.

Government Publication Date: Dec 31, 2020

Historical Cortese List:

[HIST CORTESE](#)

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders:

[CDO/CAO](#)

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

California Environmental Reporting System (CERS) Hazardous Waste Sites:

[CERS HAZ](#)

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Feb 9, 2021

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites:

[DELISTED HAZ](#)

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker:

[GEOTRACKER](#)

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Mar 9, 2021

Mines Listing:

[MINE](#)

This list includes mine site locations extracted from the Mines Online database, maintained by the California Department of Conservation. Mines Online (MOL) is an interactive web map designed with GIS features that provide information such as the mine name, mine status, commodity sold, location, and other mine specific data. Please note: Mine location information is provided to assist experts in determining the location of mine operators in accordance with California Civil Code section 1103.4 and reflects information reported by mine operators in annual reports provided under Public Resources Code section 2207. While the Division of Mine Reclamation (DMR) attempts to populate MOL with accurate location information, the DMR cannot guarantee the accuracy of operator reported location information.

Government Publication Date: Jan 12, 2021

Recorded Environmental Cleanup Liens:

[LIEN](#)

The California Department of Toxic Substance Control (DTSC) maintains this list of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

Government Publication Date: Nov 16, 2020

Waste Discharge Requirements:

[WASTE DISCHG](#)

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Mar 9, 2021

Toxic Pollutant Emissions Facilities:

[EMISSIONS](#)

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2018

Clandestine Drug Lab Sites:

CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/ clandestine drug laboratories.

Government Publication Date: Jan 19, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

Orange County - Hazardous Waste Facilities:

ORANGE HW

A list of Hazardous Waste Facilities in Orange County. This list is made available by Orange County Environmental Health Department.

Government Publication Date: Mar 1, 2021

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

RE: CITY DIRECTORY RESEARCH
PNR0651KW1/655A (DJT4)
275 Valencia Avenue Brea, CA

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

1-3600 of Valencia Avenue
3000-3500 of E Birch St
All of Surveyor Ave
All of Nasa St

Detail Report.....	46
Radon Information.....	500
Appendix.....	501
Liability Notice.....	503

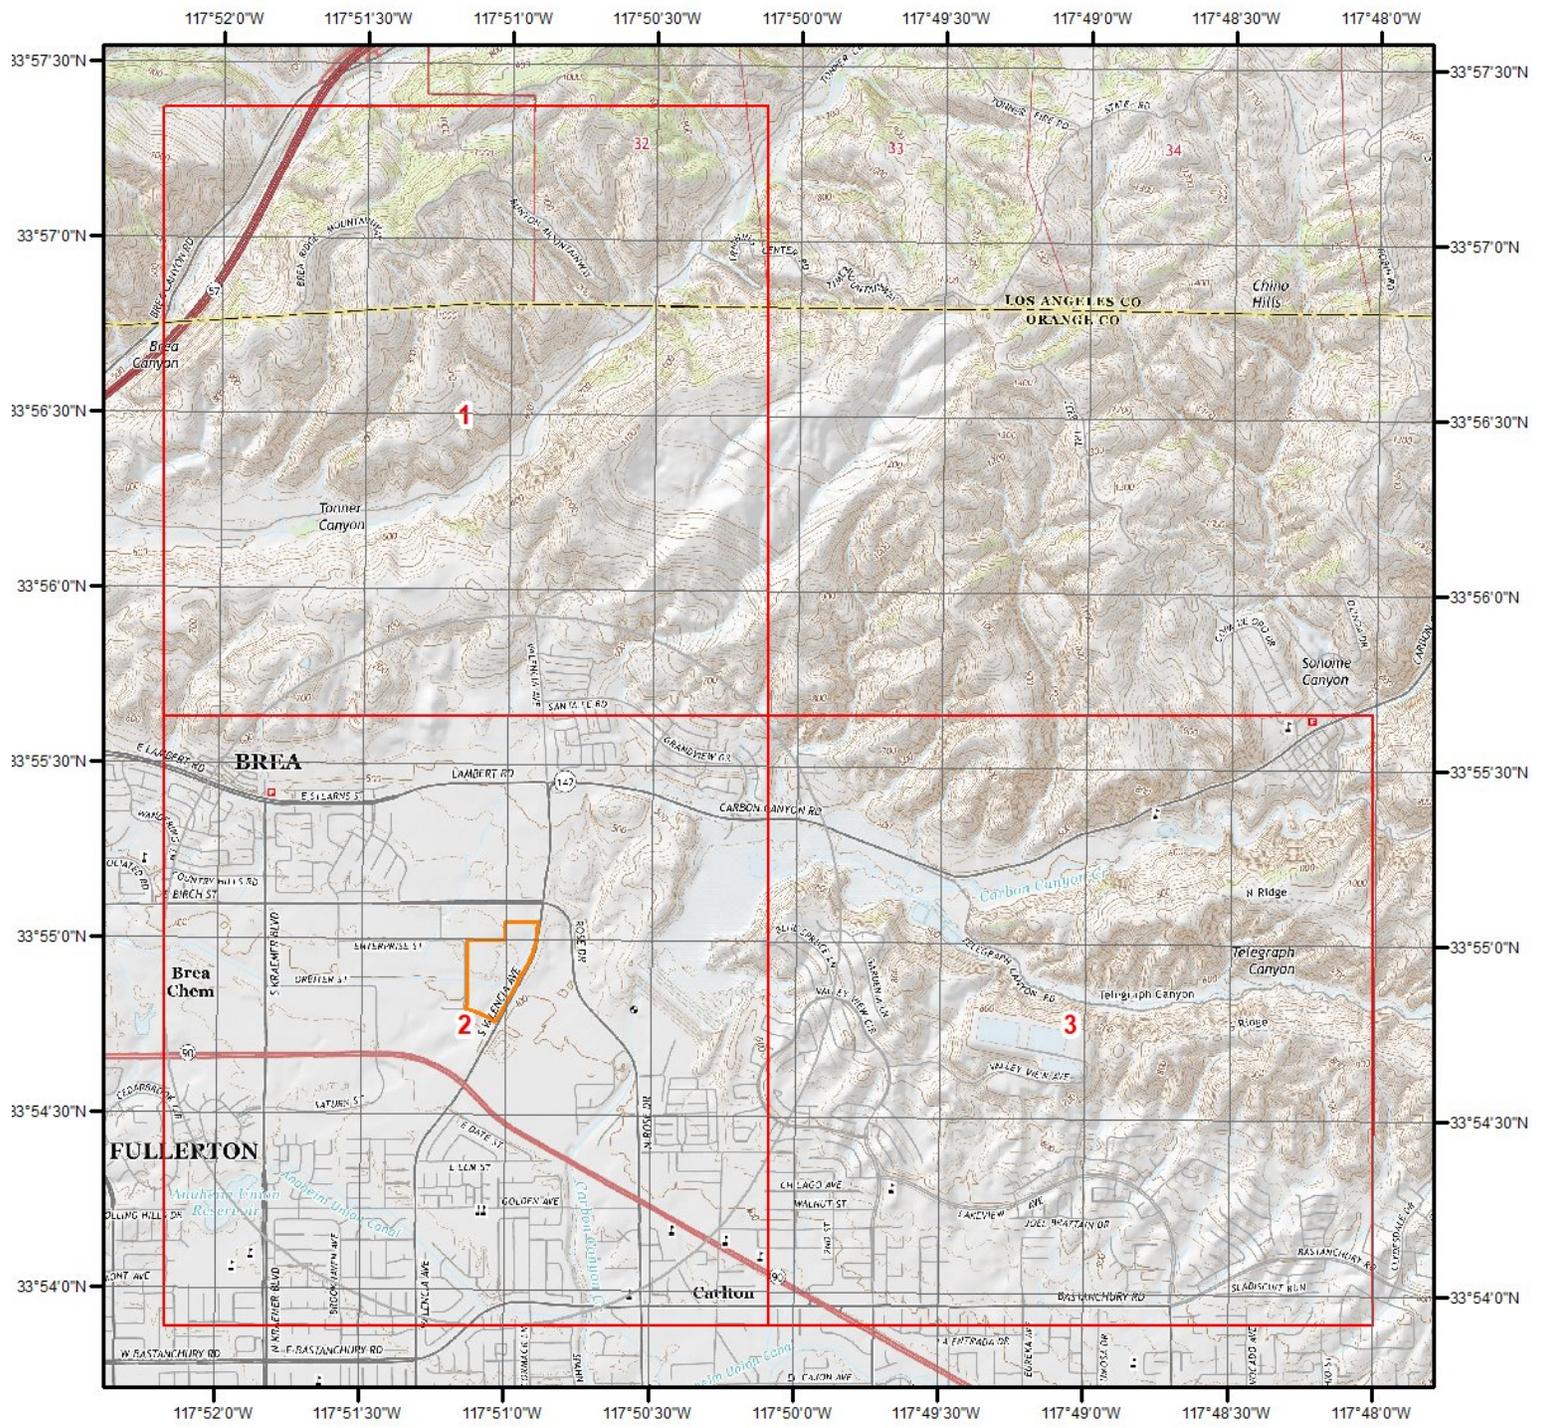

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

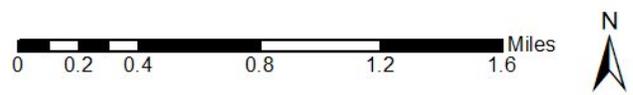

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Geologic Information

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Q

Unit Name:	Quaternary alluvium and marine deposits
Unit Age:	Pliocene to Holocene
Primary Rock Type:	alluvium
Secondary Rock Type:	terrace
Unit Description:	Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine, but includes marine deposits near the coast.

Geologic Unit P

Unit Name:	Pliocene marine rocks
Unit Age:	Miocene to Pleistocene
Primary Rock Type:	sandstone
Secondary Rock Type:	mudstone
Unit Description:	Sandstone, siltstone, shale, and conglomerate; in part Pleistocene and Miocene.

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit 101 (0.09%)

Map Unit Name:	Alo clay, 15 to 30 percent slopes
Bedrock Depth - Min:	56cm
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.

Major components are printed below

Alo(85%)	
horizon H1(0cm to 38cm)	Clay
horizon H1(38cm to 56cm)	Clay
horizon H3(56cm to 150cm)	Weathered bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 101 - Alo clay, 15 to 30 percent slopes, dry

Component: Alo (85%)

The Alo component makes up 85 percent of the map unit. Slopes are 15 to 30 percent. This component is on foothills, ridges. The parent material consists of residuum weathered from calcareous sandstone or shale. Depth to a root restrictive layer, bedrock, paralithic, is 22 to 26 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R019XD001CA Clayey (1975) ecological site. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Anaheim (5%)

Generated brief soil descriptions are created for major soil components. The Anaheim, clay loam soil is a minor component.

Component: Bonsall (5%)

Generated brief soil descriptions are created for major soil components. The Bonsall, clay soil is a minor component.

Component: Balcom (5%)

Generated brief soil descriptions are created for major soil components. The Balcom, clay loam soil is a minor component.

Map Unit 107 (0.14%)

Map Unit Name:	Anaheim loam, 30 to 50 percent slopes
Bedrock Depth - Min:	66cm
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Anaheim(75%)	
horizon A(0cm to 66cm)	Loam
horizon Cr(66cm to 150cm)	Weathered bedrock

Component Description:

Soil Information

Minor map unit components are excluded from this report.

Map Unit: 107 - Anaheim loam, 30 to 50 percent slopes

Component: Anaheim (85%)

The Anaheim component makes up 85 percent of the map unit. Slopes are 30 to 50 percent. This component is on hills, hillslopes. The parent material consists of fine grained residuum weathered from sandstone and shale. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 39 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R019XD029CA Loamy (1975) ecological site. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria.

Component: Anaheim (7%)

Generated brief soil descriptions are created for major soil components. The Anaheim soil is a minor component.

Component: Cieneba (4%)

Generated brief soil descriptions are created for major soil components. The Cieneba soil is a minor component.

Component: Nacimiento (4%)

Generated brief soil descriptions are created for major soil components. The Nacimiento soil is a minor component.

Map Unit 112 (0.3%)

Map Unit Name: Balcom clay loam, 15 to 30 percent slopes

Bedrock Depth - Min: 86cm

Watertable Depth - Annual Min:

Drainage Class - Dominant: Well drained

Hydrologic Group - Dominant: C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Balcom(85%)

horizon A(0cm to 48cm)

Clay loam

horizon Bk(48cm to 86cm)

Clay loam

horizon Cr(86cm to 111cm)

Weathered bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 112 - Balcom clay loam, 15 to 30 percent slopes

Component: Balcom (85%)

The Balcom component makes up 85 percent of the map unit. Slopes are 15 to 30 percent. This component is on hillslopes, hills. The parent material consists of calcareous residuum weathered from sandstone and shale. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 39 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD001CA Clayey (1975) ecological site. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 18 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Bosanko (5%)

Generated brief soil descriptions are created for major soil components. The Bosanko soil is a minor component.

Component: Calleguas (5%)

Generated brief soil descriptions are created for major soil components. The Calleguas soil is a minor component.

Component: Cieneba (5%)

Generated brief soil descriptions are created for major soil components. The Cieneba soil is a minor component.

Soil Information

Map Unit 113 (0.02%)

Map Unit Name:	Balcom clay loam, 30 to 50 percent slopes
Bedrock Depth - Min:	76cm
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.
Major components are printed below	
Balcom(85%)	
horizon H1(0cm to 76cm)	Clay loam
horizon H2(76cm to 150cm)	Weathered bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 113 - Balcom clay loam, 30 to 50 percent slopes

Component: Balcom (85%)

The Balcom component makes up 85 percent of the map unit. Slopes are 30 to 50 percent. This component is on hills. The parent material consists of calcareous residuum weathered from sandstone and shale. Depth to a root restrictive layer, bedrock, paralithic, is 24 to 36 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD001CA Unspecified ecological site. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Bosanko (5%)

Generated brief soil descriptions are created for major soil components. The Bosanko, CLAY soil is a minor component.

Component: Calleguas (4%)

Generated brief soil descriptions are created for major soil components. The Calleguas, CLAY LOAM soil is a minor component.

Component: Unnamed (3%)

Generated brief soil descriptions are created for major soil components. The Unnamed soil is a minor component.

Component: Cieneba (3%)

Generated brief soil descriptions are created for major soil components. The Cieneba, SANDY LOAM soil is a minor component.

Map Unit 134 (0.41%)

Map Unit Name:	Calleguas clay loam, 50 to 75 percent slopes, eroded
Bedrock Depth - Min:	38cm
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.
Major components are printed below	
Calleguas(75%)	
horizon H1(0cm to 38cm)	Clay loam
horizon H2(38cm to 48cm)	Weathered bedrock

Component Description:

Minor map unit components are excluded from this report.

Soil Information

Map Unit: 134 - Calleguas clay loam, 50 to 75 percent slopes, eroded

Component: Calleguas (85%)

The Calleguas component makes up 85 percent of the map unit. Slopes are 50 to 75 percent. This component is on hillslopes, hills. The parent material consists of residuum weathered from calcareous shale. Depth to a root restrictive layer, bedrock, paralithic, is 10 to 20 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD071CA Shallow Clayey (1975) ecological site. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Cieneba (5%)

Generated brief soil descriptions are created for major soil components. The Cieneba soil is a minor component.

Component: Anaheim (5%)

Generated brief soil descriptions are created for major soil components. The Anaheim soil is a minor component.

Component: Balcom (5%)

Generated brief soil descriptions are created for major soil components. The Balcom soil is a minor component.

Map Unit 163 (3.43%)

Map Unit Name: Metz loamy sand

Bedrock Depth - Min:

Watertable Depth - Annual Min:

Drainage Class - Dominant: Somewhat excessively drained

Hydrologic Group - Dominant: B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Metz(80%)

horizon H1(0cm to 43cm)

Loamy sand

horizon H2(43cm to 160cm)

Stratified sand to fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 163 - Metz loamy sand

Component: Metz (80%)

The Metz component makes up 80 percent of the map unit. Slopes are 0 to 2 percent. This component is on alluvial fans. The parent material consists of alluvium derived from mixed. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat excessively drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD035CA Sandy (1975) ecological site. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 2s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

Component: San Emigdio (4%)

Generated brief soil descriptions are created for major soil components. The San Emigdio soil is a minor component.

Component: Hueneme (4%)

Generated brief soil descriptions are created for major soil components. The Hueneme soil is a minor component.

Component: Riverwash (4%)

Generated brief soil descriptions are created for major soil components. The Riverwash soil is a minor component.

Component: Corralitos (4%)

Generated brief soil descriptions are created for major soil components. The Corralitos soil is a minor component.

Soil Information

Component: Metz (4%)

Generated brief soil descriptions are created for major soil components. The Metz soil is a minor component.

Map Unit 166 (78.47%)

Map Unit Name: Mocho loam, 0 to 2 percent slopes, warm MAAT, MLRA 19

Bedrock Depth - Min:

Watertable Depth - Annual Min:

Drainage Class - Dominant: Well drained

Hydrologic Group - Dominant: B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Mocho(85%)

horizon Ap(0cm to 25cm) Loam

horizon A(25cm to 41cm) Loam

horizon Ck1(41cm to 86cm) Loam

horizon Ck2(86cm to 152cm) Loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 166 - Mocho loam, 0 to 2 percent slopes, warm MAAT, MLRA 19

Component: Mocho (85%)

The Mocho component makes up 85 percent of the map unit. Slopes are 0 to 2 percent. This component is on alluvial plains, alluvial fans. The parent material consists of alluvium derived from sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R019XD029CA Loamy (1975) ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 8 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Sorrento (6%)

Generated brief soil descriptions are created for major soil components. The Sorrento soil is a minor component.

Component: Bolsa (3%)

Generated brief soil descriptions are created for major soil components. The Bolsa soil is a minor component.

Component: Hueneme (2%)

Generated brief soil descriptions are created for major soil components. The Hueneme soil is a minor component.

Component: Anacapa (2%)

Generated brief soil descriptions are created for major soil components. The Anacapa soil is a minor component.

Component: Mocho (1%)

Generated brief soil descriptions are created for major soil components. The Mocho soil is a minor component.

Component: Chino (1%)

Generated brief soil descriptions are created for major soil components. The Chino soil is a minor component.

Map Unit 167 (0.62%)

Map Unit Name: Mocho loam, 2 to 9 percent slopes, warm MAAT, MLRA 19

Bedrock Depth - Min:

Watertable Depth - Annual Min:

Drainage Class - Dominant: Well drained

Soil Information

Hydrologic Group - Dominant: B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Mocho(85%)	
horizon H1(0cm to 41cm)	Loam
horizon H2(41cm to 152cm)	Loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 167 - Mocho loam, 2 to 9 percent slopes, warm MAAT, MLRA 19

Component: Mocho (85%)

The Mocho component makes up 85 percent of the map unit. Slopes are 2 to 9 percent. This component is on alluvial fans, alluvial plains, valleys. The parent material consists of alluvium derived from sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R019XD029CA Loamy (1975) ecological site. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 8 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Sorrento (4%)

Map Unit 173 (6.34%)

Map Unit Name: Myford sandy loam, 2 to 9 percent slopes

Bedrock Depth - Min:

Watertable Depth - Annual Min:

Drainage Class - Dominant: Moderately well drained

Hydrologic Group - Dominant: D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.

Major components are printed below

Myford(70%)	
horizon A1(0cm to 2cm)	Sandy loam
horizon A2(2cm to 10cm)	Sandy loam
horizon A3(10cm to 30cm)	Sandy loam
horizon Bt1(30cm to 46cm)	Sandy clay
horizon Bt2(46cm to 71cm)	Sandy clay loam
horizon Btk1(71cm to 89cm)	Sandy clay loam

Soil Information

horizon Btk2(89cm to 104cm)	Sandy clay loam
horizon Bt1(104cm to 124cm)	Sandy clay loam
horizon Bt2(124cm to 155cm)	Sandy clay loam
horizon Bt3(155cm to 180cm)	Sandy clay loam
horizon C(180cm to 201cm)	Sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 173 - Myford sandy loam, 2 to 9 percent slopes

Component: Myford (75%)

The Myford component makes up 75 percent of the map unit. Slopes are 2 to 9 percent. This component is on terraces, alluvial plains. The parent material consists of alluvium derived from sandstone. Depth to a root restrictive layer, abrupt textural change, is 8 to 20 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD061CA Claypan (1975) ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Myford (10%)

Generated brief soil descriptions are created for major soil components. The Myford soil is a minor component.

Component: Yorba (5%)

Generated brief soil descriptions are created for major soil components. The Yorba soil is a minor component.

Component: Capistrano (5%)

Generated brief soil descriptions are created for major soil components. The Capistrano soil is a minor component.

Component: Chesterton (3%)

Generated brief soil descriptions are created for major soil components. The Chesterton soil is a minor component.

Component: Water (2%)

Generated brief soil descriptions are created for major soil components. The Water soil is a minor component.

Map Unit 175 (1.66%)

Map Unit Name: Myford sandy loam, 9 to 15 percent slopes

Bedrock Depth - Min:

Watertable Depth - Annual Min:

Drainage Class - Dominant: Moderately well drained

Hydrologic Group - Dominant: D - Soils in this group have high runoff potential when thoroughly wet. Water movement through the soil is restricted or very restricted.

Major components are printed below

Riverwash(100%)

horizon H1(0cm to 15cm)

Sand

horizon H2(15cm to 152cm)

Stratified coarse sand to sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 191 - Riverwash

Component: Riverwash (100%)

Generated brief soil descriptions are created for major soil components. The Riverwash is a miscellaneous area.

Soil Information

Map Unit 195 (0.12%)

Map Unit Name:	San Emigdio fine sandy loam, 2 to 9 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.
Major components are printed below	
San Emigdio(85%)	
horizon H1(0cm to 18cm)	Fine sandy loam
horizon H2(18cm to 155cm)	Stratified gravelly loamy coarse sand to very fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 195 - San Emigdio fine sandy loam, 2 to 9 percent slopes

Component: San Emigdio (85%)

The San Emigdio component makes up 85 percent of the map unit. Slopes are 2 to 9 percent. This component is on alluvial fans, coastal plains. The parent material consists of mixed alluvium derived from igneous, metamorphic and sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD029CA Loamy (1975) ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Mocho (4%)

Generated brief soil descriptions are created for major soil components. The Mocho soil is a minor component.

Component: Palmview (4%)

Generated brief soil descriptions are created for major soil components. The Palmview soil is a minor component.

Component: Sorrento (4%)

Generated brief soil descriptions are created for major soil components. The Sorrento soil is a minor component.

Component: Capistrano (3%)

Generated brief soil descriptions are created for major soil components. The Capistrano soil is a minor component.

Map Unit 207 (1.39%)

Map Unit Name:	Sorrento loam, 2 to 9 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.
Major components are printed below	
Sorrento(65%)	
horizon Ap1(0cm to 15cm)	Loam
horizon Ap2(15cm to 30cm)	Loam
horizon AB1(30cm to 53cm)	Silty clay loam
horizon AB2(53cm to 69cm)	Silty clay loam
horizon AB3(69cm to 94cm)	Silty clay loam

Soil Information

horizon Bk1(94cm to 124cm)	Silty clay loam
horizon Bk2(124cm to 157cm)	Silty clay loam
horizon 2C(157cm to 183cm)	Stratified loamy fine sand to silt loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 207 - Sorrento loam, 2 to 9 percent slopes, warm MAAT, MLRA 19

Component: Sorrento (85%)

The Sorrento component makes up 85 percent of the map unit. Slopes are 2 to 9 percent. This component is on alluvial fans, alluvial plains. The parent material consists of alluvium derived from sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R019XD029CA Loamy (1975) ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Mocho (7%)

Generated brief soil descriptions are created for major soil components. The Mocho soil is a minor component.

Component: Pico (2%)

Generated brief soil descriptions are created for major soil components. The Pico soil is a minor component.

Component: Garretson (2%)

Generated brief soil descriptions are created for major soil components. The Garretson soil is a minor component.

Component: Anacapa (2%)

Generated brief soil descriptions are created for major soil components. The Anacapa soil is a minor component.

Component: Botella (2%)

Generated brief soil descriptions are created for major soil components. The Botella soil is a minor component.

Map Unit 223 (0.13%)

Map Unit Name:	Yorba gravelly sandy loam, 15 to 30 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Yorba(85%)

horizon H1(0cm to 28cm)	Gravelly sandy loam
horizon H2(28cm to 102cm)	Very cobbly clay loam
horizon H2(28cm to 102cm)	Very gravelly clay loam
horizon H2(28cm to 102cm)	Very gravelly sandy clay loam
horizon H3(102cm to 160cm)	Very gravelly sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 223 - Yorba gravelly sandy loam, 15 to 30 percent slopes

Component: Yorba (85%)

The Yorba component makes up 85 percent of the map unit. Slopes are 15 to 30 percent. This component is on terraces. The parent material consists of sandy and gravelly alluvium derived from mixed. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of

Soil Information

60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD061CA Unspecified ecological site. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria.

Component: Gabino (5%)

Generated brief soil descriptions are created for major soil components. The Gabino, GRAVELLY CLAY LOAM soil is a minor component.

Component: Myford (5%)

Generated brief soil descriptions are created for major soil components. The Myford, SANDY LOAM soil is a minor component.

Component: Soper (3%)

Generated brief soil descriptions are created for major soil components. The Soper, GRAVELLY LOAM soil is a minor component.

Component: Modjeska (2%)

Generated brief soil descriptions are created for major soil components. The Modjeska, GRAVELLY LOAM soil is a minor component.

Map Unit 226 (0.08%)

Map Unit Name: Yorba cobbly sandy loam, 30 to 50 percent slopes

Bedrock Depth - Min:

Watertable Depth - Annual Min:

Drainage Class - Dominant: Well drained

Hydrologic Group - Dominant: C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Yorba(85%)

horizon H1(0cm to 28cm)

Very cobbly sandy loam

horizon H2(28cm to 102cm)

Very gravelly sandy clay loam

horizon H3(102cm to 160cm)

Very gravelly sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 226 - Yorba cobbly sandy loam, 30 to 50 percent slopes

Component: Yorba (85%)

The Yorba component makes up 85 percent of the map unit. Slopes are 30 to 50 percent. This component is on terraces, alluvial plains. The parent material consists of sandy and gravelly alluvium derived from mixed. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD061CA Claypan (1975) ecological site. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria.

Component: Myford (5%)

Generated brief soil descriptions are created for major soil components. The Myford soil is a minor component.

Component: Gabino (5%)

Generated brief soil descriptions are created for major soil components. The Gabino soil is a minor component.

Component: Soper (3%)

Generated brief soil descriptions are created for major soil components. The Soper soil is a minor component.

Component: Modjeska (2%)

Generated brief soil descriptions are created for major soil components. The Modjeska soil is a minor component.

Soil Information

Map Unit 229 (0.27%)

Map Unit Name: Dam

No more attributes available for this map unit

Component Description:

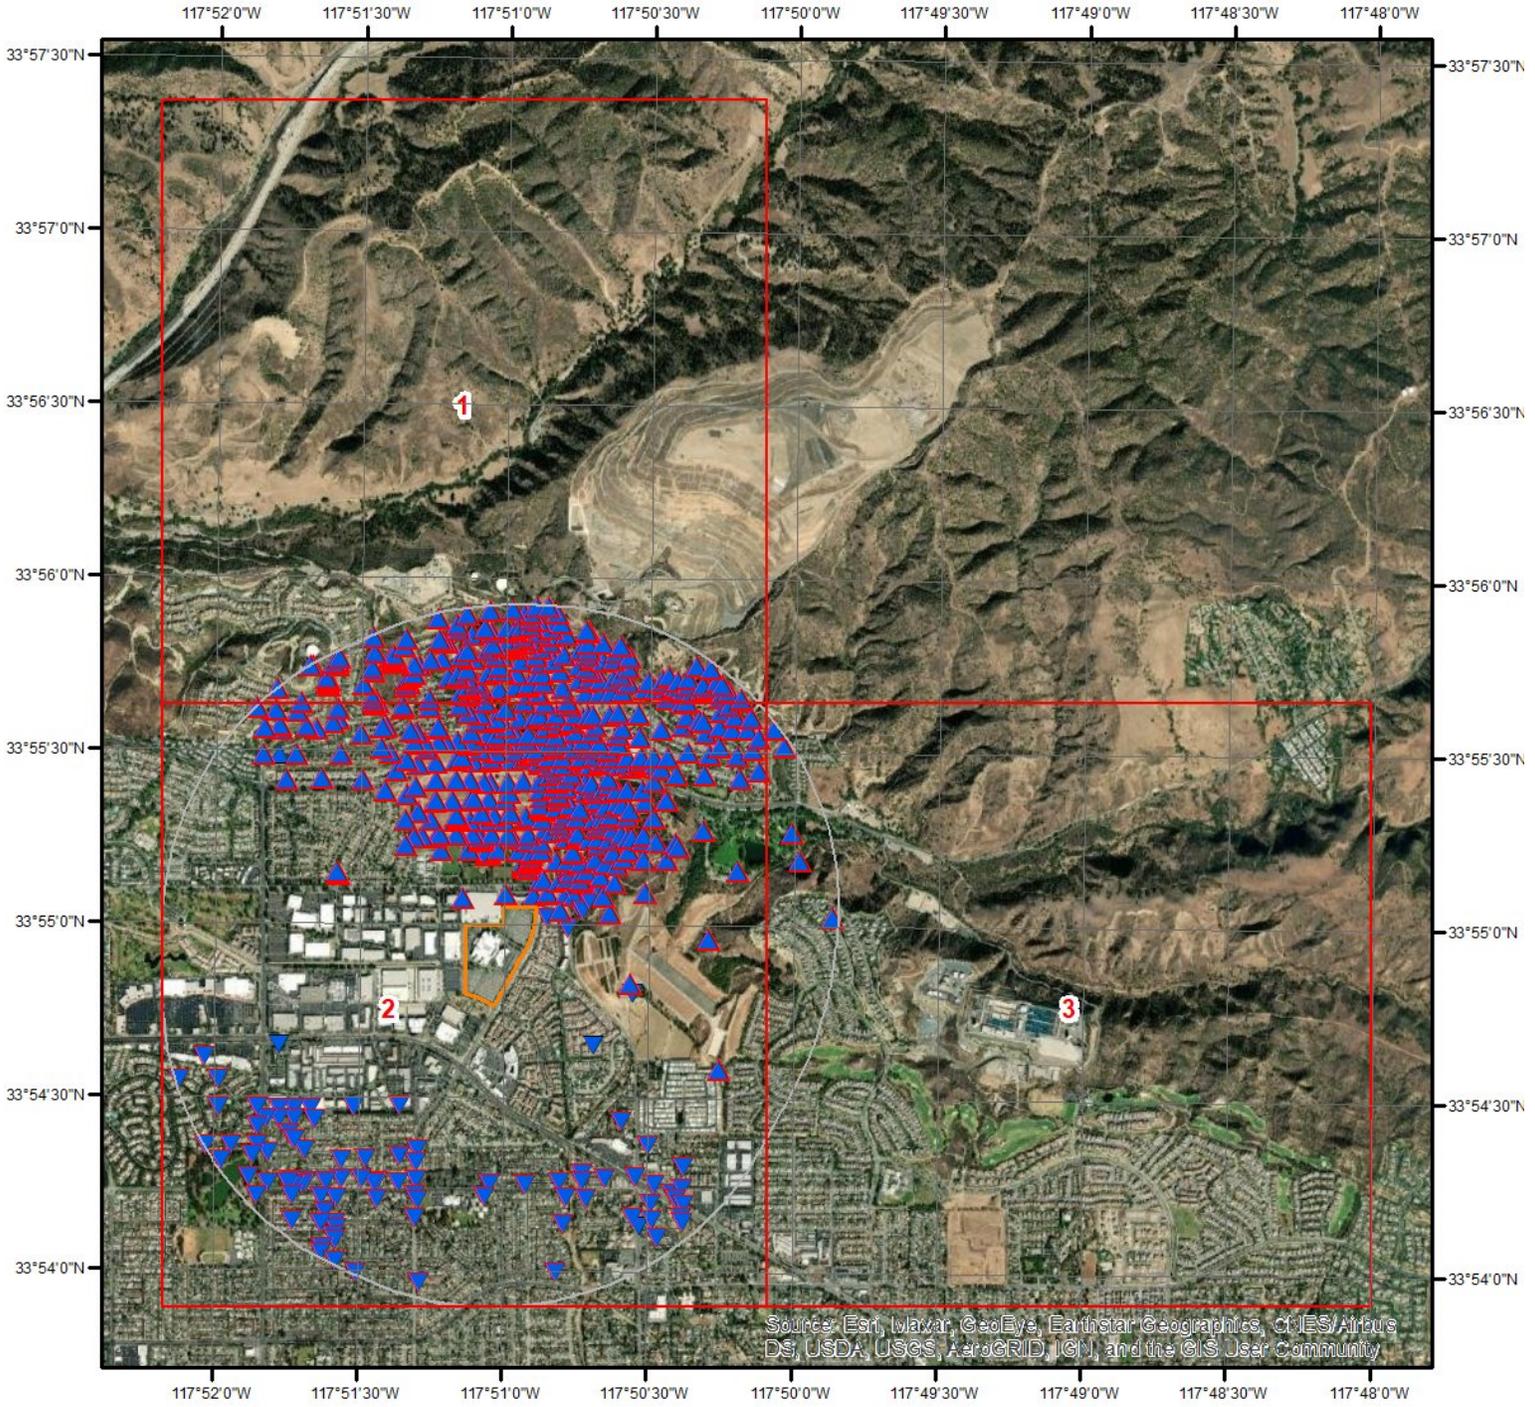

Minor map unit components are excluded from this report.

Map Unit: 229 - Dams

Component: Dams (100%)

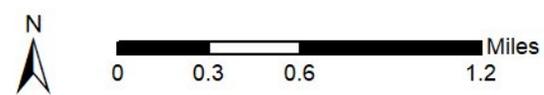

Generated brief soil descriptions are created for major soil components. The Dam is a miscellaneous area.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *ORANGE* County: **3**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L

Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L

Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *ORANGE* County

No Measures/Homes:	31
Geometric Mean:	0.5
Arithmetic Mean:	0.7
Median:	0.6
Standard Deviation:	0.7
Maximum:	2.2
% >4 pCi/L:	0
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of California conducted during 1989-90. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Federal Sources

FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data

US WETLAND

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System

FED USGS

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

Oil and Gas Wells

OGW

A list of Oil and Gas well locations. This is provided by California's Department of Conservation Division of

Appendix

Oil, Gas and Geothermal Resources.

Periodic Groundwater Level Measurement Locations

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

MONITOR WELLS

Well Completion Reports

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.

APPENDIX F

Environmental Professional Resumes

Environmental Professional Qualifications

Wendy Key, P.G. (CA, WA), C.E.M. (NV)

Ms. Key is a licensed geologist with over 15 years of experience in variety of environmental projects in both the public and private sectors. She has experience in the management, planning, implementation, data analysis, and reporting phases of environmental assessments including ASTM-compliant Phase I Environmental Site Assessments (ESAs), subsurface soil and groundwater investigations, and Brownfields redevelopment projects. Ms. Key also conducts environmental compliance assessments and audits to assist businesses looking to achieve and maintain compliance with environmental regulations in California and Nevada. Ms. Key provides support to companies with regulatory issues/violations and businesses seeking assistance with agency interaction, strategy, and litigation support/risk reduction. Ms. Key has served as a technical reviewer on large litigation projects and has provided litigation support in a variety of environmental cases. Her management experience includes communicating with clients and client attorneys to meet project goals, coordination with regulatory agencies to meet designated requirements and cleanup goals and managing field staff and activities. Ms. Key holds a bachelor's in science degree in Geology from California State University, Sacramento and a master's in science degree in Geology from the University of Nevada, Reno. Ms. Key is a licensed Professional Geologist (PG) in the states of California and Washington and a Certified Environmental Manager (CEM) in the state of Nevada.

Kimberly Brandt, P.G., C.Hg. (CA)

Ms. Brandt has over 20 years' experience in consulting, with emphases on strategic planning, management, and technical focus of characterization and remediation of environmental and hazardous waste sites throughout California. She has worked a variety of projects, including single- and multi-property Phase I Environmental Site Assessments and investigation and remediation of facilities ranging from a gasoline service station to a closed military installation. Ms. Brandt has conducted and/or managed more than 200 Phase I ESAs throughout the United States in accordance with ASTM standards to evaluate the presence of "recognized environmental conditions" associated with the subject properties. The Phase I ESAs have involved a variety of property usages including commercial/retail, manufacturing, agricultural, and office/light industrial. Based on the results of Phase I ESAs, numerous Phase II site characterizations have been performed to assess potential impacts resulting from historical activities. Activities conducted include surface geophysical surveys; asbestos and lead-based surveys; soil, soil vapor, groundwater and surface water assessments; human health risk assessments; developing estimated site cleanup costs and liability valuation; developing cleanup goals based on the current and/or future intended site usage; regulatory support and coordination; and litigation support. Ms. Brandt holds a Bachelor's degree in geology.

Environmental Professional Qualifications

Gib Fates, MS, PG (CA)

Mr. Fates is a Senior Consultant in the Geosyntec Santa Barbara, California Office. He is a licensed Professional Geologist in California and has over 30 years of experience in conducting and overseeing environmental due diligence, brownfields redevelopment, and site assessment and remediation programs throughout California, as well as in Nevada, Utah, Arizona and Alaska. He possesses specific expertise in environmental program strategy development and regulatory negotiation, pre-acquisition and pre-divestiture due diligence evaluations, complex site characterization efforts, and water quality and hydrogeological evaluations. Mr. Fates has worked with a broad range of client organizations in both the private and public sectors, encompassing land development, manufacturing, chemical and oil & gas, waste management, power generation, water resources, and transportation and infrastructure. Mr. Fates holds both Bachelor's and a Master's degrees in geology.

Paige Farrell

Ms. Farrell is a Project Scientist in the Geosyntec Long Beach Office. She has nearly six years of experience in environmental site investigation, assessment, remediation, and litigation support. She is currently involved in multiple litigation, environmental site assessment, and due diligence projects. Her experience includes managing projects in Phase II Environmental Site Assessment; site remediation, site characterization, waste disposal under state and federal regulations; litigations support; and regulatory communication. Ms. Farrell holds a Bachelor's degree in Earth Science from the University of California, Santa Barbara and a Master's degree in Climatology from the University of Idaho.

Lucas Henry, EIT

Mr. Henry is a Senior Staff Engineer with over a year of experience working in environmental consulting. He has supported a variety of contaminated sediments cleanup projects, has participated in multiple surface and subsurface sediment sampling events, and has assisted in the selection and inspection of stormwater best management practices. He is currently an Engineer in Training (EIT) in the state of Washington and is a qualified compliance inspector of stormwater in the state of Montana. Mr. Henry has completed a Bachelor of Science in Chemical Engineering and a Master of Science in Environmental Engineering from the University of Arizona.

Madeline Ferry

Ms. Ferry is a Staff Scientist in the Geosyntec Seattle office. She has been in the environmental consulting industry since 2019 with a focus in due diligence, specifically in Phase I Environmental Site Assessments throughout the United States in accordance with ASTM standards and client requirements. Her responsibilities have included report writing, conducting field work, and

Environmental Professional Qualifications

historical research. Ms. Ferry holds a Bachelor's degree in Environmental Analysis from Scripps College in Claremont, California.

Joshua Nandi

Mr. Nandi is an environmental engineer with over seven years of experience in site assessment and remediation consulting. He has performed Phase I ESAs, Phase II environmental investigations, and remediation on properties throughout the United States. Mr. Nandi has designed, implemented and managed various phases of site characterizations, feasibility studies, cost estimations, remediation engineering design and implementation and health risk assessments at numerous contaminated sites under various federal, state and local environmental regulatory agencies. He has performed remediation engineering for sites contaminated with petroleum hydrocarbons, chlorinated hydrocarbons, 1,4-dioxane, light non-aqueous phase liquid (LNAPL), dense non-aqueous phase liquids (DNAPL), NDMA, perchlorate and nitrate, and has tailored a wide variety of ex-situ and in-situ techniques applicable to each specific project. Mr. Nandi holds a Bachelor's degree in Civil Engineering from the University of California, Irvine and a Master's degree in Environmental Engineering from the University of California, Los Angeles.

**APPENDIX D.2:
UPDATED LIMITED
ENVIRONMENTAL SITE ASSESSMENT**

This page intentionally left blank.

16 July 2021

Ms. Tracey Schwartz
Amazon.com Services LLC
300 Boren Ave N
Seattle, Washington

**Subject: Updated Limited Environmental Site Assessment
Amazon Site Code: DJT4
275 Valencia Avenue, Brea, California**

Dear Ms. Schwartz,

Geosyntec Consultants, Inc. (Geosyntec) is pleased to submit this Updated Limited Environmental Site Assessment (ESA) report documenting soil vapor sampling, sub-slab vapor sampling, and soil sampling assessment and methane screening activities performed by Geosyntec at the property located at 275 Valencia Avenue, Brea, California (the “Site”).

OBJECTIVES AND SCOPE OF WORK

The Initial Limited ESA and Additional Limited ESA scopes of work were developed to assess potential vapor intrusion and methane risk associated within the Site. To meet the above objective, the Initial Limited ESA scope of work included installation and sampling of six triple-nested soil vapor probes in the exterior areas of the Site and in general accordance with the City of Brea Combustible Soil-Gas Guideline (Updated 5/2020). Based on the results of the Initial Limited ESA, an additional scope of work was developed. This included advancement of seven borings, installation and sampling of two soil vapor probes and three sub-slab vapor probes. Two soil samples were also collected as part of the additional scope of work to assess for potential subsurface impacts in the vicinity of: (i) a reportedly abandoned on-Site underground storage tank (UST); and (ii) soil vapor probe SVP-3. All soil boring, soil vapor sampling, soil sampling, and sub-slab vapor sampling locations are shown on Figure 1. Implementation and results of the soil, soil vapor, and sub-slab vapor sampling for both the initial scope of work and the additional scope of work are reported herein.

FIELD IMPLEMENTATION

Geosyntec completed the initial soil vapor probe installation on 27 May 2021 and screening and sampling activities on 28 May 2021 and 1 June 2021, respectively. Additional screening activities were conducted on 25 June 2021. The soil sampling, sub-slab vapor sampling, and installation of two additional soil vapor probe were completed on 2 July 2021. Sampling of the two additional soil vapor probes was conducted on 7 July 2021. Prior to Limited ESA drilling work, Geosyntec

notified USA/Digalert on 21 May 2021 and 29 June 2021 (Ticket Number B211440710 and subsequent updated Ticket Number B21180077, respectively). Prior to the subsurface work, GPRS Inc of Seal Beach, California was subcontracted by Geosyntec to identify potential utilities or other subsurface obstructions at or near planned sampling locations for both initial and additional assessment activities.

Soil Vapor Sampling

On 27 May 2021, Geosyntec's drilling subcontractor JHA Drilling of Irvine, California installed six triple nested probes (SVP-1 through SVP-6) at 5 feet below ground surface (ft bgs), 10 ft bgs, and 20 ft bgs. Boreholes were advanced with a direct push drilling rig.

The soil vapor probes were constructed using new ¼ inch Nylaflow® tubing and a stainless-steel implant at each location. Probes were constructed in general accordance with the City of Brea Combustible Soil-Gas Guideline (Updated 5/2020). Each probe was set in 3 to 5 feet of coarse sand, depending on the depth of the probe. Approximately 3 to 4 feet of hydrated bentonite was then placed above the sand pack, between probes. Each boring was finished with approximately 2 feet of hydrated bentonite to the surface.

The soil vapor probes were fitted with plastic valves at the ground surface to maintain an air-tight seal. Following installation, soil vapor probes were allowed to equilibrate for a minimum of two hours prior to initiating purging and sampling activities.

On 27 May 2021, following an equilibration period of at least 2 hours for each probe, approximately 1 liter (L) of vapor was purged and screened for the presence of volatile organic compounds (VOCs) using a photoionization detector (PID), and carbon dioxide, methane, oxygen, and hydrogen sulfide using a GEM landfill multi-gas meter.

On 1 June 2021, soil vapor probe samples from 5 feet bgs at SVP-2, SVP-3, SVP-4, SVP-5, and SVP-6 were screened, purged, and collected in batch-certified-clean 1-L Summa® canisters equipped with 200 milliliters per minute (mL/min) flow controllers following the aforementioned methodology. On 1 June 2021, the canisters were transported under standard chain-of-custody (COC) protocol to Enthalpy Analytical Laboratory in Orange, California for VOC analysis by USEPA Method TO-15 and fixed gases analysis by ASTM D1946.

On 2 July 2021, Geosyntec's drilling subcontractor JHA Drilling of Irvine, California advanced seven boreholes to 10 ft bgs. Soil was screened every 2 feet with a PID. A soil vapor probe was installed at 5 ft bgs in two of the boreholes (SVP-3E and SVP-7) using the methods described above. These boreholes and interval were chosen based on either low-level field screening results (SVP-3E) or the proximity of the borehole to the abandoned clarifier (SVP-7).

On 7 July 2021, the two additional soil vapor probes (SVP-3E and SVP-7) were screened, purged, and sampled in batch-certified-clean 1-L Summa® canisters equipped with 200 mL/min flow

controllers. The canisters were transported under COC protocol to Enthalpy Analytical Laboratory in Orange, California for VOC analysis by USEPA Method TO-15 and fixed gases analysis by ASTM D1946.

Field logs for the vapor probe purging, screening, and sampling are provided in Attachment A and analytical results are presented in Table 1.

Sub-Slab Vapor Sampling

On 2 July 2021, Geosyntec installed and sampled three sub-slab vapor probes (pins [SSV-1, SSV-2, and SSV-3]) using a rotary hammer drill. The pins were installed into the concrete slab within the interior of the building; the slab was observed to be approximately 6 inches thick. Upon completion of drilling, the pins were installed with an air-tight seal into the drilled hole and allowed to equilibrate for a minimum of 2 hours prior to purging, screening, and sampling.

A shut-in test was completed to confirm that the flow controller and Summa Canister™ (Summa) fittings in the sampling train were air-tight prior to purging and sampling. Geosyntec purged approximately 1 L of vapor which was screened for the presence of helium using a helium detector, VOCs using a PID, and carbon dioxide, methane, oxygen, and hydrogen sulfide using a GEM landfill gas meter. Helium was used during sampling as a leak check for indoor air being introduced into the sample.

Sub-slab vapor samples were collected in pre-evacuated, batch certified-clean 1-L Summa® canisters equipped with 200 mL/min flow controllers (e.g., 5 minute). After collection, the canisters were transported under standard COC protocol to Enthalpy Analytical Laboratory of Orange, California for VOC analysis by USEPA Method TO-15, TPH analysis by USEPA Method TO-3M, and fixed gases analysis by ASTM D1946.

After sampling was completed, the sub-slab vapor probes were removed, and the holes were backfilled with liquid cement until flush with the surface of the slab. Sub-slab vapor sampling field forms are provided in Attachment A and analytical results are provided in Table 2.

Soil Sampling

Soil samples were collected on 2 July 2021 as part of the additional scope of work. Soil samples were collected from two of the seven boreholes based on the results of the PID screening during drilling. Samples were collected at 5 ft bgs and 10 ft bgs from borehole SB-1 (in the vicinity of the abandoned underground storage tank) and at 5 ft bgs from borehole SVP-3A. On 2 July 2021 soil samples were transported under COC protocol to Enthalpy Analytical Laboratory in Orange, California for analysis. Soil was collected in jars for total petroleum hydrocarbons (TPH) analysis by USEPA Method 8015B, Title 22 Metals analysis by USEPA Methods 6010B and 7471A, and cyanide analysis by USEPA Method 9012A. Soil was also collected with Terra Core® samplers

and field-preserved for VOC analysis by USEPA Method 8260B. Analytical results are provided in Table 3.

Soil Vapor Field Screening

Following installation and sampling of the soil vapor probes Geosyntec purged approximately 1 liter of vapor from each probe and screened each probe for the presence of VOCs using a PID, and carbon dioxide, methane, oxygen, and hydrogen sulfide using a GEM landfill multi-gas meter. Methane screening was conducted on 27 and 28 May 2021, prior to soil vapor sampling on 1 June 2021, and re-screened on 25 June 2021. Results of the field screening are presented on Table 4.

RESULTS

Analytical results of the subsurface soil vapor samples, the sub-slab vapor samples, and the soil samples are summarized in Table 1, Table 2, and Table 3, respectively. Field screening results are summarized in Table 4. Laboratory analytical reports are provided in Attachment B. Analytical results were compared to the California Department of Toxic Substances Control Note 3 Screening Levels¹ (CA DTSC- SLs) and USEPA Regional Screening Levels (RSLs) for Commercial settings². Soil vapor detections are summarized by the following:

Soil Vapor Results

1 June 2021 Sampling

- Benzene was detected at a concentration above the Commercial SL (14 micrograms per meter cubed [$\mu\text{g}/\text{m}^3$]) at one soil vapor sampling location at a concentration of $31 \mu\text{g}/\text{m}^3$ (SVP-4-5).
- Various other compounds were detected in soil vapor; however, none of the detected concentrations exceeded SLs.
- Methane was detected in SVP-3 below the 5% Lower Explosive Limit (LEL) at a concentration of 0.66 percent by volume (%vol). Methane was not detected by laboratory analysis in any other samples.
- During screening and sampling, the probes at SVP-1 at all depths were filled with moisture and were unable to be screened/sampled.
- It should be noted that due to high levels of TPH-diesel, samples collected from SVP-3-5 were diluted multiple times and as a result, reporting limits for multiple constituents

¹ California Human Health Risk Assessment Note 3 (HHRA), 2020. DTSC-Modified Screening Levels for Soil provided by the Department of Toxic Substances Control (DTSC) for commercial/industrial land uses. June 2020.

² United States Environmental Protection Agency (EPA), 2020. Regional Screening Levels (RSLs), Region 9 May 2020 PNR0651JW2/655B Brea, CA

exceeded the commercial screening level. Soil vapor probe SVP-3E was constructed and sampled on 2 and 7 July 2021, respectively, in response to these elevated reporting limits.

7 July 2021 Sampling

- Chloroform was detected at a concentration above the Commercial SL ($18 \mu\text{g}/\text{m}^3$) at two soil vapor sampling locations at concentrations of $20 \mu\text{g}/\text{m}^3$ (SVP-3E) and $30 \mu\text{g}/\text{m}^3$ (SVP-7).

Sub-Slab Vapor Results

- Various compounds were detected; however, none of the detected concentrations exceeded SLs.

Soil Results

- Arsenic was detected above the Commercial SL (0.36 milligrams per kilogram [mg/kg]) in each sample at concentrations ranging from 2.2 mg/kg (SVP-3A-5) to 4.2 mg/kg (SB-1-5).
- The background level for arsenic in California is 12 mg/kg, indicating that these detections are within background levels for metals in soil³.
- Various other compounds were detected; however, none of the detected concentrations exceeded SLs.

Soil Vapor Field Screening

Measured detections of methane, VOCs, and hydrogen sulfide collected during field screening of the probes are summarized as follows:

Initial Screening (27 May 2021)

- Methane was detected at a maximum concentration of 0.1 %vol (SVP-3-10).
- VOCs were detected at a range of 0.2 parts per million (ppm) (SVP-5-10) to 295.3 ppm (SVP-3-5).
- Hydrogen Sulfide was detected at a range of 2 ppm (SVP-5-20, SVP-6-5) to 4 ppm (SVP-5-10).

³ California Department of Toxic Substances Control, 2008. Determination of a Southern California Regional Background Arsenic Concentration in Soil.
PNR0651JW2/655B Brea, CA

- During screening of the probes, the GEM landfill multi-gas meter recorded maximum concentration of carbon monoxide (9,500 ppm). It is possible that this could lead to erroneous readings of the other constituents analyzed by the GEM landfill multi-gas meter.

Secondary Screening (28 May 2021)

- Methane was detected at a range of 10% of the LEL (SVP-4-5) to >99% LEL (SVP-3-5).
- VOCs were detected at a range of 0.6 ppm (SVP-5-20) to 342.1 ppm (SVP-3-5).
- Hydrogen Sulfide was detected at a range of 0.8 ppm (SVP-2-5) to 71.5 (SVP-3-5).
- During screening on 28 May 2021, field screening data was collected using a 4-gas meter. As a result, methane results provided in percent of the LEL.

Third Screening (1 June 2021)

- Methane was detected at a 0.1 %vol (SVP-3-5).
- VOCs were detected at a range of 0.5 ppm (SVP-4-10) to 206.0 ppm (SVP-3-5).
- Hydrogen Sulfide was detected at a range of 1 ppm (SVP-5-10, SVP-5-20) to 4 ppm (SVP-3-5).

Fourth Screening (25 June 2021)

- Methane was detected at a concentration of 2.3 %vol (SVP-3-5).
- VOCs were detected at a range of 0.7 ppm (SVP-5-5) to 3.1 ppm (SVP-6-20).
- Hydrogen Sulfide was not detected.

CONCLUSIONS

Initial Limited ESA and Additional Limited ESA sampling was completed by Geosyntec personnel to support environmental due diligence activities at the Site. Six triple-nested soil vapor probes were installed at depths 5 ft bgs, 10 ft bgs, and 20 ft bgs. An additional seven boreholes were advanced; soil vapor-probes were installed at a depth of 5 ft bgs in two of the boreholes and a total of three soil samples were collected from two of the boreholes. Soil vapor samples were collected at a depth of 5 ft bgs from five of the six original probes and the two additional probes. Three sub-slab vapor pins were installed within the building and sampled. Analytical results were compared to the lower of the California DTSC-SLs and the USEPA RSLs.

Benzene was detected at a concentration above the Commercial SL at one soil vapor sampling
PNR0651JW2/655B Brea, CA

location ($31 \mu\text{g}/\text{m}^3$) at SVP-4-5. Chloroform was detected at a concentration above the Commercial SL at two soil vapor sampling locations ($20 \mu\text{g}/\text{m}^3$ at SVP-3E and $30 \mu\text{g}/\text{m}^3$ at SVP-7). Remaining constituent concentrations of VOCs in the soil vapor and sub-slab vapor samples were below Commercial SLs.

Arsenic was detected at a concentration above the Commercial SL in the three soil samples at concentrations of 2.2 mg/kg (SVP-3A-5) to 4.2 mg/kg (SB-1-5); however, concentrations were below documented background concentrations for California. Remaining constituent concentrations of metals and TPH were below Commercial SLs. Mercury, cyanide, and VOCs were not detected above the laboratory reporting limits in the three soil samples.

Screening for methane detected concentrations of greater than 99% of the LEL in SVP-3-5 as well as at 2.3%vol in SVP-3-5. Laboratory analysis of the sample collected from SVP-3-5 detected methane at a concentration of 0.66%. Methane was not detected by laboratory analysis in any other samples.

All probes were left in place and finished with a permanent well box in the event additional sampling is required.

CLOSURE

We appreciate the opportunity to support this project. Please do not hesitate to contact the undersigned should you have questions.

Notes:

Soil vapor samples were collected on 01 June 2021 and analyzed for Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) Method TO-15. Soil vapor samples SVP-3E and SVP-7 were collected on and 07 July 2021 and analyzed for VOCs by Method TO-15, Methane and Nitrogen by Method ASTM D1946, and TPH-Gasoline by Method TO-3.

Only compounds detected at least once in air samples are shown.

1. VOC values reflect the most recent screening levels for indoor air quality, based on a 1 x 10⁻⁶ carcinogenic risk standard (the non-cancer endpoint is reported where a cancer endpoint has not been established) with a hazard quotient (HQ) of 1, divided by the default subsurface to indoor air attenuation factor of 0.03 (Technical Guide for Assessing and Mitigating the Vapor Intrusion Pathway from Subsurface Vapor Sources to Indoor Air, EPA, June 2015). The source of the indoor air screening levels is the California Department of Toxic Substance Control Note 3 Screening Levels (CA DTSC-SLs; Cancer or Non-Cancer Endpoint, June 2020) and/or the EPA Regional Screening Levels (RSLs; May 2021), whichever is most conservative. Screening level values for indoor air are shown as published and may have varying amounts of significant figures. Soil vapor screening level values have been limited to two significant figures unless the calculated screening level has greater than two significant figures that are not decimals (e.g. total xylenes: 3,33µg/m³).

2. Samples were collected at 5 feet below ground surface. SVP-1 was unable to be sampled due to moisture in the probe and is not shown on this table as a result.

Notes:

Soil samples were collected on 2 July 2021 and analyzed for volatile organic compounds (VOCs) by Environmental Protection Agency (EPA) Method 8260B, total petroleum hydrocarbons (TPH) by EPA Method 8015B, metals by EPA Method 6010B/7471A, and cyanide by EPA Method 9012A.

Only compounds detected in soil samples are shown.

There are not detectable concentrations of VOCs by EPA Method 8260B, cyanide by EPA Method 9012A, and Mercury by EPA Method 7471A.

Detected concentrations are in **bold**.

Soil samples were collected at 5 feet below ground surface at SVP-3A-5 and at 5 and 10 feet below ground surface at SB-1.

^a Values are the lower of the California Department of Toxic Substance Control Note 3 Screening Levels (CA DTSC-SLs; Cancer or Non-Cancer Endpoint), June 2020, or EPA Regional Screening Levels (RSLs), May 2020, for soil.

^b Laboratory analytical report incorrectly identified this sample as SUP-3A-5.
mg/kg = milligrams per kilogram

"<" = Not detected above the laboratory reporting limit shown

3.4 Detected concentration is greater than the commercial screening level.

Notes:
 All probe depths for SVP-1 through SVP-6 were screened for fixed gases following installation (Initial), at least 24 hours after installation (Second), prior to sampling (Third), and approximately three weeks following sampling (Fourth).
 Probes were screened at 5 and 10 ft bgs, with terminal depths set at a maximum depth of 20 ft bgs or refusal.
 Only compounds detected at least once in samples are shown.
 NR - No Reading due to malfunctioning equipment.
 -- = Probe unable to be screened due to moisture (M), no flow (F), or hydrogen sulfide/VOC interference (I).
 a) The lower explosive limit (LEL) for methane is 5%. 100% of the LEL means 5% methane has been detected and the LEL has been reached.
 b) The LEL for hydrogen sulfide is 4% or 4,000 parts per million (ppm).
 c) On May 28, field screening data was collected using a 4-gas meter. As a result, methane results provided in LEL%. Values shown as >[number] indicate the maximum reading for the instrument was exceeded.
 ft bgs = feet below ground surface
 in. H2O = inches of water
 %vol = percent by volume
 ppmv = parts per million by volume as measured by a photoionization detector (PID) with 100 ppm isobutylene.
 VOCs = Volatile Organic Compounds
 Detected concentrations are in **bold**.

50 Detected concentration is greater than the LEL.

 Field Personnel: B. Thelen
 Recorded By: B. Thelen

Probe No.: SVP-6-10 Sub-slab probe Soil vapor probe
 MinRad 3000 or RRI GX-6000/GX-2012 Serial No.: FA03224 Lamp: 10.6 / 11.7 eV
 Landtech GEM 5000 Plus (or Similar) Landfill Gas Meter Serial No.: 44045377 FA02258
 MDG 2002 Helium detector Serial No.: _____
 Leak Detection Method: Helium Water Dam Other N/A
 Approximate Building Square Footage: No Building

2. Surface Type: Asphalt Concrete Grass Other _____
 Surface Thickness: 3 inches/centimeters Unknown
 Slab Condition: Good
 Vapor Barrier Present?: Yes No Unknown

3. Probe construction details:
 Probe type (i.e. VaporPin®, Stainless Steel Implant, Threaded Brass Sub-slab Probe, etc.): 4" Stainless Steel Implant
 Tubing type (Nylaflo®, Teflon, or Teflon-lined tubing): 1/4" Nylaflo
 Probe diameter: 7/16 inch Tubing diameter: 1/4 inch Borehole diameter: 2.25 inch
 Drilling Method (i.e. Direct Push, Hammer Drill, Hand Auger, etc.): Direct Push
 Borehole Depth (ft bgs): 20 Sand Pack Interval (ft bgs): 5-10
 Date Installed: 5/27/21 Time Installed: 1514

5. Initial Probe Pressure (Prior to Purging) (readings should be to 0.000 in-W.C.):
 Positive Negative/Vacuum
 Gauge Reading _____ Units: _____ Gauge or Meter Used: _____

6. Field tubing blank reading (ppm): FID Reading 0.0 ppm,

7. Shut in test prior to purging completed? Yes No

4. Casing Volume: Sub-slab probe <0.1 L Soil vapor probe 1.6 L (Calculate volume for soil vapor probe)

8. Purging - Probes should be purged a minimum of 3 pore volumes prior to sample collection.
 *If methane is detected during purging of greater than 0.1% (2% of LEL) but less than 30%, notify PM and re-sample all probes 24-hours later.

Date	Start Time	End Time	Elapsed Time (min.)	Bag Volume (L)	Purge Rate (LPM)	Cumulative Volume (L)	CH ₄ * (%v)	CO ₂ (%v)	O ₂ (%v)	H ₂ S (ppmv)	Helium		VOCs by PID (ppmv)

9. Calculate 5% of the minimum helium concentration in the shroud: 15,000 ppmv.
 Note: 1% helium = 10,000 ppmv.
 Confirm that helium in field screened samples is less than 5% of the minimum helium concentration in the shroud prior to sampling. Confirmed Not Confirmed
 Note: if not confirmed, troubleshoot leak prior to sample collection and document in comments below

10. Shut in test prior to sample collection completed? Yes No

11. Sample Collection

Date	Time	Sample ID	Summa Canister ID	Flow Controller #	Vacuum Gauge #	Initial Vacuum (in. Hg)	Final Vacuum (in. Hg)
6/1/12	1032	SVP-3-5	C10699	A10165	N/A	-29	-14

Analysis/Method Requested on COC: VOCs by EPA method TO-15, exclude Naphthalene and Methane by ASTM 1946 or EPA Method 3C

Comments: Well head vac is ~ 90" H₂O during purge #1 and there was not enough sample in Tedlar to screen with CRM & multimeter. Pulled sample for ~ 14 minutes and summa only reached -14" Hg. Probe appears to be plugged.

Brian Rockwell

Lab Job Number: 446010

Location: Hazel PNR0651KW2-655B

Date Received: 06/01/21

This data package contains sample and QC results for five air samples, requested for the above referenced project on 06/01/21. The samples were received cold and intact.

Volatile Organics in Air by MS (EPA TO-15):

High RPD was observed for methylene chloride in the QC sample duplicate (SDUP) of SVP-5-5 (lab # 446010-004). SVP-2-5 (lab # 446010-001), SVP-3-5 (lab # 446010-002), and SVP-5-5 (lab # 446010-004) were diluted due to high hydrocarbons. Please note that Methylene chloride is a common laboratory solvent and that low-level detections in samples may be due to laboratory exposure. No other analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946):

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1
 Client: Geosyntec Consultant Project: Hazel
 Date Received: 6/1/21 Sampler's Name Present: Yes No

Section 2
 Sample(s) received in a cooler? Yes, How many? _____ No (skip section 2) Sample Temp (°C) ^{ambient}
 (No Cooler) : _____
 Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____
(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)
 Shipping Information: _____

Section 3
 Was the cooler packed with: Ice Ice Packs Bubble Wrap Styrofoam
 Paper None Other _____
 Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6
 For discrepancies, how was the Project Manager notified? Verbal PM Initials: _____ Date/Time _____
 Email (email sent to/on): _____ / _____
 Project Manager's response:

Completed By:  Date: 6/1/21

Date Received: 07/02/21

This data package contains sample and QC results for three air samples, requested for the above referenced project on 07/02/21. The samples were received intact.

Volatile Organics in Air by MS (EPA TO-15):

No analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946):

No analytical problems were encountered.

Volatile Organics in Air GC - TO3 (EPA TO-3M):

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1
 Client: Geosyntec Consultants Project: Hazel/Brea
 Date Received: 07/02/21 Sampler's Name Present: Yes No

Section 2
 Sample(s) received in a cooler? Yes, How many? _____ No (skip section 2) Sample Temp (°C) (No Cooler) : 21.5
 Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____
 (Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)
 Shipping Information: _____

Section 3
 Was the cooler packed with: Ice Ice Packs Bubble Wrap Styrofoam
 Paper None Other _____
 Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments
 Client did not receive a pressure gauge, so there is no initial or final pressure on the COC.

Section 6
 For discrepancies, how was the Project Manager notified? Verbal PM Initials: _____ Date/Time _____
 Email (email sent to/on): PAM /07/2/21
 Project Manager's response: _____

Completed By: Seena Sylvester Date: 07/02/21

Date Received: 07/02/21

This data package contains sample and QC results for three soil samples, requested for the above referenced project on 07/02/21. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B):

Low recovery was observed for diesel C10-C28 in the MSD for batch 269913; the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and the low recovery was not associated with any reported results. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

Low recoveries were observed for chromium, nickel, and zinc in the MS/MSD for batch 269966; the parent sample was not a project sample, and the LCS was within limits. High recoveries were also observed for chromium, nickel, and zinc; the LCS was within limits. High RPD was observed for chromium and zinc. No other analytical problems were encountered.

Cyanide - Semi-Automated Method (EPA 9012A):

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1
 Client: Geosyntec Consultants Project: Hazel/Brea
 Date Received: 07/02/21 Sampler's Name Present: Yes No

Section 2
 Sample(s) received in a cooler? Yes, How many? _____ No (skip section 2) Sample Temp (°C) (No Cooler) : 21.5
 Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____
(Acceptance range is < 6°C but not frozen [for Microbiology samples, acceptance range is < 10°C but not frozen]. It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)
 Shipping Information: _____

Section 3
 Was the cooler packed with: Ice Ice Packs Bubble Wrap Styrofoam
 Paper None Other _____
 Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6
 For discrepancies, how was the Project Manager notified? Verbal PM Initials: _____ Date/Time _____
 Email (email sent to/on): _____ / _____
 Project Manager's response:

Completed By: _____ Date: _____

Case Narrative

GeoSyntec Consultants
211 East Ocean Blvd, Suite 300
Long Beach, CA 90802
Paige Farrell

Lab Job Number: 447640
Location: Brea DJT4
Date Received: 07/07/21

This data package contains sample and QC results for two air samples, requested for the above referenced project on 07/07/21. The samples were received cold and intact.

Volatile Organics in Air by MS (EPA TO-15):

No analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946):

No analytical problems were encountered.

Volatile Organics in Air GC - TO3 (EPA TO-3M):

No analytical problems were encountered.

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1
 Client: GEOSYNTEC CONSULTANTS Project: BREA DJTY
 Date Received: 7/7/21 Sampler's Name Present: Yes No

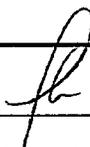

Section 2
 Sample(s) received in a cooler? Yes, How many? _____ No (skip section 2) Sample Temp (°C) (No Cooler): AMBIENT
 Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____
(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)
 Shipping Information: _____

Section 3
 Was the cooler packed with: Ice Ice Packs Bubble Wrap Styrofoam
 Paper None Other _____
 Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	/		
Are sample IDs present?	/		
Are sampling dates & times present?	/		
Is a relinquished signature present?	/		
Are the tests required clearly indicated on the COC?	/		
Are custody seals present?		/	
If custody seals are present, were they intact?			/
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			/
Did all samples arrive intact? If no, indicate in Section 4 below.	/		
Did all bottle labels agree with COC? (ID, dates and times)	/		
Were the samples collected in the correct containers for the required tests?	/		
Are the containers labeled with the correct preservatives?			/
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			/
Was a sufficient amount of sample submitted for the requested tests?	/		

Section 5 Explanations/Comments

Section 6
 For discrepancies, how was the Project Manager notified? Verbal PM Initials: _____ Date/Time _____
 Email (email sent to/on): _____ / _____
 Project Manager's response:

Completed By:  Date: 7/7/21

**APPENDIX D.3:
PHASE II ENVIRONMENTAL SITE
ASSESSMENT LETTER REPORT**

This page intentionally left blank.

18 July 2024

Ms. Tracey Schwartz
Amazon.com Services LLC
300 Boren Ave N
Seattle, Washington

**Subject: Phase II Environmental Site Assessment Letter Report
Amazon Site Code: DJT4
275 Valencia Avenue, Brea, California**

Dear Ms. Schwartz,

Geosyntec Consultants, Inc. (Geosyntec) is pleased to submit this Phase II Environmental Site Assessment (ESA) Letter Report documenting environmental due diligence (EDD) activities performed by Geosyntec to date at the property located at 275 Valencia Avenue, Brea, California (the “Site”).

BACKGROUND

The Site is an approximately 31.8-acre property located at 275 Valencia Avenue, Brea, California (**Figure 1**) that currently consists of two Bank of America buildings (service and operations buildings) that measure approximately 673,500 square feet combined. Former uses of the Site include vacant or undeveloped land until the construction of the current commercial buildings in 1981 and 1983. Former tenants of the Site include a Security Pacific bank and data processing center/microfiche operations. Current uses of the vicinity include recreational areas, residential, commercial buildings, and an inactive oil field. Historical uses of the Site vicinity included an active oil field and undeveloped land.

Geosyntec prepared a Phase I ESA in June 2021¹ which identified one Recognized Environmental Condition (REC), one Historical REC (HREC), and two *de minimis* conditions. The REC consisted of an abandoned 4,000-gallon tank which was installed on-site to act as secondary containment in case of a release from a former power transformer. Southern California Edison (SCE) reportedly owned the transformer and was responsible for any releases. The UST was reportedly never used and was abandoned in place in 1999; however, no subsurface sampling was conducted around the UST or former transformer prior to or after abandonment.

The HREC consisted of an on-site abandoned clarifier previously used for the management of a liquid waste stream and two former 48,000-gallon diesel USTs used to fuel on-site backup generators. A 47-gallon release was reported from one of the 48,000-gallon USTs in 1995, and both 48,000-gallon

¹ Geosyntec Consultants, Inc., 2021. *Phase I Environmental Site Assessment 275 Valencia Avenue, Brea, California*. June 14.

USTs were removed later that year. Soil investigations and remedial actions were implemented to address residual hydrocarbon impacts to the soil. During these investigations, total petroleum hydrocarbon (TPH) impacts to soil were encountered that were previously unknown and reportedly unrelated to the identified release, indicating other unknown releases could have also occurred elsewhere. Soil was reportedly excavated upon the identification of additional contamination. Subsurface sampling near the clarifier in 1994 did not report significant levels of volatile organic compounds (VOCs) or metals in soil or groundwater. The clarifier was abandoned in place. A no further action (NFA) determination was issued for the property in 1995 by County of Orange Health Care Agency in association with the UST release. The two *de minimis* conditions consisted of surface staining, likely from hydraulic fluid, in the elevator equipment room and inability to observe/access and lack of documentation related to the SCE transformer room.

OBJECTIVES AND SCOPE OF WORK

The investigation activities at the Site resulted in two mobilizations: the “Initial” Limited ESA completed in May and June 2021 and the “Additional” Limited ESA completed in July 2021. The Initial Limited ESA and Additional Limited ESA scopes of work reported herein were developed to assess subsurface conditions and potential vapor intrusion and methane risk associated within the Site.

To meet the above objective, the Initial Limited ESA scope of work included installation and sampling of six triple-nested soil vapor probes in the exterior areas of the Site and in general accordance with the City of Brea Combustible Soil-Gas Guideline (Updated 5/2020). Based on the results of the Initial Limited ESA, an additional scope of work was developed. This included advancement of seven borings, installation and sampling of two soil vapor probes and three sub-slab vapor probes. Two soil samples were also collected as part of the additional scope of work to assess for potential subsurface impacts in the vicinity of: (i) a reportedly abandoned on-Site UST; and (ii) soil vapor probe SVP-3. Soil boring, soil vapor sampling, soil sampling, and sub-slab vapor sampling locations are shown on **Figure 2**. Implementation and results of the soil, soil vapor, and sub-slab vapor sampling for both the initial scope of work and the additional scope of work are reported herein.

FIELD IMPLEMENTATION

Geosyntec completed the initial soil vapor probe installation on 27 May 2021 and screening and sampling activities on 28 May 2021 and 1 June 2021, respectively. Additional screening activities were conducted on 25 June 2021. The soil sampling, sub-slab vapor sampling, and installation of two additional soil vapor probes were completed on 2 July 2021. Sampling of the two additional soil vapor probes was conducted on 7 July 2021. Prior to Limited ESA drilling work, Geosyntec notified USA/Digalert on 21 May 2021 and 29 June 2021 (Ticket Number B211440710 and subsequent updated Ticket Number B21180077, respectively). Prior to the subsurface work, GPRS Inc of Seal Beach, California was subcontracted by Geosyntec to identify potential utilities or other subsurface

obstructions at or near planned sampling locations for both initial and additional assessment activities.

Soil Vapor Sampling

On 27 May 2021, Geosyntec's drilling subcontractor JHA Drilling of Irvine, California installed six triple nested probes (SVP-1 through SVP-6) at 5 feet below ground surface (ft bgs), 10 ft bgs, and 20 ft bgs. Boreholes were advanced with a direct push drilling rig.

The soil vapor probes were constructed using new ¼ inch Nylaflow® tubing and a stainless-steel implant at each location. Probes were constructed in general accordance with the City of Brea Combustible Soil-Gas Guideline (Updated 5/2020). Each probe was set in 3 to 5 feet of coarse sand, depending on the depth of the probe. Approximately 3 to 4 feet of hydrated bentonite was then placed above the sand pack, between probes. Each boring was finished with approximately 2 feet of hydrated bentonite to the surface.

The soil vapor probes were fitted with plastic valves at the ground surface to maintain an air-tight seal. Following installation, soil vapor probes were allowed to equilibrate for a minimum of two hours prior to initiating purging and sampling activities.

On 27 May 2021, following an equilibration period of at least 2 hours for each probe, approximately 1 liter (L) of vapor was purged and screened for the presence of VOCs using a photoionization detector (PID), and carbon dioxide, methane, oxygen, and hydrogen sulfide using a GEM 5000 landfill multi-gas meter.

On 1 June 2021, soil vapor probe samples from 5 feet bgs at SVP-2, SVP-3, SVP-4, SVP-5, and SVP-6 were screened, purged, and collected in batch-certified-clean 1-L Summa® canisters equipped with 200 milliliters per minute (mL/min) flow controllers following the aforementioned methodology. On 1 June 2021, the canisters were transported under standard chain-of-custody (COC) protocol to Enthalpy Analytical Laboratory in Orange, California for VOC analysis by USEPA Method TO-15 and fixed gases analysis by ASTM D1946.

On 2 July 2021, Geosyntec's drilling subcontractor JHA Drilling advanced seven boreholes to 10 ft bgs (SB-1, SVP-3A, SVP-3B, SVP-3C, SVP-3D, SVP-3E, and SVP-7). Soil was screened every 2 feet with a PID. A soil vapor probe was installed at 5 ft bgs in two of the boreholes (SVP-3E and SVP-7) using the methods described above. These boreholes and interval were chosen based on either field screening results (SVP-3E) or the proximity of the borehole to the abandoned clarifier (SVP-7).

On 7 July 2021, the two additional soil vapor probes (SVP-3E and SVP-7) were screened, purged, and sampled in batch-certified-clean 1-L Summa® canisters equipped with 200 mL/min flow controllers. The canisters were transported under COC protocol to Enthalpy Analytical Laboratory

for VOC analysis by USEPA Method TO-15 and fixed gases analysis by ASTM D1946.

Field logs for the vapor probe purging, screening, and sampling are provided in **Attachment A** and analytical results are presented in **Table 1**.

Sub-Slab Vapor Sampling

On 2 July 2021, Geosyntec installed and sampled three sub-slab vapor probes (pins [SSV-1, SSV-2, and SSV-3]) using a rotary hammer drill. The pins were installed into the concrete slab within the interior of the building; the slab was observed to be approximately 6 inches thick. Upon completion of drilling, the pins were installed with an air-tight seal into the drilled hole and allowed to equilibrate for a minimum of 2 hours prior to purging, screening, and sampling.

A shut-in test was completed to confirm that the flow controller and Summa[®] canister fittings in the sampling train were air-tight prior to purging and sampling. Geosyntec purged approximately 1 L of vapor which was screened for the presence of helium using a helium detector, VOCs using a PID, and carbon dioxide, methane, oxygen, and hydrogen sulfide using a GEM landfill gas meter. Helium was used during sampling as a leak check for indoor air being introduced into the sample.

Sub-slab vapor samples were collected in pre-evacuated, batch certified-clean 1-L Summa[®] canisters equipped with 200 mL/min flow controllers (e.g., 5 minute). After collection, the canisters were transported under standard COC protocol to Enthalpy Analytical Laboratory for VOC analysis by USEPA Method TO-15, TPH analysis by USEPA Method TO-3M, and fixed gases analysis by ASTM D1946.

After sampling was completed, the sub-slab vapor probes were removed, and the holes were backfilled with liquid cement until flush with the surface of the slab. Sub-slab vapor sampling field forms are provided in **Attachment A** and analytical results are provided in **Table 2**.

Soil Sampling

Soil samples were collected on 2 July 2021 as part of the additional scope of work. Soil samples were collected from two of the seven boreholes based on the results of the PID screening during drilling. Samples were collected at 5 ft bgs and 10 ft bgs from borehole SB-1 (in the vicinity of the abandoned UST) and at 5 ft bgs from borehole SVP-3A. On 2 July 2021 soil samples were transported under COC protocol to Enthalpy Analytical Laboratory for analysis. Soil was collected in jars for TPH analysis by USEPA Method 8015B, Title 22 Metals analysis by USEPA Methods 6010B and 7471A, and cyanide analysis by USEPA Method 9012A. Soil was also collected with Terra Core[®] samplers and field-preserved for VOC analysis by USEPA Method 8260B. Analytical results are provided in **Table 3**.

Soil Vapor Field Screening

Following installation and sampling of the soil vapor probes Geosyntec purged approximately 1 liter of vapor from each probe and screened each probe for the presence of VOCs using a PID, and carbon dioxide, methane, oxygen, and hydrogen sulfide using a GEM 5000 landfill multi-gas meter. Methane screening was conducted on 27 and 28 May 2021, prior to soil vapor sampling on 1 June 2021, and re-screened on 25 June 2021. Results of the field screening are presented on **Table 4**.

RESULTS

Analytical results of the subsurface soil vapor samples, the sub-slab vapor samples, and the soil samples are summarized in **Table 1**, **Table 2**, and **Table 3**, respectively. Field screening results are summarized in **Table 4**. Laboratory analytical reports are provided in **Attachment B**. Analytical results were compared to the California Department of Toxic Substances Control Note 3 Screening Levels² (CA DTSC- SLs) and USEPA Regional Screening Levels (RSLs) for Commercial settings³. Sampling and screening results are summarized below and compared to the lower level of the above referenced Commercial Screening Level (SLs).

Soil Vapor Laboratory Results

1 June 2021 Sampling

- Benzene was detected at a concentration above the Commercial SL (14 micrograms per meter cubed [$\mu\text{g}/\text{m}^3$]) at one soil vapor sampling location at a concentration of 31 $\mu\text{g}/\text{m}^3$ (SVP-4-5).
- Various other compounds were detected in soil vapor; however, none of the detected concentrations exceeded Commercial SLs.
- Methane was detected in SVP-3 at a concentration of 0.66 percent by volume (%vol). Methane was not detected by laboratory analysis in any other samples.
- During screening and sampling, the probes at SVP-1 at all depths were filled with moisture and were unable to be screened/sampled.
- It should be noted that due to high levels of TPH-diesel, samples collected from SVP-3-5 were diluted multiple times and as a result, reporting limits for multiple constituents exceeded the Commercial SL. Soil vapor probe SVP-3E was constructed and sampled on 2 and 7 July 2021, respectively, in response to these elevated reporting limits.

² California Human Health Risk Assessment Note 3 (HHRA), 2020. DTSC-Modified Screening Levels for Soil provided by the Department of Toxic Substances Control (DTSC) for commercial/industrial land uses. June 2020.

³ United States Environmental Protection Agency (EPA), 2020. Regional Screening Levels (RSLs), Region 9 May 2020

7 July 2021 Sampling

- Chloroform was detected at a concentration above the Commercial SL ($18 \mu\text{g}/\text{m}^3$) at two soil vapor sampling locations at concentrations of $20 \mu\text{g}/\text{m}^3$ (SVP-3E) and $30 \mu\text{g}/\text{m}^3$ (SVP-7).
- Various other compounds were detected; however, none of the detected concentrations exceeded Commercial SLs.
- Methane was not detected in samples submitted for laboratory analysis.

Sub-Slab Vapor Laboratory Results

- Various compounds were detected; however, none of the detected concentrations exceeded Commercial SLs.

Soil Results

- Arsenic was detected above the Commercial SL (0.36 milligrams per kilogram [mg/kg]) in each sample at concentrations ranging from 2.2 mg/kg (SVP-3A-5) to 4.2 mg/kg (SB-1-5). The background level for arsenic in California is 12 mg/kg, indicating that these detections are within background levels for metals in soil⁴.
- Various other compounds were detected; however, none of the detected concentrations exceeded Commercial SLs.

Soil Vapor Field Screening

Measured detections of methane, VOCs, and hydrogen sulfide collected during field screening of the probes are summarized as follows:

Initial Screening (27 May 2021)

- Methane was detected at a maximum concentration of 0.1 %vol (SVP-3-10).
- VOCs were detected at a range of 0.2 parts per million (ppm) (SVP-5-10) to 295.3 ppm (SVP-3-5).
- Hydrogen Sulfide was detected at a range of 2 ppm (SVP-5-20, SVP-6-5) to 4 ppm (SVP-5-10).

⁴ California Department of Toxic Substances Control, 2008. Determination of a Southern California Regional Background Arsenic Concentration in Soil.

- During screening of the probes, the GEM landfill multi-gas meter recorded maximum concentration of carbon monoxide (9,500 ppm). It is possible that this could lead to erroneous readings of the other constituents analyzed by the GEM landfill multi-gas meter.

Secondary Screening (28 May 2021)

- Methane was detected at a range of 10% of the LEL (SVP-4-5) to >99% LEL (SVP-3-5). During screening on 28 May 2021, field screening data was collected using a 4-gas meter. As a result, methane results provided in percent of the LEL.
- VOCs were detected at a range of 0.6 ppm (SVP-5-20) to 342.1 ppm (SVP-3-5).
- Hydrogen Sulfide was detected at a range of 0.8 ppm (SVP-2-5) to 71.5 (SVP-3-5).

Third Screening (1 June 2021)

- Methane was detected at a 0.1 %vol (SVP-3-5).
- VOCs were detected at a range of 0.5 ppm (SVP-4-10) to 206.0 ppm (SVP-3-5).
- Hydrogen Sulfide was detected at a range of 1 ppm (SVP-5-10, SVP-5-20) to 4 ppm (SVP-3-5).

Fourth Screening (25 June 2021)

- Methane was detected at a concentration of 2.3 %vol (SVP-3-5).
- VOCs were detected at a range of 0.7 ppm (SVP-5-5) to 3.1 ppm (SVP-6-20).
- Hydrogen Sulfide was not detected.

SUMMARY OF RESULTS

Initial Limited ESA and Additional Limited ESA sampling was completed by Geosyntec personnel to support environmental due diligence activities at the Site. Six triple-nested soil vapor probes were installed at depths 5 ft bgs, 10 ft bgs, and 20 ft bgs. An additional seven boreholes were advanced; soil vapor-probes were installed at a depth of 5 ft bgs in two of the boreholes and a total of three soil samples were collected from two of the boreholes. Soil vapor samples were collected at a depth of 5 ft bgs from five of the six original probes and the two additional probes. Three sub-slab vapor pins were installed within the building and sampled. Analytical results were compared to the lower of the California DTSC-SLs and the USEPA RSLs.

Soil and soil vapor samples were collected in areas of the clarifier and former USTs. Arsenic was detected at a concentration above the Commercial SL in the three soil samples at concentrations of

2.2 mg/kg (SVP-3A-5) to 4.2 mg/kg (SB-1-5); however, concentrations were below documented background concentrations for Southern California (12 mg/kg)⁵. Remaining constituent concentrations of metals and TPH were below Commercial SLs.

Localized benzene was detected at a concentration above the Commercial SL (14 µg/m³) at one soil vapor sampling location (31 µg/m³) at SVP-4-5. Chloroform was detected at a concentration above the Commercial SL (18 µg/m³) at two soil vapor sampling locations (20 µg/m³ at SVP-3E and 30 µg/m³ at SVP-7). Methane was detected at concentrations ranging from 0 to 2.3 %vol. Remaining constituent concentrations of VOCs in the soil vapor and sub-slab vapor samples were below Commercial SLs. These data do not appear indicative of significant or wide-spread contamination.

FINDINGS AND CONCLUSIONS

Abandoned-in-place UST (REC): Soil sampling did not identify contamination indicative of a release from the UST. No additional characterization is warranted. However, the abandoned UST should be removed during redevelopment in accordance with the Orange County Health Care Agency (OCHCA) Environmental Health Division – Guidelines for the Removal of Underground Storage Tanks⁶. A soil management plan (SMP) should be prepared and include a section for UST removal, including application and permitting requirements, soil/tank handling procedures, and safety requirements. Additional SMP components are described in Recommendations section below.

Abandoned Clarifier and Former USTs (HREC): Soil vapor sampling did not identify contamination associated with the former USTs and clarifier. No additional characterization is warranted.

Surface Staining and Transformer Room (*de minimis* conditions): No indications of contamination were identified near the elevator and transformer rooms. No additional characterization is warranted. However, these areas should be observed during building demolition for indications of previously unknown contamination. A SMP should be prepared and include a section for visual soil screening. Additional SMP components are described in Recommendations section below.

Methane Gas: The Site is adjacent to the active Brea-Olinda Oil Field and within the City of Brea. Based on the Site's location, the City of Brea's Combustible Soil-Gas Guideline is applicable.

RECOMMENDATIONS

⁵ California Department of Toxic Substances Control, Human and Ecological Risk Office. Human Health Risk Assessment (HHRA) Note Number 11 - Southern California Ambient Arsenic Screening Level. 28 December 2020.

⁶ 2024, Orange County Health Care Agency. Public Health Services, Environmental Health Division, Guidelines for the Removal of Underground Storage Tanks. Revised 22 April 2024.

Based on the findings and conclusions above, Geosyntec recommends the following:

1. **Soil Management Plan**

The development and implementation of a Soil Management Plan (SMP) is recommended to provide guidance and procedures for proper soil handling and UST removal during earthwork activities for redevelopment of the Site. The SMP should include the following elements:

- **Site Description:** Description of general Site conditions, soil types, and identification of prior Site testing results, constituents of concern, and possible residual contaminants and suspected materials.
- **Health and Safety Measures:** No soil disturbance or excavation activities shall be performed by any contractor without a Site-specific Health and Safety Plan (HASP) that complies with applicable occupational health and safety standards. The HASP should specify appropriate levels of personal protective equipment (PPE), as well as monitoring criteria for increasing the level of PPE. The General Contractor and each subcontractor shall require its employees who may directly contact suspect soil to perform all activities in accordance with the HASP.
- **Soil Management Procedures:** Any soil that is disturbed, excavated, or trenched due to on-site construction activities shall be handled in accordance with applicable local, state, and federal regulations. Procedures to be included in the SMP should include: waste segregation, visual soil screening; stormwater pollution controls; criteria for onsite re-use of soils; soil characterization and profiling requirements prior to offsite transportation of excavated soil; measures to prevent soil track-out; and soil import criteria (if needed). An environmental monitor, an experienced professional trained in the practice of the evaluation and screening of soil for potential impacts working under the direction of a licensed Geologist or Engineer, shall be identified by the property owner prior to the beginning of work.
- **Identification and Management of Unanticipated Conditions:** The potential exists for encountering of unanticipated contamination or features. The SMP should include descriptions of possible indications of contamination (i.e., suspect soil) that may be observed and the appropriate response measures. Potential conditions to be addressed should include, at a minimum: soil staining; strong or unusual odors; oily or shiny soil; unknown or unidentified liquids; buried structures such as tanks, pipelines, sumps or vaults; and existing or former wells including water wells, monitoring wells, or oil wells. If the General Contractor or subcontractor(s) encounter any suspect soil, the General Contractor and subcontractor(s) shall immediately stop work and take measures to not further disturb the soils and inform the property owner's representative and the environmental monitor.

Procedures should be included in the SMP to guide the environmental monitor's sampling and analysis for characterization of suspect soil.

- **Dust Management:** Procedures to minimize generation of fugitive dust during earthwork. Water or other effective means shall be used to control dust where drilling, excavating, stockpiling, or other dust producing operations occur in accordance with applicable local and state regulations.
- **UST Removal Procedures:** One existing abandoned UST is present onsite and is planned for removal. Additional unanticipated USTs may also be encountered and require removal. All UST removals should be performed in accordance with the Orange County Health Care Agency (OCHCA) Environmental Health Division – Guidelines for the Removal of Underground Storage Tanks. The SMP should include a description of the applicable OCHCA permitting and notification requirements, soil/tank handling procedures, inspection and reporting requirements.
- **Documentation:** Identify requirements for documentation and tracking of soil characterization, waste profiling, offsite transportation, disposal, and soil import, and soil import.

2. Removal of Abandoned On-site UST

The proper removal of the abandoned on-site UST and additional USTs, if encountered, should be performed in accordance with the procedures to be defined in the Site-specific SMP.

3. City of Brea Combustible Soil-Gas Guideline

Based on the Site's location within the City of Brea, redevelopment planning and design is required to coordinate with City of Brea, Building & Safety Division for compliance with the Combustible Soil-Gas Guideline (Soil-Gas Guideline).

CLOSURE

We appreciate the opportunity to support this project. Please do not hesitate to contact the undersigned should you have questions.

Sincerely,

Wendy Key, PG (CA, WA) CEM (NV)
Principal

Notes:

Soil vapor samples were collected on 01 June 2021 and analyzed for Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) Method TO-15. Soil vapor samples SVP-3E and SVP-7 were collected on and 07 July 2021 and analyzed for VOCs by Method TO-15, Methane and Nitrogen by Method ASTM D1946, and TPH-Gasoline by Method TO-3.

Only compounds detected at least once in air samples are shown.

1. VOC values reflect the most recent screening levels for indoor air quality, based on a 1×10^{-6} carcinogenic risk standard (the non-cancer endpoint is reported where a cancer endpoint has not been established) with a hazard quotient (HQ) of 1, divided by the default subsurface to indoor air attenuation factor of 0.03 (Technical Guide for Assessing and Mitigating the Vapor Intrusion Pathway from Subsurface Vapor Sources to Indoor Air, EPA, June 2015). The source of the indoor air screening levels is the California Department of Toxic Substance Control Note 3 Screening Levels (CA DTSC-SLs; Cancer or Non-Cancer Endpoint; June 2020) and/or the EPA Regional Screening Levels (RSLs; May 2021), whichever is most conservative. Screening level values for indoor air are shown as published and may have varying amounts of significant figures. Soil vapor screening level values have been limited to two significant figures unless the calculated screening level has greater than two significant figures that are not decimals (e.g. total xylenes: 3,333 µg/m³).

2. Samples were collected at 5 feet below ground surface. SVP-1 was unable to be sampled due to moisture in the probe and is not shown on this table as a result.

µg/m³ = Micrograms per cubic meter

"<" = Not detected above the laboratory reporting limit shown

-- = No Screening Level Available

NA = Not Analyzed

LEL = Lower Explosive Limit

ppmv = parts per million by volume

Detected concentrations are in bold.

50 Detected concentration is greater than the commercial screening level.

Notes:

Soil samples were collected on 2 July 2021 and analyzed for volatile organic compounds (VOCs) by Environmental Protection Agency (EPA) Method 8260B, total petroleum hydrocarbons (TPH) by EPA Method 8015B, metals by EPA Method 6010B/7471A, and cyanide by EPA Method 9012A.

Only compounds detected in soil samples are shown.

There are not detectable concentrations of VOCs by EPA Method 8260B, cyanide by EPA Method 9012A, and Mercury by EPA Method 7471A.

Detected concentrations are in **bold**.

Soil samples were collected at 5 feet below ground surface at SVP-3A-5 and at 5 and 10 feet below ground surface at SB-1.

^a Values are the lower of the California Department of Toxic Substance Control Note 3 Screening Levels (CA DTSC-SLs; Cancer or Non-Cancer Endpoint), June 2020, or EPA Regional Screening Levels (RSLs), May 2020, for soil.

^b Laboratory analytical report incorrectly identified this sample as SUP-3A-5.

mg/kg = milligrams per kilogram

"<" = Not detected above the laboratory reporting limit shown

3.4 Detected concentration is greater than the commercial screening level.

Notes:
 All probe depths for SVP-1 through SVP-6 were screened for fixed gases following installation (Initial), at least 24 hours after installation (Second), prior to sampling (Third), and approximately three weeks following sampling (Fourth).
 Probes were screened at 5 and 10 ft bgs, with terminal depths set at a maximum depth of 20 ft bgs or refusal.
 Only compounds detected at least once in samples are shown.
 NR - No Reading due to malfunctioning equipment.
 -- = Probe unable to be screened due to moisture (M), no flow (F), or hydrogen sulfide/VOC interference (I).
 a) The lower explosive limit (LEL) for methane is 5%. 100% of the LEL means 5% methane has been detected and the LEL has been reached.
 b) The LEL for hydrogen sulfide is 4% or 4,000 parts per million (ppm).
 c) On May 28, field screening data was collected using a 4-gas meter. As a result, methane results provided in LEL%. Values shown as >[number] indicate the maximum reading for the instrument was exceeded.
 ft bgs = feet below ground surface
 in. H2O = inches of water
 %vol = percent by volume
 ppmv = parts per million by volume as measured by a photoionization detector (PID) with 100 ppm isobutylene.
 VOCs = Volatile Organic Compounds
 Detected concentrations are in **bold**.

50 Detected concentration is greater than the LEL.

 MinRae 3000 [®] RKI GX-6000/GX-2012 Serial No.: FA03224 Lamp: (10.6V) 11.7 eV
 Landtech GEM 5000 Plus (or Similar) Landfill Gas Meter Serial No.: EA04608 [®] FA02258
 MDG 2002 Helium detector Serial No.: _____
 Leak Detection Method: Helium Water Dam Other NIA
 Approximate Building Square Footage: No Building

2. Surface Type: Asphalt Concrete Grass Other _____
 Surface Thickness: 5 ^{inches}/centimeters Unknown
 Slab Condition: Good
 Vapor Barrier Present?: Yes No Unknown

3. Probe construction details:
 Probe type (i.e. VaporPin[®], Stainless Steel Implant, Threaded Brass Sub-slab Probe, etc.): 4" Stainless Steel Implant
 Tubing Type (Nylaflo, Teflon, or Teflon-lined tubing): 1/4" Nylaflo
 Probe diameter: 7/16 inch Tubing diameter: 1/4 inch Borehole diameter: 2.25 inch
 Drilling Method (i.e. Direct Push, Hammer Drill, Hand Auger, etc.): Direct Push
 Borehole Depth (ft bgs): 20 Sand Pack Interval (ft bgs): S-10
 Date Installed: 5/27/21 Time Installed: 0915
 4. 1 Casing Volume: Sub-slab probe <0.1 L Soil vapor probe 1.6 L (Calculate volume for soil vapor probe)

5. Initial Probe Pressure (Prior to Purging) (readings should be to 0.000 in-W.C.)
 Positive Negative/Vacuum
 Gauge Reading: 0.32 units in.H₂O Gauge or Meter Used: Manometer
 6. Field tubing blank reading (ppm), 1: PID Reading: 0.0 ppm.
 7. Shut in test prior to purging completed? Yes No

8. Purging - Probes should be purged a minimum of 3 pore volumes prior to sample collection.
 *If methane is detected during purging at greater than 0.1% (2% of LEL) but less than 30% notify PM and re-sample all probes 24-hours later.

Date	Start Time	End Time	Elapsed Time (min.)	Sag Volume (L)	Purge Rate (LPM)	Cumulative Volume (L)	CH ₄ * (%v)	CO ₂ (%v)	O ₂ (%v)	H ₂ S (ppmv)	Helium		VOCs by PID (ppmv)

 Landtech GEM 5000 Plus (or Similar) Landfill Gas Meter Serial No.: FA02258
 MDG 2002 Helium detector Serial No.: FAD1250
 Leak Detection Method: Helium Water Dam Other _____
 Approximate Building Square Footage: No Building

2. Surface Type: Asphalt Concrete Grass Other _____
 Surface Thickness: 5 inches/centimeters Unknown
 Slab Condition: Good
 Vapor Barrier Present?: Yes No Unknown

5. Initial Probe Pressure (Prior to Purging) (readings should be to 0.000 in-w.c.):
 Positive Negative/Vacuum
 Gauge Reading: 0.00 Units: in H₂O Gauge or Meter Used: Manometer

6. Field tubing blank reading (ppmv): PID Reading 0.0 ppmv

7. Shut in test prior to purging completed? Yes No

3. Probe construction details:
 Probe type (i.e. VaporPin®, Stainless Steel Implant, Threaded Brass Sub-slab Probe, etc.): 6" Stainless Steel Implant
 Tubing Type (Nylallow, Teflon, or Teflon-lined tubing): 1/4" Nylallow
 Probe diameter: 7/16 inch Tubing diameter: 1/4 inch Borehole diameter: 2.25 inch
 Drilling Method (i.e. Direct Push, Hammer Drill, Hand Auger, etc.): Direct Push
 Borehole Depth (ft bgs): 2.0 Sand Pack Interval (ft bgs): 4-5
 Date Installed: 5/27/21 Time Installed: 17:41

4. Casing Volume: Sub-slab probe <0.1 L Soil vapor probe 0.3 L [Calculate volume for soil vapor probe]

8. Purging - Probes should be purged a minimum of 3 pore volumes prior to sample collection.
 *If methane is detected during purging at greater than 0.1% (2% of LEL) but less than 30%, notify PM and re-sample all probes 24-hours later.

Date	Start Time	End Time	Elapsed Time (min.)	Bag Volume (L)	Purge Rate (LPM)	Cumulative Volume (L)	CH ₄ * (%v)	CO ₂ (%v)	O ₂ (%v)	H ₂ S (ppmv)	Helium		VOCs by PID (ppmv)

Date Received: 06/01/21

This data package contains sample and QC results for five air samples, requested for the above referenced project on 06/01/21. The samples were received cold and intact.

Volatile Organics in Air by MS (EPA TO-15):

High RPD was observed for methylene chloride in the QC sample duplicate (SDUP) of SVP-5-5 (lab # 446010-004). SVP-2-5 (lab # 446010-001), SVP-3-5 (lab # 446010-002), and SVP-5-5 (lab # 446010-004) were diluted due to high hydrocarbons. Please note that Methylene chloride is a common laboratory solvent and that low-level detections in samples may be due to laboratory exposure. No other analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946):

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1
 Client: Geosyntec Consultant Project: Hazel
 Date Received: 6/1/21 Sampler's Name Present: Yes No

Section 2
 Sample(s) received in a cooler? Yes, How many? _____ No (skip section 2) Sample Temp (°C) ^{ambient}
 (No Cooler) : _____
 Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____
(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)
 Shipping Information: _____

Section 3
 Was the cooler packed with: Ice Ice Packs Bubble Wrap Styrofoam
 Paper None Other _____
 Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6
 For discrepancies, how was the Project Manager notified? Verbal PM Initials: _____ Date/Time _____
 Email (email sent to/on): _____ / _____
 Project Manager's response:

Completed By: Date: 6/1/21

Date Received: 07/02/21

This data package contains sample and QC results for three air samples, requested for the above referenced project on 07/02/21. The samples were received intact.

Volatile Organics in Air by MS (EPA TO-15):

No analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946):

No analytical problems were encountered.

Volatile Organics in Air GC - TO3 (EPA TO-3M):

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1
 Client: Geosyntec Consultants Project: Hazel/Brea
 Date Received: 07/02/21 Sampler's Name Present: Yes No

Section 2
 Sample(s) received in a cooler? Yes, How many? _____ No (skip section 2) Sample Temp (°C) (No Cooler) : 21.5
 Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____
 (Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)
 Shipping Information: _____

Section 3
 Was the cooler packed with: Ice Ice Packs Bubble Wrap Styrofoam
 Paper None Other _____
 Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments
 Client did not receive a pressure gauge, so there is no initial or final pressure on the COC.

Section 6
 For discrepancies, how was the Project Manager notified? Verbal PM Initials: _____ Date/Time _____
 Email (email sent to/on): PAM /07/2/21
 Project Manager's response: _____

Completed By: Seena Sylvestri Date: 07/02/21

Date Received: 07/02/21

This data package contains sample and QC results for three soil samples, requested for the above referenced project on 07/02/21. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B):

Low recovery was observed for diesel C10-C28 in the MSD for batch 269913; the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and the low recovery was not associated with any reported results. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

Low recoveries were observed for chromium, nickel, and zinc in the MS/MSD for batch 269966; the parent sample was not a project sample, and the LCS was within limits. High recoveries were also observed for chromium, nickel, and zinc; the LCS was within limits. High RPD was observed for chromium and zinc. No other analytical problems were encountered.

Cyanide - Semi-Automated Method (EPA 9012A):

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1
 Client: Geosyntec Consultants Project: Hazel/Brea
 Date Received: 07/02/21 Sampler's Name Present: Yes No

Section 2
 Sample(s) received in a cooler? Yes, How many? _____ No (skip section 2) Sample Temp (°C) (No Cooler) : 21.5
 Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____
(Acceptance range is < 6°C but not frozen [for Microbiology samples, acceptance range is < 10°C but not frozen]. It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)
 Shipping Information: _____

Section 3
 Was the cooler packed with: Ice Ice Packs Bubble Wrap Styrofoam
 Paper None Other _____
 Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6
 For discrepancies, how was the Project Manager notified? Verbal PM Initials: _____ Date/Time _____
 Email (email sent to/on): _____ / _____
 Project Manager's response:

Completed By: _____ Date: _____

Paige Farrell

Lab Job Number: 447640
Location: Brea DJT4
Date Received: 07/07/21

This data package contains sample and QC results for two air samples, requested for the above referenced project on 07/07/21. The samples were received cold and intact.

Volatile Organics in Air by MS (EPA TO-15):

No analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946):

No analytical problems were encountered.

Volatile Organics in Air GC - TO3 (EPA TO-3M):

No analytical problems were encountered.

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1
 Client: GEOSYNTEC CONSULTANTS Project: BREA DJTY
 Date Received: 7/7/21 Sampler's Name Present: Yes No

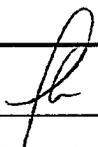

Section 2
 Sample(s) received in a cooler? Yes, How many? _____ No (skip section 2) Sample Temp (°C) (No Cooler): AMBIENT
 Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____
(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)
 Shipping Information: _____

Section 3
 Was the cooler packed with: Ice Ice Packs Bubble Wrap Styrofoam
 Paper None Other _____
 Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	/		
Are sample IDs present?	/		
Are sampling dates & times present?	/		
Is a relinquished signature present?	/		
Are the tests required clearly indicated on the COC?	/		
Are custody seals present?		/	
If custody seals are present, were they intact?			/
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			/
Did all samples arrive intact? If no, indicate in Section 4 below.	/		
Did all bottle labels agree with COC? (ID, dates and times)	/		
Were the samples collected in the correct containers for the required tests?	/		
Are the containers labeled with the correct preservatives?			/
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			/
Was a sufficient amount of sample submitted for the requested tests?	/		

Section 5 Explanations/Comments

Section 6
 For discrepancies, how was the Project Manager notified? Verbal PM Initials: _____ Date/Time _____
 Email (email sent to/on): _____ / _____
 Project Manager's response:

Completed By:  Date: 7/7/21

Analysis Results for 447640

APPENDIX D.4:
SOILS REPORT: LIMITED ESA MEMORANDUM

This page intentionally left blank.

MEMORANDUM

DATE: September 13, 2023
FILE No: 0105005.24
To: Raven Blackwood – Brea Fire Department
From: Michael Geyer – KERNTEC Engineering
Subject: 275 S. Valencia Avenue, Brea, California
Geosyntec Soils Report: Limited ESA – July 16, 2021

Soils Report sent via e-mail
This memo sent via e-mail

The subject soils report was submitted for my review.
Upon review, two significant findings are relevant,

- The report and data are dated (July 16, 2021) and not current, and
- Methods used for soil-vapor sampling and analysis are not 100% compliant with the City of Brea’s Combustible Soil-Gas Guidelines, Part-I: Combustible Soil-Gas Investigations.

That said, the report and data still appear useful and relevant for the time.

Based on the data presented in Table 4 of the subject report, findings include:

- Elevated concentrations of methane in several locations,
- Elevated concentrations of carbon dioxide in several locations, and
- Decreased concentrations of oxygen (i.e., less than anticipated) indicating a reducing soil-atmosphere due the presence of hydrocarbons.

The data shows the site to be impacted by petrogenic gases associated with underlying and known petroleum reservoir. Ares within the City of Brea are known to be impacted by surface expressions of combustible soil-gases from the reservoir, and the subject site appears to be similarly impacted.

Whereas the data may be dated and not current, coupled with the report not being 100% in compliance with the City’s current guidelines, if the applicant would commit to **Full Mitigation**, no further studies of the site’s soil-gas may be warranted.

A copy of the City’s most current guidelines can be found here:
<https://www.ci.brea.ca.us/documentcenter/view/3894>
and **Full Mitigation** is described on Page 10, Part II: Combustible Soil-Gas Mitigation.

If you have any questions, please call KERNTEC’s Bakersfield office @ (661) 873-7277. If I am not there, please leave a message and I will return you call as soon as I am able.

VdB	Vibration Velocity Level

1.0 INTRODUCTION

This report documents the results of a Noise and Vibration Impact Assessment completed for the DJT4 Parcel Delivery Facility Project (Project), which proposes the demolition of an existing office building in order to accommodate the construction of 163,350 square feet merchandise warehouse and storage space, 18,150 square feet of ancillary office space, vehicle parking spaces, bicycle parking spaces, and landscaping in the City of Brea, California. This report was prepared as a comparison of predicted Project noise levels to noise standards promulgated by the City of Brea General Plan Public Safety Element and Municipal Code. The purpose of this report is to estimate Project-generated noise and to determine the level of impact the Project would have on the environment.

1.1 Project Location

The Project Site would be located at 275 Valencia Avenue in Brea, California on Assessor Parcel Numbers (APN) 320-233-17, 320-301-11, and 320-301-12. The land uses within the vicinity of the Project Site include existing light industrial, office, and surface parking uses to the west, south, and north. More specifically, to east and south-southeast, across Valencia Avenue, is La Floresta, a master-planned horizontal mixed-use community comprised of single-family residential, multi-family residential, and commercial uses. Primary regional access to the Project Site is provided via Imperial Highway/State Route (SR) 90, approximately 0.2 mile to the south of the Project Site and Carbon Canyon Road/SR 142 approximately 0.4 mile to the north of the Project Site. Local access to the Project Site is provided via Valencia Avenue, Surveyor Avenue, E. Birch Street, Nasa Street, and Enterprise Street.

1.2 Project Description

The Proposed Project would demolish the existing three-story 637,503-square-foot office building and surface parking lot to construct a 181,500-square-foot parcel delivery facility, consisting of 163,350 square feet of merchandise warehouse and storage space, 18,150 square feet of ancillary office space, short-term and long-term bicycle parking spaces, and 323,744 square feet of drought tolerant landscaping, on a 31.6-acre site. The Project would also provide 1,065 parking spaces (consisting of 304 automobile spaces, 757 delivery van spaces, and four trailer spaces), 180 ancillary van loading spaces, and 13 Utility Tractor Rig loading spaces to serve facility operations. The proposed facility would be centrally located on the site with loading areas and vehicle parking would surround the facility. The Project would locate its line haul truck loading/docking area and truck circulation route on the western portion of the Project Site to face other industrial uses. The Project would be required to provide a minimum of 399 trees on the Project Site.

The northern portion of the Project Site, encompassing approximately 24.2 acres, is designated as Light Industrial and zoned Light Industrial (M-1). Allowable uses include research and development, light manufacturing and processing, offices, warehousing and storage, logistics facilities, high-technology production, and related uses. The southern approximately 7.4-acre portion of the Project Site is designated as Mixed Use II and zoned Mixed-Use II (MU-II). The Mixed-Use II designation and MU-II zoning permits parking facilities as one of the allowed land uses. As such, the Project building would be located entirely

within the M-1 zone, and surface parking and drive aisles would be located within the M-1 and MU-II zoned portions of the Project Site.

The proposed facility would absorb portions of service areas that are currently covered by existing delivery stations in order to reduce the distance traveled by delivery vans throughout the region. The Project would operate 24 hours per day, 7 days per week to support delivery of packages to customer locations. On a daily basis, there would be a total of 231 associates, managers, and dispatchers who work shifts within the proposed facility; 345 van drivers; and 97 Amazon Flex drivers. Van drivers and Amazon Flex drivers would work shifts between the hours of 9:20 a.m. and 9:50 p.m. to deliver customer packages. In addition, it is anticipated that the Project Site would receive 31-line haul trucks delivering packages each day, between the hours of 10:00 p.m. to 8:00 a.m.

Construction of the Project would consist of demolition of the existing buildings, followed by grading and excavation to a depth of 21 feet below existing grade. It is estimated that approximately 25,680 cubic yards of soil would be exported from the Project Site during the grading phase. The building foundation would then be laid, followed by building construction, paving/concrete installation, and landscape installation. Project construction is anticipated to occur over a 24-month period and be completed in mid-2027.

2.0 ENVIRONMENTAL NOISE AND GROUND BORNE VIBRATION ANALYSIS

2.1 Fundamentals of Noise and Environmental Sound

2.1.1 Addition of Decibels

The decibel (dB) scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted (dBA), an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound. When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be three dB higher than one source under the same conditions.¹ For example, a 65-dB source of sound, such as a truck, when joined by another 65 dB source results in a sound amplitude of 68 dB, not 130 dB (i.e., doubling the source strength increases the sound pressure by three dB). Under the decibel scale, three sources of equal loudness together would produce an increase of five dB.

Typical noise levels associated with common noise sources are depicted in Figure 2-1.

2.1.2 Sound Propagation and Attenuation

Noise can be generated by a number of sources, including mobile sources such as automobiles, trucks and airplanes, and stationary sources such as construction sites, machinery, and industrial operations. Sound spreads (propagates) uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB (dBA) for each doubling of distance from a stationary or point source.² Sound from a line source, such as a highway, propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of approximately 3 dBA for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics.³ No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dBA per doubling of distance is normally assumed. For line sources, an overall attenuation rate of three dB per doubling of distance is assumed.⁴

Noise levels may also be reduced by intervening structures; generally, a single row of detached buildings between the receptor and the noise source reduces the noise level by about five dBA⁵, while a solid wall or berm generally reduces noise levels by 10 to 20 dBA⁶. However, noise barriers or enclosures specifically designed to reduce site-specific construction noise can provide a sound reduction 35 dBA or greater⁷. To achieve the most potent noise-reducing effect, a noise enclosure/barrier must physically fit in the available space, must completely break the "line of sight" between the noise source and the receptors, must be free of degrading holes or gaps, and must not be flanked by nearby reflective surfaces. Noise barriers must be sizable enough to cover the entire noise source and extend lengthwise and vertically as far as feasibly possible to be most effective. The limiting factor for a noise barrier is not the component of noise transmitted through the material, but rather the amount of noise flanking around and over the barrier. In general, barriers contribute to decreasing noise levels only when the structure breaks the "line of sight" between the source and the receiver.

The manner in which older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows⁸. The exterior-to-interior reduction of

newer residential units is generally 30 dBA or more.⁹ Generally, in exterior noise environments ranging from 60 dBA Community Noise Equivalent Level (CNEL) to 65 dBA CNEL, interior noise levels can typically be maintained below 45 dBA, a typical residential interior noise standard, with the incorporation of an adequate forced air mechanical ventilation system in each residential building, and standard thermal-pane residential windows/doors with a minimum rating of Sound Transmission Class (STC) 28. (STC is an integer rating of how well a building partition attenuates airborne sound. In the U.S., it is widely used to rate interior partitions, ceilings, floors, doors, windows, and exterior wall configurations). In exterior noise environments of 65 dBA CNEL or greater, a combination of forced-air mechanical ventilation and sound-rated construction methods is often required to meet the interior noise level limit. Attaining the necessary noise reduction from exterior to interior spaces is readily achievable in noise environments less than 75 dBA CNEL with proper wall construction techniques following California Building Code methods, the selections of proper windows and doors, and the incorporation of forced-air mechanical ventilation systems.

2.1.3 Noise Descriptors

The decibel scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. The noise descriptors most often encountered when dealing with traffic, community, and environmental noise include the average hourly noise level (in L_{eq}) and the average daily noise levels/community noise equivalent level (in L_{dn} /CNEL). The L_{eq} is a measure of ambient noise, while the L_{dn} and CNEL are measures of community noise. Each is applicable to this analysis and defined as follows:

- **Equivalent Noise Level (L_{eq})** is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
- **Day-Night Average (L_{dn})** is a 24-hour average L_{eq} with a 10-dBA “weighting” added to noise during the hours of 10:00 pm to 7:00 am to account for noise sensitivity in the nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn} .
- **Community Noise Equivalent Level (CNEL)** is a 24-hour average L_{eq} with a 5-dBA weighting during the hours of 7:00 pm to 10:00 pm and a 10-dBA weighting added to noise during the hours of 10:00 pm to 7:00 am to account for noise sensitivity in the evening and nighttime, respectively.

⁹ HMMH. 2006. Transit Noise and Vibration Impact Assessment, Final Report.

Table 2-1 provides a list of other common acoustical descriptors.

Table 2-1. Common Acoustical Descriptors	
Descriptor	Definition
Decibel, dB	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micropascals (or 20 micronewtons per square meter), where 1 pascal is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g., 20 micropascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hertz (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sounds are below 20 Hz and ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels is measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high-frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, L_{eq}	The average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
L_{max} , L_{min}	The maximum and minimum A-weighted noise level during the measurement period.
L_{01} , L_{10} , L_{50} , L_{90}	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, L_{dn} or DNL	A 24-hour average L_{eq} with a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn} .
Community Noise Equivalent Level, CNEL	A 24-hour average L_{eq} with a 5 dBA "weighting" during the hours of 7:00 p.m. to 10:00 p.m. and a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends on its amplitude, duration, frequency, and time of occurrence and tonal or informational content, as well as the prevailing ambient noise level.

The A-weighted decibel sound level scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about ± 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends on the distance between the receptor and the noise source. Close to the noise source, the models are accurate to within about ± 1 to 2 dBA.

2.1.4 Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL or L_{dn} is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in A-weighted noise levels (dBA), the following relationships should be noted in understanding this analysis:

- Except in carefully controlled laboratory experiments, a change of 1 dBA cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A change in level of at least 5 dBA is required before any noticeable change in community response would be expected. An increase of 5 dBA is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

2.1.5 Effects of Noise on People

2.1.5.1 Hearing Loss

While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise.

The Occupational Safety and Health Administration (OSHA) has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over eight hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.

2.1.5.2 Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes of annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation between noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources.

2.2 Fundamentals of Environmental Groundborne Vibration

2.2.1 Vibration Sources and Characteristics

Sources of earthborne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or manmade causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g., factory machinery) or transient (e.g., explosions).

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the peak particle velocity (PPV); another is the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. The RMS velocity is defined as the average of the squared amplitude of the signal. The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

PPV is generally accepted as the most appropriate descriptor for evaluating the potential for building damage. For human response, however, an average vibration amplitude is more appropriate because it takes time for the human body to respond to the excitation (the human body responds to an average vibration amplitude, not a peak amplitude). Because the average particle velocity over time is zero, the RMS

amplitude is typically used to assess human response. The RMS value is the average of the amplitude squared over time, typically a 1- sec. period¹⁰.

Table 2-2 displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high-noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible. For instance, heavy-duty trucks generally generate groundborne vibration velocity levels of 0.006 PPV at 50 feet under typical circumstances, which as identified in Table 2-2 is considered very unlikely to cause damage to buildings of any type. Common sources for groundborne vibration are planes, trains, and construction activities such as earthmoving which requires the use of heavy-duty earth moving equipment.

¹⁰ FTA. 2018. Transit Noise and Vibration Impact Assessment.

Table 2-2. Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibration Levels

Peak Particle Velocity (inches/second)	Approximate Vibration Velocity Level (VdB)	Human Reaction	Effect on Buildings
0.006–0.019	64–74	Range of threshold of perception	Vibrations unlikely to cause damage of any type
0.08	87	Vibrations readily perceptible	Threshold at which there is a risk of architectural damage to extremely fragile historic buildings, ruins, ancient monuments
0.1	92	Level at which continuous vibrations may begin to annoy people, particularly those involved in vibration sensitive activities	Threshold at which there is a risk of architectural damage to fragile buildings. Virtually no risk of architectural damage to normal buildings
0.25	94	Vibrations may begin to annoy people in buildings	Threshold at which there is a risk of architectural damage to historic and some old buildings
0.3	96	Vibrations may begin to feel severe to people in buildings	Threshold at which there is a risk of architectural damage to older residential structures
0.5	103	Vibrations considered unpleasant by people subjected to continuous vibrations	Threshold at which there is a risk of architectural damage to new residential structures and Modern industrial/commercial buildings

Source: Caltrans 2020

3.0 EXISTING ENVIRONMENTAL NOISE SETTING

3.1 Noise Sensitive Land Uses

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Additional land uses such as hospitals, historic sites, cemeteries, and certain recreation areas are considered sensitive to increases in exterior noise levels. Schools, churches, hotels, libraries, and other places where low interior noise levels are essential are also considered noise-sensitive land uses. The nearest sensitive receptors to the Project Site include residences across Valencia Avenue, approximately 116 feet from the Project Site. Additionally, Olinda Elementary School is located approximately 920 feet northwest, and Brea Sports Park is located approximately 520 feet north from the Project Site. There are no additional sensitive receptors within 1,000 feet of the Project Site.

3.1.1 Existing Ambient Noise Environment

The city experiences typical urban noises, such as mobile noise sources from vehicles on roadways, industrial and commercial activities, intermittent construction noises, and general outdoor noise activities. According to the City of Brea General Plan Public Safety Element, the major sources of noise within the city arise from vehicle traffic along roadways and highways, including State Highway 57, Imperial Highway, Brea Boulevard, Valencia Avenue, and Lambert Road. Other noise within the city is associated with commercial and neighborhood land uses, which may experience noise from mechanical equipment, playgrounds, leaf blowers, and construction equipment. Within the Project Area, the most common and significant noise sources are associated with traffic on Valencia Avenue/SR 142, commercial and industrial activities in the vicinity, highway noise from SR 90, and other typical residential noises like dogs barking, radios, and landscaping equipment. As shown in Table 3-1 below, the ambient recorded noise levels range from 61.0 dBA to 76.0 dBA L_{eq} on and in the vicinity of the Project Site.

3.1.2 Existing Ambient Noise Measurements

In order to quantify existing ambient noise levels in the Project Area, ECORP Consulting, Inc. conducted four short-term noise measurements (15-minutes) on the morning of June 3rd, 2024. The 15-minute measurements were taken between 10:37 a.m. and 12:00 p.m. These short-term noise measurements are representative of typical existing noise exposure within and immediately adjacent to the Project Site during the daytime (see Attachment A for a visual representation of the measurement locations). The average noise levels at each location are listed in Table 3-1.

Location Number	Location	L_{eq} dBA	L_{min} dBA	L_{max} dBA	Time
1	Southeast intersection at Rose Drive and Valencia Avenue	72.2	50.5	85.0	10:37 a.m. – 10:55 a.m.
2	On sidewalk north of La Entrada and east of Valencia Avenue	65.6	38.9	73.7	11:03 a.m. - 11:18 a.m.
3	Northern corner of Adelante and Paseo Drive	61.0	37.7	74.6	11:24 a.m. – 11:40 a.m.
4	On sidewalk north of La Crescenta, and east of Valencia Avenue	76.0	51.5	89.0	11:45 a.m. – 12:00 p.m.

Source: Measurements were taken by ECORP with a Larson Davis Spartan 821 sound level meter, which satisfies the American National Standards Institute for general environmental noise measurement instrumentation. Prior to the measurements, the Spartan 821 sound level meter was calibrated according to manufacturer specifications with a Larson Davis CAL200 Class I Calibrator. See Attachment A for noise measurement outputs.

Notes: L_{eq} is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. L_{min} is the minimum noise level during the measurement period and L_{max} is the maximum noise level during the measurement period.

As shown in Table 3-1, the ambient recorded noise levels range from 61.0 dBA to 76.0 dBA L_{eq} over the course of the four short-term noise measurements taken in the Project vicinity in June of 2024. The most common noise in the Project vicinity is produced by automotive vehicles (e.g., cars, trucks, buses, motorcycles) on the local surrounding roadways such as Valencia Avenue.

According to the City of Brea General Plan Public Safety Element, transportation noise such as noise from highways and vehicular traffic, is and will continue to be the predominant noise source within the city. Figure 15 of the Public Safety Element shows existing transportation noise level contours throughout the city and Figure 16 of the Public Safety Element shows projected future transportation noise level contours. These maps indicate that the city’s noise levels are projected to increase due to increasing traffic volumes throughout the city. As indicated in Figures 15 and 16 of the Public Safety Element, part of the Project Site is currently within, and will remain within, the 60-65 dBA CNEL noise contours caused by traffic on Valencia Avenue. It should be noted that the noise levels referenced from the General Plan Noise Element differ numerically from measured levels in Table 3-1 because the measurements represent noise levels reported in different noise metrics (e.g., short term noise measurements are the L_{eq} values and modeled traffic noise level contours are reported in CNEL).

3.1.3 Existing Roadway Noise Levels

Existing roadway noise levels were calculated for the roadway segments in the Project vicinity. This task was accomplished using the FHWA Highway Traffic Noise Prediction Model (FHWA-RD-77-108) (see Attachment B) and traffic volumes and intersection data from the Traffic Impact Assessment by NV5 Engineers &

Consultants¹¹. The model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates (energy rates) used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by Caltrans. The Caltrans data shows that California automobile noise is 0.8 to 1.0 dBA higher than national levels and that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels. The average daily noise levels along these roadway segments are presented in Table 3-2.

¹¹ NV5. 2024. Traffic Impact Assessment for the Brea Delivery Station.

Table 3-2. Existing Roadway Noise Levels		
Roadway Segment	Surrounding Uses	CNEL at 100 feet (East/West) from Centerline of Roadway
Valencia Avenue/ SR 142		
South of Imperial Highway	Residential and Commercial	62.1

Source: Traffic noise levels were calculated by ECORP using the FHWA roadway noise prediction model in conjunction with the trip generation rates and intersection data identified by NV5 Engineers & Consultants (2024). The most relevant roadway segments were chosen by NV5 Engineers & Consultants (2024). Refer to Attachment B for traffic noise modeling assumptions and results.

As shown, the existing traffic-generated noise level on Project-vicinity roadways currently ranges from 43.9 to 63.5 dBA CNEL at a distance of 100 feet from the centerline. As previously described, CNEL is a 24-hour average L_{eq} with a 5-dBA weighting during the hours of 7:00 pm to 10:00 pm and a 10-dBA weighting added to noise during the hours of 10:00 pm to 7:00 am to account for noise sensitivity in the evening and nighttime, respectively. It should be noted that the modeled noise levels depicted in Table 3-2 may differ from measured levels in Table 3-1 because the measurements represent noise levels at different locations around the Project Area and are also reported in different noise metrics (e.g., noise measurements are the L_{eq} values and traffic noise levels are reported in CNEL).

4.0 REGULATORY FRAMEWORK

4.1 Federal

4.1.1 Occupational Safety and Health Act of 1970

OSHA regulates onsite noise levels and protects workers from occupational noise exposure. To protect hearing, worker noise exposure is limited to 90 decibels with A-weighting (dBA) over an eight-hour work shift (29 Code of Regulations 1910.95). Employers are required to develop a hearing conservation program when employees are exposed to noise levels exceeding 85 dBA. These programs include provision of hearing protection devices and testing employees for hearing loss on a periodic basis.

4.1.2 Federal Transit Administration

The FTA provides a guidance manual that contains procedures for predicting and assessing noise and vibration impacts of proposed transit projects. This manual acknowledges that noise and vibration are among the primary concerns of the surrounding communities. Project construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the surrounding land use. Due to the lack of standardized construction noise thresholds, the FTA provides guidelines that are typically considered applicable criteria for construction noise assessments in a CEQA analysis. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} and a nighttime exterior construction noise level of 70 dBA L_{eq} as a reasonable threshold for noise sensitive residential land uses.¹²

4.1.3 Federal Interagency Committee on Noise (FICON)

The FICON thresholds of significance assist in the evaluation of increased traffic noise. The 2000 FICON findings provide guidance as to the significance of changes in ambient noise levels due to transportation noise sources. FICON recommendations are based on studies that relate aircraft and traffic noise levels to the percentage of persons highly annoyed by the noise. FICON's measure of substantial increase for transportation noise exposure is as follows:

- If the existing ambient noise levels at existing and future noise-sensitive land uses (e.g. residential, etc.) are less than 60 dBA CNEL and the project creates a readily perceptible 5 dBA CNEL or greater noise level increase, or
- If the existing noise levels range from 60 to 65 dBA CNEL and the project creates a barely perceptible 3 dBA CNEL or greater noise level increase, or

¹² FTA. 2018. Transit Noise and Vibration Impact Assessment.

- If the existing noise levels already exceed 65 dBA CNEL and the project creates a community noise level increase of greater than 1.5 dBA CNEL.

4.2 State

4.2.1 State of California General Plan Guidelines

The State of California regulates vehicular and freeway noise affecting classrooms, sets standards for sound transmission and occupational noise control, and identifies noise insulation standards and airport noise/land-use compatibility criteria. The State of California General Plan Guidelines (State of California 2003), published by the Governor's Office of Planning and Research (OPR), also provides guidance for the acceptability of projects within specific CNEL/L_{dn} contours. The guidelines also present adjustment factors that may be used in order to arrive at noise acceptability standards that reflect the noise control goals of the community, the particular community's sensitivity to noise, and the community's assessment of the relative importance of noise pollution.

4.2.2 State Office of Planning and Research Noise Element Guidelines

The State OPR *Noise Element Guidelines* include recommended exterior and interior noise level standards for local jurisdictions to identify and prevent the creation of incompatible land uses due to noise. The Noise Element Guidelines contain a Land Use Compatibility table that describes the compatibility of various land uses with a range of environmental noise levels in terms of the CNEL.

4.2.3 California Department of Transportation

In 2020, the California Department of Transportation (Caltrans) published the Transportation and Construction Vibration Manual.¹³ The manual provides general guidance on vibration issues associated with the construction and operation of projects concerning human perception and structural damage. Table 2-2 above presents recommendations for levels of vibration that could result in damage to structures exposed to continuous vibration.

4.3 Local

4.3.1 City of Brea General Plan Public Safety Chapter

The Public Safety Chapter of the General Plan provides policy direction for minimizing excessive noise within the community and aims to protect residents, neighborhoods, schools, and noise-sensitive land uses from health impacts. By identifying noise-sensitive land uses and establishing noise level compatibility guidelines for land uses, noise considerations will influence the general distribution, location, and intensity of future

¹³ Caltrans. 2020. Transportation and Construction Vibration Guidance Manual.

land uses. The result is that effective land use planning and mitigation can alleviate the majority of noise problems. The following goals and policies have been identified to be applicable to the Proposed Project:

Goal PS-9: Minimize the impact of point source noise and ambient noise levels throughout the community.

Policy PS-9.1: Evaluate the need to require acoustical studies for development proposals that address both direct and indirect, particularly traffic, noise impacts, and require such studies, with appropriate mitigation included, as warranted.

Policy PS-9.3: Ensure that acceptable noise levels are maintained near schools, hospitals, convalescent homes, and other noise sensitive areas in accordance with the City's Municipal Code and noise standards contained in the General Plan.

Policy PS-9.5: Avoid placing high-noise activity centers near residential areas.

Goal PS-11: Minimize noise impacts from sources other than transportation.

Policy PS-11.1: Require the inclusion of noise mitigation measures, techniques, and design features in the planning, design, and construction of future development and redevelopment project.

Policy PS-11.3: Minimize stationary noise sources and noise emanating from construction activities and special events.

Policy PS 11.4: Require that new non-residential development plan delivery areas away from existing residential areas.

The Public Safety Chapter contains compatibility noise standards for a variety of land uses, shown in Table 4-1 below.

Table 4-1. City of Brea Land Use Compatibility Standards				
Land Use Categories	Average CNEL or L_{dn}, dB			
	Normally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable
Residential - Low Density Single Family, Duplex, Mobile Homes	50-60	60-65	65-75	>75
Residential – Multiple Family	50-60	60-65	65-75	>75
Transient Lodging – Motels, Hotels	50-60	60-70	70-80	>80
Schools, Libraries, Churches, Hospitals, Nursing Homes	50-60	60-70	70-80	>80
Auditoriums, Concert Halls, Amphitheater	NA	50-65	NA	>65
Sports Arenas, Outdoor Spectator Sports	NA	50-70	NA	>70
Playgrounds, Neighborhood Park	50-70	NA	70-75	>75
Golf Courses, Riding Tables, Water Recreation, Cemeteries	50-70	NA	70-80	>80
Office Buildings, Business Commercial and Professional	50-65	65-75	>75	NA
Industrial Manufacturing, Utilities, Agriculture	50-70	70-80	>80	NA

Source: City of Brea General Plan Public Safety Element 2021.

Notes:

Normally Acceptable: Specified land use is satisfactory, based on the assumption that any buildings are of normal conventional construction, without any special noise insulation requirements.

Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of noise reduction requirements is made and needed noise insulation features included in design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning, will normally suffice.

Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of noise reduction requirements must be made and needed noise insulation features included in design.

Clearly Unacceptable: New construction or development should generally not be undertaken.

4.3.2 City of Brea Municipal Code

The City of Brea’s regulations with respect to noise are included in Title 8 Chapter 20 of the Municipal Code. The Noise Regulations provide noise standards and restrictions within Brea. Section 8.20.050 outlines regulations for exterior noise at residential properties, limiting noises to 55 dBA during daytime hours (7:00 a.m. – 10:00 p.m.) and 50 dBA during nighttime hours (10:00 p.m. – 7:00 a.m.). Furthermore, when measured at the residential property, it is unlawful for noise to exceed:

- The noise standard for a cumulative period of more than 30 minutes in any hour
- The noise standard plus five dB(A) for a cumulative period of more than fifteen minutes in any hour
- The noise standard plus ten dB(A) for a cumulative period of more than five minutes in any hour
- The noise standards plus fifteen dB(A) for a cumulative period of more than one minute in any hour
- The noise standard plus twenty dB(A) for any period of time.

It is further specified that in the event that the ambient noise exceeds the noise standards, the standard shall be increased to reflect the ambient noise level. Additionally, Section 8.20.060 limits interior daytime (7:00 a.m. – 10:00 p.m.) noise at residential land uses to 55 dBA and interior nighttime (10:00 p.m. – 7:00 a.m.) noise at residential land uses to 45 dBA.

The Municipal Code Section 8.20.070 exempts construction noise from City noise standards, provided that the activities do not occur between the hours of 7:00 p.m. to 7:00 a.m., Monday through Saturday or any time on Sundays or federal holidays. Additionally, Municipal Code Section 20.20.040 limits operational vibrations to 0.003 inches per second PPV at the property boundary of the land use.

5.0 Impact Assessment

5.1 Thresholds of Significance

The impact analysis provided below is based on the following California Environmental Quality Act Guidelines Appendix G thresholds of significance. The Project would result in a significant noise-related impact if it would result in the:

- 1) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
- 2) Generation of excessive groundborne vibration or groundborne noise levels.
- 3) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

For the purposes of this analysis, Project construction noise is compared to the regulation-exempted hours of construction established by the City as well as the FTA standard of 80 dBA. The City does not regulate vibrations associated with construction; however, a discussion of construction vibration is included for full disclosure purposes. For comparison purposes, the Caltrans¹⁴ recommended construction vibration standard of 0.3 inch per second PPV with respect to the prevention of structural damage for older residential buildings is used as a threshold. This is also the level at which vibrations may begin to annoy people in buildings. Vibration as a result of Project operations will be compared to the City's standard of 0.003 inches per second at the Project property line. The increase in transportation-related noise is compared against the FICON recommendation for evaluating the impact of increased traffic noise. The FICON thresholds of significance guide the evaluation of increased traffic noise based on changes in ambient noise levels from transportation sources. According to FICON, if the existing ambient noise levels at noise-sensitive areas are below 60 dBA CNEL, a project that increases noise by 5 dBA CNEL or more is considered significant. For noise levels between 60 and 65 dBA CNEL, a project with a 3 dBA CNEL increase is significant. If noise levels exceed 65 dBA CNEL, a project causing an increase of more than 1.5 dBA CNEL is deemed significant. Onsite noise generated as a result of Project operations is compared to City's exterior residential noise standards described in the Municipal Code 8.20.050. As previously described in Section 4.3.2 of this report, City Municipal Code Section 8.20.050 specifies that in the event that the ambient noise exceeds the noise standards, the standard shall be increased to reflect the ambient noise level.

5.2 Methodology

This analysis of the existing and future noise environments is based on empirical observations and noise prediction modeling. Predicted construction noise levels were calculated utilizing the FHWA's Roadway

¹⁴ Caltrans. 2020. Transportation and Construction Vibration Guidance Manual.

Construction Noise Model.¹⁵ Groundborne vibration levels associated with construction-related activities for the Project have been evaluated utilizing typical groundborne vibration levels associated with construction equipment. Potential groundborne vibration impacts related to structural damage and human annoyance were evaluated, taking into account the distance from construction activities to nearby structures and typically applied criteria for structural damage and human annoyance.

Transportation-source noise levels associated with the Project were calculated using the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108) with trip generation rates from the Traffic Impact Assessment.¹⁶ Onsite stationary source noise levels associated with the Project have been calculated with the SoundPLAN 3D noise model, which predicts noise propagation from a noise source based on the location, noise level, and frequency spectra of the noise sources as well as the geometry and reflective properties of the local terrain, buildings and barriers. Two scenarios were modeled in SoundPLAN. The first scenario accounts for daytime activity (7:00 a.m. – 10:00 p.m.) with all internal circulation routes modeled as line sources traversing the proposed path of travel provided by the Project proponent. Additionally, area sources were placed over the proposed van loading areas as well as the line haul truck stalls located directly adjacent to the proposed building. The second scenario accounts for nighttime activity (10:00 p.m. – 7:00 a.m.) with line haul trucks being the only delivery and onsite activity during that time. Line haul truck circulation was modeled as line sources traversing the proposed path of travel provided by the Project proponent as well as an areas source encompassing the line haul truck stalls. Modeled noise levels are based on reference noise levels. Noise levels are collected from field noise measurements and other published sources from similar types of activities and are then used to estimate noise levels expected with the Project’s non-transportation noise sources. The reference noise levels are used to represent a worst-case noise environment as noise levels from area and point sources (e.g., internal truck circulation, truck unloading) can vary throughout the day. SoundPLAN allows computer simulations of noise situations, and creates noise contours maps using reference noise levels, topography, point and area noise sources, mobile noise sources, and intervening structures.

5.3 Impact Analysis

5.3.1 *Would the Project Result in Short-Term Construction-Generated Noise in Excess of City Standards?*

Onsite Construction Noise

Construction noise associated with the Proposed Project would be temporary and would vary depending on the specific nature of the activities being performed. Noise generated would primarily be associated with the operation of off-road equipment for onsite construction activities as well as construction vehicle traffic on area roadways. Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., site preparation, excavation, paving). Noise generated by construction

¹⁵ FHWA. 2006. Roadway Construction Noise Model.

¹⁶ NV5. 2024. Traffic Impact Assessment for the Brea Delivery Station.

equipment, including earth movers, pile drivers, and portable generators, can reach high levels. Typical operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by three to four minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). During construction, exterior noise levels could negatively affect sensitive land uses in the vicinity of the construction site. The individual pieces on construction equipment proposed for each phase of the Project are listed in Table 5-1. This information was provided by the Project proponent and employed with the FHWA Roadway Noise Construction Model to calculate construction noise from the Proposed Project.

Source: Construction equipment provided by Project proponent.

The City does not promulgate a numeric threshold pertaining to the noise associated with construction. This is due to the fact that construction noise is temporary, short term, intermittent in nature, and would

cease on completion of the Project. However, as previously mentioned, the Municipal Code Section 8.20.070 exempts construction noise, provided that the activities do not occur between the hours of 7:00 p.m. to 7:00 a.m., Monday through Saturday or any time on Sundays or federal holidays. In order to remain compliant with the City's regulations, the Proposed Project would be required to follow these construction guidelines.

The recent Fifth District of Appeal decision in *King and Gardiner Farms, LLC v. County of Kern et al.* 45 Cal.App.5th 814,¹⁷ held that the use of an absolute noise threshold for evaluating all ambient noise impacts violated CEQA because it did not provide a "complete picture" of the noise impacts that may result from implementation of the ordinance. As such, the Proposed Project's construction noise is estimated and then added to the average daily ambient noise level in the Project Area as determined by the baseline noise survey conducted by ECORP Consulting (see Table 3-1). As previously described, the dB scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Furthermore, when combining two separate sources where one of the noise sources is 10 dB or more greater than the other noise source, the noise contribution of the quieter source is completely obscured by the louder source.

The nearest sensitive receptors to the Project Site include residences across Valencia Avenue, approximately 116 feet from the Project Site. To estimate the worst-case onsite construction noise levels that may occur at the nearest noise-sensitive receptors and in order to evaluate the potential health-related effects (physical damage to the ear) from construction noise, the construction equipment noise levels were calculated using the Federal Highway Administration's Roadway Noise Construction Model and compared against the construction-related noise level threshold established in the FTA's Transit Noise and Vibration Impact Assessment Manual.¹⁸ The FTA identifies a noise level threshold based on the loudness. The FTA construction-related noise level threshold is set at 80 dBA. For the purposes of this analysis, this threshold of 80 dBA L_{eq} is used as an acceptable threshold for construction noise at the nearby sensitive receptors.

It is acknowledged that the majority of construction equipment is not situated at any one location during construction activities, but rather spread throughout the Project Site and at various distances from sensitive receptors. Therefore, this analysis employs FTA guidance for calculating construction noise, which recommends measuring construction noise produced by all construction equipment simultaneously from the center of the Project Site,¹⁹ which in this case is approximately 574 feet from the closest single family home east of the Project Site, across Valencia Avenue. The anticipated short-term construction noise levels generated for the necessary equipment for each phase of construction are presented in Table 5-2.

Table 5-2. Construction Average (dBA) Noise Levels at Nearest Receptors					
Construction Phase	Average Ambient Noise Level* (dBA L_{eq})	Exterior Construction Noise Level @ Closest Noise Sensitive Receptor (dBA L_{eq})	Existing Ambient Noise + Exterior Construction Noise Levels (dBA L_{eq})	Construction Noise Standard (dBA L_{eq})	Exceeds Standards?
Demolition	68.7	69.2	72.2	80	No
Site Preparation and Grading		70.5	73.5	80	No
Building Construction		63.9	69.9	80	No
Paving and Painting		59.4	69.2	80	No

Source: Construction noise levels were calculated by ECORP Consulting using the FHWA Roadway Noise Construction Model (FHWA 2006). Refer to Attachment C for Model Data Outputs.

Notes: *Average ambient noise levels of the Project Area were estimated using the average L_{eq} of the four short term noise measurement taken on June 3rd, 2024, and identified in Table 3-1.

Construction equipment used and construction schedule information provided by the Project proponent. Consistent with FTA recommendations for calculating construction noise, construction noise was measured from the center of the Project Site (FTA 2018), which is 574 feet from the nearest sensitive receptor.

L_{eq} = The equivalent energy noise level, is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.

As shown in Table 5-2, the Project’s contribution of construction noise combined with the ambient noise environment would not exceed the 80 dBA FTA construction noise threshold during any phase of construction at the nearby noise-sensitive receptors. It is noted that construction noise was modeled on a worst-case basis and is considered in addition to ambient noise levels currently experienced in the Project Area. It is very unlikely that all pieces of construction equipment would be operating at the same time for the various phases of Project construction as well as at the point closest to residences.

Offsite Construction Worker Trips

Project construction would result in additional traffic on adjacent roadways over the period that construction occurs. According to the California Emissions Estimator Model, which is used to predict the number of construction-related automotive trips, the maximum number of Project construction trips traveling to and from the Project Site during a single construction phase would not be expected to exceed 208 daily trips in total. According to Caltrans Technical Noise Supplement to the Traffic Noise Analysis Protocol,²⁰ a doubling of traffic on a roadway is required to result in an increase of 3 dB (outside of the laboratory, a 3-dBA change is considered a just-perceivable difference). The Project Site would be accessible

²⁰ Caltrans. 2013. Technical Noise Supplement to the Traffic Noise Analysis Protocol.

via Valencia Avenue/SR 142 during construction. The segment on SR 142 traversing the Project Area currently accommodates an average of 15,450 vehicle daily trips.²¹ Therefore, the Project's construction trips would not result in a doubling of traffic on the local transportation network, and therefore its contribution to existing traffic noise would not be perceptible. Additionally, it is noted that construction is temporary, and these trips would cease upon completion of the Project.

5.3.2 Would the Project Result in a Substantial Permanent Increase in Ambient Noise Levels in Excess of City Standards During Operations?

As previously described, noise-sensitive land uses are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. Residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas would each be considered noise-sensitive and may warrant unique measures for protection from intruding noise. The nearest existing noise-sensitive land uses to the Project Site include the single-family residences to the east across Valencia Avenue.

Operational Offsite Traffic Noise

Future traffic noise levels throughout the Project vicinity for the Proposed Project were modeled based on the traffic volumes identified in Traffic Impact Assessment²² to determine the noise levels along Project vicinity roadways. Table 5-3 shows the calculated offsite roadway noise levels with Project traffic during Existing and Existing Plus Project conditions as well as Future No Project and Future Plus Project. The City of Brea does not regulate noise from transportation sources for industrial projects and does not have noise standards for such sources. As such, the thresholds recommended by FICON will be used in this analysis.

- If the existing ambient noise levels at existing and future noise-sensitive land uses (e.g. residential, etc.) are less than 60 dBA CNEL and the project creates a readily perceptible 5 dBA CNEL or greater noise level increase,
or
- If the existing noise levels range from 60 to 65 dBA CNEL and the project creates a barely perceptible 3 dBA CNEL or greater noise level increase,
or
- If the existing noise levels already exceed 65 dBA CNEL and the project creates a community noise level increase of greater than 1.5 dBA CNEL.

North of E. Birch Street	43.9	43.9	+0.0	43.9	43.9	+0.0	>5 / >5	No / No

Source: Traffic noise levels were calculated by ECORP using the FHWA roadway noise prediction model in conjunction with the trip generation rate identified by NV5 Engineers & Consultants (2024). The most relevant roadway segments were chosen by NV5 Engineers & Consultants. Refer to Attachment B for traffic noise modeling assumptions and results.

Notes: A one percent growth rate was added to all 2025 traffic volumes to account for an opening year of 2027 per the City's TIA guidelines.

As shown in Table 5-3, none of the Project vicinity roadway segments would experience an incremental increase of traffic noise in excess of the FICON standards.

Operational Onsite Noise

The Project is proposing the construction of 163,350 square feet of warehouse and storage space, 18,150 square feet of ancillary office space, vehicle parking spaces, bicycle parking spaces, and landscaping. On-site noise associated with the Proposed Project has been calculated using the SoundPLAN 3D noise model and Project Site plans provided by the Project proponent. SoundPLAN 3D noise model generates computer simulations of noise situations based on the site's features. Two scenarios were modeled in SoundPLAN. The first scenario accounts for daytime activity (7:00 a.m. – 10:00 p.m.) with all internal circulation routes modeled as line sources traversing the proposed path of travel provided by the Project proponent. Additionally, area sources were placed over the proposed van loading areas as well as the line haul truck stalls located directly adjacent to the proposed building. The second scenario accounts for nighttime activity (10:00 p.m. – 7:00 a.m.) with line haul trucks being the only delivery and onsite activity during that time. Line haul truck circulation was modeled as line sources traversing the proposed path of travel provided by the Project proponent as well as an area source encompassing the line haul truck stalls. A reference noise

measurement representing internal truck circulation sourced from a Loading Dock Noise Study²³ was used for all line sources and reference noise level for general cargo truck unloading was accessed from the SoundPLAN Noise Library and used for all area sources. These reference noise measurements encapsulate all anticipated noise associated with warehouse uses including backup beepers, door slamming, forklift operations, and internal vehicle movement.

The City has established exterior noise standards, limiting noises to 55 dBA during daytime and 50 dBA during nighttime hours at residential properties. Table 5-4 shows the predicted Project noise levels at 23 noise-sensitive locations in the Project vicinity during daytime and nighttime activity, which includes the nearby residences to the east of the Project Site, as predicted by SoundPLAN. However, a review of the surrounding area shows that there is an existing masonry wall that runs along the residential areas to the east. Noise levels can be reduced by intervening structures or walls. For instance, a barrier, such as a masonry wall, located close to a source offers a 10 dBA reduction given that it is completely shielded.²⁴ The existing wall completely shields the first story of all adjacent residential properties and, as such, a 10 dBA reduction is applied to the noise level at the sensitive receptors predicted by the SoundPLAN 3D noise model (Table 5-4). Additionally, a noise contour graphic for each scenario (see Figure 5-1 and Figure 5-2) has been prepared to provide a visual depiction of the predicted noise levels in the Project vicinity from Project operations.

22	Residence East of Project Site	48.7 / 28.1	55/50	No / No
23	Residence East of Project Site	48.5 / 28.0	55/50	No / No

Source: SoundPLAN v 9.0. Refer to Attachment D for Model Data Outputs.

As shown in Table 5-4, Project operational noise would not exceed the City's 55 dBA exterior noise standard for daytime or the 50 dBA exterior noise standard for nighttime at any location. Furthermore, as previously described in Section 4.3.2 of this report, City Municipal Code Section 8.20.050 specifies that in the event that the ambient noise exceeds the noise standards, the standard shall be increased to reflect the ambient

noise level, which during the daytime is approximately 68.7 dBA based on the average of the ambient noise measurements taken in the area.

It is noted that some of the residences fronting Valencia Avenue adjacent to the Project Site are two-story homes and the masonry wall is not tall enough to shield these second stories, thus no noise-reducing benefit is inherent to the second story portion of these homes. However, none of these residences have outdoor use areas, such as balconies, on the second story. Therefore, operational Project noise at the second stories of these existing residences is calculated and compared to the City's interior noise standards, which are 55 dBA during the daytime and 45 dBA during the nighttime. As previously explained, a 10 dBA noise reduction was applied to all modeled noise levels at the first story of existing residences, as identified in Table 5-4. When accounting for Project noise levels at the exterior of the second stories of these existing residences, which would not benefit from the noise-reducing properties of the existing masonry wall, noise as a result of Project operations could result in 63.7 dBA during the daytime and 48.5 dBA during the nighttime. The exterior shell of a house can provide a reduction of exterior-to-interior noise levels of 12 dBA with windows open and 24 dBA with windows closed.²⁵ Thus, Project noise would result in interior daytime noise levels of 51.7 dBA at the loudest (63.7 dBA – 12 dBA= 51.7 dBA) and interior nighttime noise levels of 36.5 dBA at the loudest (48.5 dBA – 12 dBA= 36.5 dBA) with windows open and would not exceed City's interior noise standards.

5.3.3 **Would the Project Expose Structures to Substantial Groundborne Vibration During Construction?**

Excessive groundborne vibration impacts result from continuously occurring vibration levels. Increases in groundborne vibration levels attributable to the Project would be primarily associated with short-term construction-related activities. Construction on the Project Site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved. Ground vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance.

Construction-related ground vibration is normally associated with impact equipment such as pile drivers, jackhammers, and the operation of some heavy-duty construction equipment, such as dozers and trucks. Vibration decreases rapidly with distance, and it is acknowledged that construction activities would occur throughout the Project Site and would not be concentrated at the point closest to sensitive receptors. Groundborne vibration levels associated with construction equipment are summarized in Table 5-5.

Equipment Type	Peak Particle Velocity at 25 Feet (inches per second)
Large Bulldozer	0.089
Pile Driver	0.170
Loaded Haul Trucks	0.076
Hoe Ram	0.089
Jackhammer	0.035
Small Bulldozer/Tractor	0.003
Vibratory Roller	0.210

Source: FTA 2018; Caltrans 2020

The City does not regulate or have a numeric threshold associated with construction vibrations. However, a discussion of construction vibration is included for full disclosure purposes. For comparison purposes, the Caltrans (2020b) recommended standard of 0.3 inches per second PPV with respect to the prevention of structural damage for older residential buildings is used as a threshold. This is also the level at which vibrations may begin to annoy people in buildings. The nearest structure of concern to the construction site is an industrial building west of the Project Site approximately 109 feet distant.

Based on the representative vibration levels presented for various construction equipment types in Table 5-5 and the construction vibration assessment methodology published by the FTA,²⁶ it is possible to estimate the potential project construction vibration levels. The FTA provides the following equation:

$$[PPV_{\text{equip}} = PPV_{\text{ref}} \times (25/D)^{1.5}]$$

Table 5-6 presents the expected Project related vibration levels at a distance of 109 feet.

Table 5-6 Construction Vibration Levels at 109 Feet							
Receiver PPV Levels (in/sec)¹					Peak Vibration	Threshold	Exceed Threshold?
Large Bulldozer, Caisson Drilling, & Hoe Ram	Loaded Trucks	Jackhammer	Pile Driver	Vibratory Roller			
0.009	0.008	0.003	0.018	0.023	0.023	0.3	No

Notes: ¹Based on the Vibration Source Levels of Construction Equipment included on Table 5-4 (FTA 2018). Distance to the nearest structure of concern is approximately 109 feet measured from Project Site center.

As shown in Table 5-6, vibration as a result of onsite construction activities on the Project Site would not exceed 0.3 PPV at the nearest structure of concern. Thus, onsite Project construction would not exceed the recommended threshold.

5.3.4 Would the Project Expose Structures to Substantial Groundborne Vibration During Operations?

Vibration as a result of Project operations is compared to the City’s standard of 0.003 inches per second at the Project property line. Project operations would not include the use of any stationary equipment that would result in excessive vibration levels. However, the Project would accommodate a maximum of 62 heavy-duty truck trips a day. According to the Caltrans Transportation and Construction Vibration Guidance Manual (2020b), heavy-duty trucks traveling on paved surfaces rarely generate vibration amplitudes high enough to cause structural or cosmetic damage. However, there have been cases in which heavy trucks traveling over potholes or other discontinuities in the pavement have caused vibration high enough to result in complaints from nearby residents. Where discontinuities exist in the pavement, heavy-duty truck passages can be the primary source of localized, intermittent vibration peaks. These peaks typically last no more than a few seconds and often for only a fraction of a second.²⁷ Because vibration drops off rapidly

²⁶ FTA. 2018. Transit Noise and Vibration Impact Assessment.

²⁷ Caltrans. 2020. Transportation and Construction Vibration Guidance Manual.

with distance, there is rarely a cumulative increase in ground vibration from the presence of multiple trucks.²⁸ In general, more trucks result in more vibration peaks, though not necessarily higher peaks.²⁹

Heavy-duty truck trips would follow the proposed path of travel presented in the Project's Site Plan. Heavy-duty trucks would access the Project Site at the northwestern corner of the site and proceed eastward on a path of travel approximately 45 feet from the Project boundary at the nearest. According to the FTA Transit Noise and Vibration Impact Assessment Manual,³⁰ heavy-duty trucks traveling at 30 miles per hour can be expected to generate vibration levels of 0.007 inches per second PPV. Project heavy-duty trucks are not expected to travel this fast on the Project Site during operations and the FTA provides the following equation to estimate potential vibration levels from heavy-duty trucks traveling at different speeds:

$$[\text{Adjusted Speed PPV} = 20\log(\text{speed}/\text{speed reference [30 mph]})]$$

Assuming average heavy-duty truck speeds of 15 miles per hour on the Project Site, Project heavy-duty trucks would generate vibration levels of 0.003 inches per second PPV at the Project boundary and therefore would not exceed the City standard.

5.3.5 Would the Project Expose People Residing or Working in the Project Area to Excessive Airport Noise?

The Project Site is located approximately 7.72 miles northeast of the Fullerton Municipal Airport. In consultation with the Orange County Airport Environs Land Use Plan for the Fullerton Municipal Airport, the Project Site is not expected to be a location that would be subject to the airport's noise. Therefore, the Proposed Project would not expose those visiting or working on the Project Site to excessive airport noise.

5.3.6 Cumulative Impacts

Cumulative Construction Noise

Noise from the construction of development projects is typically localized and has the potential to affect noise-sensitive uses within 500 feet from the construction site. Thus, noise from construction activities for two projects within 1,000 feet of each other can contribute to a cumulative noise impact for receptors located midway between the two construction sites. Related Project (RP) Number 1 is a proposed light industrial warehouse building located at 3200 Nasa Street on the northwest corner of Nasa Street and Surveyor Avenue, immediately west of the Project Site and more than 900 feet from the residences to the east of Valencia Avenue. There are no sensitive receptors located midway between RP Number 1 and the Project Site. RP Number 2 is the 262-acre Brea 265 Specific Plan Project located approximately 600 feet northeast of the Project Site at its closest point. There are residences to the east of Valencia Avenue and

²⁸ Ibid

²⁹ Ibid

³⁰ FTA. 2018. Transit Noise and Vibration Impact Assessment.

south of North Rose Drive that would be located between the Project Site and RP Number 2. However, there is an existing solid wall that runs along the east side of Valencia Avenue and along the south side of North Rose Drive that would provide shielding of construction related noise between the Project and RP Number 2. In addition, due to the topography and the height of the residential structures, most of the residences located between the Project and RP Number 2 would not have direct “line of sight” of the Project or RP Number 2. Furthermore, construction noise levels from the Project and related projects would be intermittent and temporary, and it is anticipated that, as with the Project, the related projects would comply with City’s noise standards and allowable hours of construction. Any noise associated with cumulative construction activities would be reduced to the degree reasonably and technically feasible through proposed mitigation measures, if required, for each individual related project. Therefore, construction noise levels resulting from the Project would not combine with construction noise levels generated by the two related projects to create a cumulative noise impact. Accordingly, the Project’s contribution to cumulative construction noise impacts would not be considerable, and cumulative construction noise impacts at the sensitive uses (e.g., residential uses) located in proximity to the Project Site would be less than significant.

Cumulative Traffic Noise

Cumulative traffic noise levels throughout the Project vicinity (i.e., vicinity roadway segments that traverse noise-sensitive land uses) was modeled based on the traffic volumes identified by NV5 Engineers & Consultants³¹ to determine the noise levels along Project vicinity roadways. Table 5-2 above shows the calculated offsite roadway noise levels under Future No Project conditions compared to Future Plus Project conditions. As shown, no roadway segment would experience an increase of noise beyond the FICON significance standards. Therefore, the Project’s contribution to cumulative noise impacts from traffic would be less than cumulatively considerable.

Cumulative Onsite Operational Noise

The Project Site and related projects would be developed with uses that generate noise from a number of noise sources including mechanical equipment, outdoor activity, and onsite vehicle operation. Cumulative long-term noise sources generated by the Project combined with the two related projects could cause local noise level increases. As concluded above, Project operations would not exceed the City’s daytime or nighttime exterior noise standard at the noise-sensitive receptors in the Project area. As stated above, RP Number 1 is a light industrial warehouse project located west of the Project Site at a distance of approximately 900 feet from the nearest sensitive residential receptor east of Valencia Avenue/SR 142. Since RP Number 1 is located further from the sensitive receptors than the Project, it is expected that the noise levels generated by the operation of RP Number 1 also would not exceed the City’s daytime or nighttime exterior noise standard. RP Number 2 proposes residential, park, and open space uses, which are not expected to have stationary noise sources that would generate excessive operational noise levels. Furthermore, there is an existing solid wall that runs along the east side of Valencia Avenue and along the south side of North Rose Drive that would reduce the noise levels generated by the Project and RP Number

³¹ NV5. 2024. Traffic Impact Assessment for the Brea Delivery Station.

2 at the sensitive residential receptors. Therefore, the Project's contribution to cumulative operational noise impacts would not be cumulatively considerable and cumulative impacts would be less than significant.

Cumulative Vibration

As discussed above, Project construction activities would not generate groundborne vibration on-site above the 0.3 inches per second PPV threshold as established by Caltrans. Project operational activities would not generate groundborne vibration that would exceed the City's standard of 0.003 inches per second PPV. Groundborne vibration generated by the related projects would be isolated to the area immediately surrounding the vibration source. Therefore, the Project's contribution to cumulative vibration impacts would not be cumulatively considerable and cumulative impacts would be less than significant.

Attachment C – VMT Screening Tool Output

A. Introduction

The applicant is proposing to demolish an existing 637,503-square-foot office building, and adjacent surface parking lot, and then construct a 181,500-square-foot parcel delivery facility, consisting of 163,350 square feet of warehouse space and 18,150 square feet of ancillary office space, delivery van queuing area, and surface parking lots (Project). The new e-commerce delivery station would be developed on an approximately 31.6-acre parcel along Valencia Avenue in Brea, California (Project Site). Figure 1 depicts the Project Site location in the City of Brea (City). This memorandum has been prepared to adhere to the City's Transportation Impact Analysis Guidelines, dated September 2020 (TIA Guidelines). Figure 1 shows the location of the project.

The existing vacant building on the Project Site was recently occupied by Bank of America (BoFA) and used as a commercial office building. The Project is consistent with the Project Site's land use designation and zoning, under the City's General Plan and Zoning code, of light industrial and mixed use. To adhere to local and state policies, the following vehicle miles traveled (VMT) study was prepared for purposes of determining whether the Project may have transportation impacts.

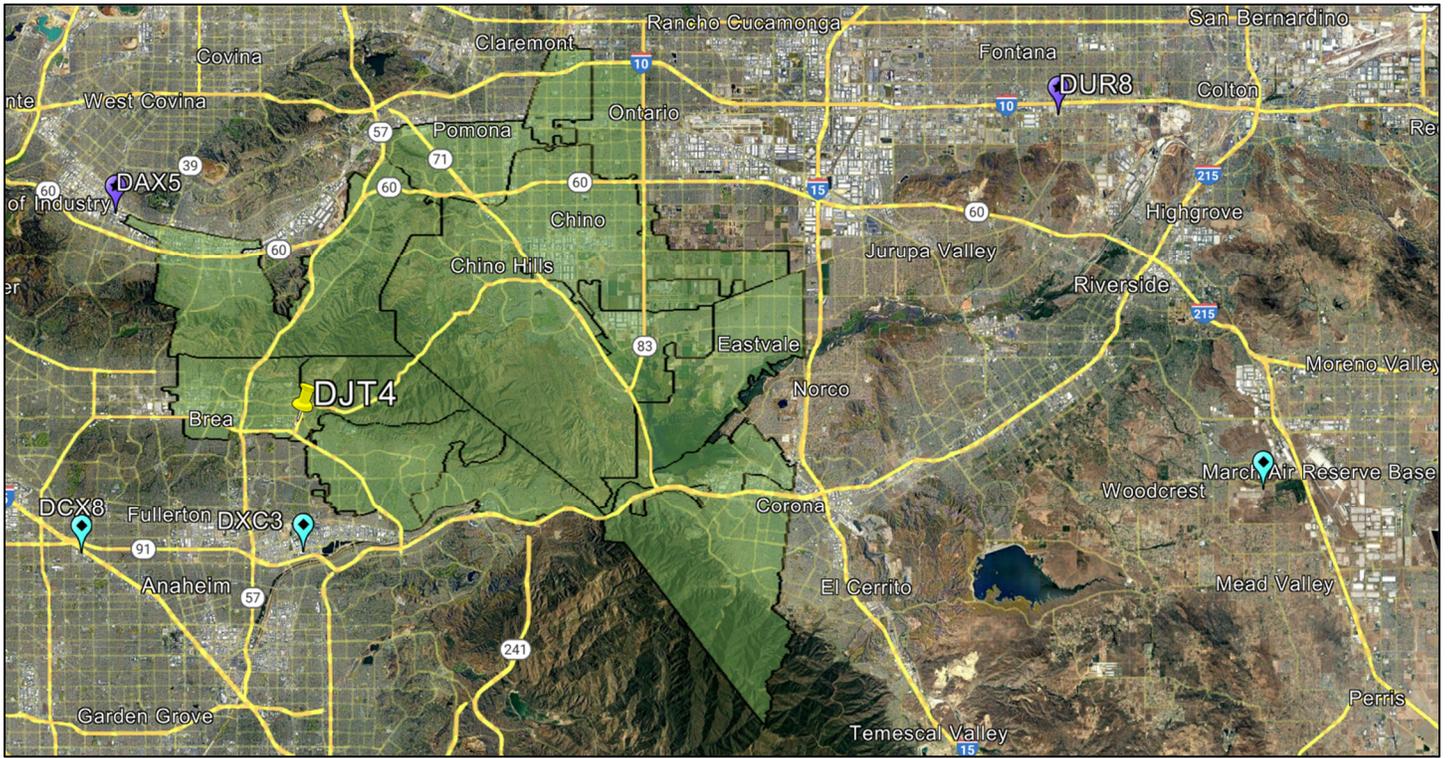

Figure 1: Vicinity Map

The expected service area for the Project is shown in Figure 2. The Project will absorb some of the deliveries from the following existing delivery stations listed below and identified on Figure 2:

DAX5	15930 Valley Blvd, City of Industry, CA 91744
DCX8	1256 N Magnolia St, Anaheim, CA 92801
DJT6	20920 Krameria Ave, March Air Reserve Base, CA 92518

DXC3	3370 E La Palma Ave, Anaheim, CA 92806

Figure 2: Service Area Map

B. Analysis Guidelines

State Requirements

The California Environmental Quality Act known as CEQA was established in 1970 and identified transportation impacts to be analyzed based on delay, using level of service (LOS). In 2013, Governor Brown signed Senate Bill (SB) 743 to better align CEQA with State policies that promote public health, improve air quality, encourage infill development, promote multimodal transportation, and help reduce greenhouse gas emissions to achieve climate action goals.

In 2018, the Governor's Office of Planning and Research (OPR) specified that the VMT methodology was to replace the LOS methodology for analyzing transportation impacts under CEQA. In January 2019, the Natural Resources Agency and the Governor's Office of Planning and Research (OPR) codified SB 743 into the Public Resources Code (PRC) and the State CEQA Guidelines. As of July 1, 2020, transportation impacts under CEQA are no longer analyzed using LOS and instead use the VMT metric.

Section 15064.3 of the CEQA Guidelines states that "a lead agency has discretion to choose the most appropriate methodology to evaluate a project's vehicle miles traveled, including whether to express the change in absolute terms, per capita, per household or in any other measure. A lead agency may use models to estimate a project's vehicle miles traveled, and may revise those estimates to reflect professional judgment based on substantial evidence. Any assumptions used to estimate vehicle miles traveled and any revisions to model outputs should be documented and explained in the environmental document prepared for the project."

Local Requirements

The TIA Guidelines were utilized in the development of this analysis. It provides that, for purposes of SB743 compliance, a VMT analysis should be conducted for land use projects, as deemed necessary by the City, and applies to projects that have the potential to increase the baseline VMT per service population (e.g. population plus employment) for the City. As discussed below, there is both a screen level review for certain projects, as well as a more detailed VMT assessment for developments that are not screened out from further project-specific level review. In this case, the more comprehensive VMT assessment was performed for the Project.

C. Project Trip Generation

Delivery stations are the last mile connection between the tenant's fulfillment process and their customers. Packages are transported to delivery stations via line-haul (tractor trailer) trucks from nearby fulfillment and sortation centers and are further sorted, organized, and loaded into delivery vehicles. Delivery stations operate 24/7 to support delivery of packages to customer locations between 10:00 AM and 9:00 PM. The operations are designed to minimize the potential for traffic impacts during rush hour periods.

The delivery van departure window is designed to minimize impact on rush hour periods. The first wave of delivery drivers arrive at the delivery station around 9:20 AM and begin queuing for loading. Starting at 9:50 AM and ending at 11:10 AM, 345 delivery vans will load and depart from the delivery station at a rate of up to 90 vans per 20 minutes to facilitate a regulated traffic flow into the surrounding area. The first wave of delivery vans leaves at 10:10am. The final wave of delivery vans leaves the facility at 11:10 AM. Approximately 8-10 hours after dispatch, delivery routes are completed, and the vans return to the station between 8:10 PM and 9:50 PM. The drivers park all delivery vans onsite and depart using a personal vehicle or other mode of transport.

For the Project, approximately 31 line-haul trucks are expected to deliver packages to the Project Site each day. The line haul trucks will primarily arrive at the Project Site between the hours of 10:00 PM and 8:00 AM. Line haul trucks enter the Project Site via Nasa Street and Surveyor Avenue on the west side of the building. Once the line haul trucks are unloaded, the trucks continue to the next delivery station and do not return to the Project Site. The customer packages are sorted by address groupings, assigned to the delivery routes, placed onto movable racks, and staged for dispatch.

The delivery station will also use private carriers (primarily individual passenger vehicles) to deliver packages from this location. The tenant anticipates 97 passenger vehicles entering the facility staggered between 4:30 PM and 6:00 PM. Private carrier vehicles will load and depart every 15 minutes. They will not return to the station that same day. Table 1 shows the anticipated traffic volume by vehicle type.

Table 1: Project Trip Generation

Traffic	Number of Vehicles	Daily Trips
Auto - Employees	576	1,152
Delivery Vans	345	690
Auto – Flex Private carrier	97	194
Line-Haul Trucks	31	62
Total	1,049	2,098

Based on Tenant Specified Schedule provided in Attachment A. Note that no adjustments have been made to the numbers to account for passenger equivalency of line-haul trucks.

D. Screening Criteria

The TIA Guidelines provides three types of screening criteria that may be applied to effectively screen projects from a project-level assessment. The screening criteria are broken into the following three steps:

- Step 1: Transit Priority Area (TPA) Screening
- Step 2: Low VMT Area Screening
- Step 3: Project Type Screening

TPA Screening

Per the TIA Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing “major transit stop”¹ or an existing stop along a “high-quality transit corridor”²) may be presumed to have a less than significant impact absent substantial evidence to the contrary.

However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the City;
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the City of Brea, with input from the Southern California Associations of Governments [SCAG]; or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

The project site is not located within ½ mile of an existing major transit stop, or along a high-quality transit corridor. Therefore, the TPA screening criteria is not met.

Low VMT Area Screening

As noted in the TIA Guidelines, “Residential and office projects located within a low VMT-generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, other employment-related and mixed-use land use projects may qualify for the use of screening if the project can reasonably be expected to generate VMT per resident, per worker, or per service population that is similar to the existing land uses in the low VMT area.” The Screening Tool uses the Orange County Transportation Analysis Model (OCTAM) travel forecasting model to measure VMT performance within the North Orange County area for individual traffic analysis zones (TAZ’s). The project’s physical location based on APN is input into the Screening Tool to determine the VMT generated within the respective TAZ as compared to the jurisdictional average inclusive of a particular threshold (e.g., 15% below the City average are designated as Low VMT areas). A project confirmed to be within a low VMT area, should have land use assumptions verified to ensure consistency with the travel demand model’s TAZ used to measure VMT performance.

According to the City of Brea Low VMT Areas Map provided in Attachment B, the Project is located in an area that exceeds the local VMT average. Therefore, the Low VMT Area screening criteria is not met.

Project Type Screening

The TIA Guidelines provide that some project types have been identified as having the presumption of a less than significant impact. Such projects include: local parks; local serving retail use less than 50,000 square feet; community institutions; affordable, supportive, or transitional housing; and project generating less than 110 daily vehicle trips.

The BofA was a general office building that, according to ITE Trip Generation, 11th Ed., 2021, would have had a daily trip generation of 4,818 trips (assuming 1447 employees). The Project will generate 2,098 trips per day, which is fewer than the existing Bank of America site; therefore the differential number of trips would qualify as “less than 110 daily trips.” However, for informational purposes this report provides a VMT analysis notwithstanding the applicable screening criteria. Table 2 summarizes the screening criteria evaluation for the Project.

Table 2: Project Screening

Project Type	Criteria Met
Transit Priority Area Screening	NO
Low VMT Area Screening	NO
Project Type Screening	YES*

Source: City of Brea TIA Guidelines, September 2020

*See discussion above regarding project-level screening

E. VMT Assessment Methodology

The TIA Guidelines provides that project-level analysis shall include a VMT analysis and forecasting through the OCTAM model to determine if the project has a significant VMT impact. The TIA Guidelines state that the analysis shall include both ‘project generated VMT for the project TAZ (or TAZs) and ‘project effect on VMT’ estimates under the four scenarios listed below:

- Baseline conditions
- Baseline plus project
- Cumulative no project
- Cumulative plus project

Baseline

The Project Site currently contains a vacant 637,503 square foot leasable building. Since the space is currently vacant, traffic from the vacant building was not included in the actual traffic counts conducted as part of the traffic impact assessment for the Project. However, for purposes of determining the existing baseline condition pursuant to California Environmental Quality Act (CEQA) Guidelines, Section 15125, trips attributable to the currently unoccupied building on the Project Site are imputed. The existing baseline conditions for the purposes of this study therefore includes the trips from the vacant (prior Bank of America) office building. The BofA office tenant was in operation from approximately June 1997 until December 2022. An application for the Project was submitted in 2022 and the City released a Notice of Preparation (NOP) for the Project on July 13, 2023. An occupancy assumption is consistent with OCTAM’s regional traffic modeling, which assumes occupancy of existing/entitled square footage. It is also consistent with the City’s determination of the existing baseline because the currently vacant BofA building on the Project Site could be occupied at anytime without a discretionary action by the City. For these reasons, occupancy of the currently vacant square footage of the BofA building is assumed in determining the existing baseline.

The City, in concert with other north Orange County communities, commissioned the North Orange County Collaborative VMT Traffic Study Screening Tool (NOCC+ Screening Tool). The NOCC+ Screening Tool extracts the average trip length from the OCTAM 5.0 model for a specific land use type within a TAZ. For TAZ 61 where the Project Site is located, the average trip length is 8.9 miles for the office workers who previously occupied the BofA building.

Due to inherent limitations of the NOCC+ Screening Tool, it does not accurately produce VMT outputs for either the vacant BofA building or the Project. Therefore, this study relies on Institute of Transportation Engineers trip generation rates, and verifiable employee numbers from City records, to calculate the number of trips attributable to the BofA building.

The BofA building is 637,503 sq. ft. According to City records, the building operated with at least 1447 employees. As mentioned in the previous section, the expected daily trip generation for the BoA building is 4,818 trips. Table 3 shows the trip generation for the BofA building.

Table 3: Bank of America (Prior Use) Trip Generation

Land Use	Number of Employees ¹	Avg. Rate / Person ²	Daily Trips
General Office (Land Use Code 710)	1,447	3.33 trips/person	4,818

¹ From City of Brea historical records, and other sources, actual employee population for Bank of America has been purported to be over 2000 employees

² Average trip rate used per person was lower than the ITE Trip Generation fitted curve equation, which equates to a more conservative number of trips.

If the number of trips (4,818) from the BofA building is multiplied by the average trip length (8.9 miles) used in the NOCC+ Screening Tool, the total VMT for the BofA building is 42,880 VMT per day or 29.63 VMT per service population. A copy of the NOCC+ Screening Tool output for the baseline conditions, including assumptions for the BofA building, is in Attachment C.

F. VMT Impact Thresholds

Per the TIA Guidelines, a project that does not meet the screening criteria shall complete a VMT analysis to determine if there is a significant impact. The VMT significance criteria as stated in the TIA Guidelines is detailed below.

- A project would result in a significant project-generated VMT impact if either of the following conditions are satisfied:
 - The baseline or cumulative project-generated VMT per service population exceeds the City of Brea General Plan Buildout VMT per service population, or
- The project's effect on VMT would be considered significant if it resulted in either of the following conditions to be satisfied:
 - The baseline or cumulative link-level boundary Citywide VMT per service population increases under the plus project condition compared to the no project condition.

Please note that the cumulative, no-project scenario reflects the adopted Regional Transportation Plan/Sustainable Community Strategy (RTP/SCS), as such, if a project is consistent with the RTP/SCS, then the cumulative (project effect on VMT) shall be considered less than significant. NV5 understands that the Project is consistent with the adopted RTP/SCS, and therefore the cumulative impacts of the Project are considered to be less than significant.

Further, project effect on VMT is only studied when a project is inconsistent with the City of Brea General Plan (City of Brea TIA Guidelines, Footnote No, 6). NV5 understands that a review of General Plan consistency was conducted by City staff and the Project was found to be consistent with the General Plan. Therefore, no further analysis of project effect on VMT is provided in this report.

G. VMT Analysis for the Project

There are four types of vehicle trips associated with operation of the Project:

- Auto - Employees commute trips
- Delivery vans
- Auto - Personal delivery vehicles (Flex Private carrier)
- Line-haul trucks

Section 15064.3(a) of the CEQA Guidelines describes specific considerations for evaluating a project's transportation impacts, and states that, "[f]or purposes of this section 'vehicle miles travelled' refers to the amount and distance of automobile travel attributable to a project. The California Institute of Transportation Engineers (ITE) prepared the Institute of Transportation Engineers Guide to SB743 (April 2021), incorporated by reference herein, to assist local agencies with VMT analysis. It states that SB 743 does not apply to goods movement (i.e., trucks) and therefore the VMT associated with the movement of goods does not need to be analyzed or mitigated in the determination of transportation impacts. Accordingly, this report does not consider the line-haul truck trips associated with the Project in VMT calculations.

The total VMT for the Project Site is the sum of the different vehicle types (except line-haul trucks). The methodology and assumptions for determining the VMT for each vehicle type other than line-haul trucks are provided below.

Auto - Employee Commuter Trips

The analysis assumes that employees will live within a reasonable commuting distance of the Project Site and likely follow the same trends as those that are now employed within the same area. Using the OCTAM 5.0 model, the estimated VMT for employees who work in the traffic analysis zone TAZ Zone 61 is 20.9 vehicle-miles each way or 41.8 vehicle-miles per day. The model indicates that in the future, the VMT for employees in TAZ Zone 61 will decrease and have a resulting VMT of 40.7 vehicle-miles per day. These OCTAM model statistics are based on the model updated on March 9, 2022. For the purposes of this report, and to be conservative, the higher average employee VMT of 41.8 miles per day is used.

$$\text{EMP_VMT} = (\text{Number of Employees} * \text{Average Employee VMT})$$

The EMP_VMT is $576 * 41.8 = 24,076$ vehicle miles per day.

Delivery Van Trips

The Project tenant delivers packages to zones much like the U.S. Postal Service, except that the routes the vans take vary by day and are optimized for the most efficient movement. This report estimates the VMT for delivery vehicles by finding the distance from the Project Site to the furthest point within the delivery zone and multiplying by the number of vehicles bound for those zones. The furthest point within the zone is assumed to account for circuitous travel as packages are dropped

off throughout a route. Note: not every van will travel to the furthest point within a zone). The total number of delivery vans is shown in Table 1.

All of the customers that would be served by the Project are currently being served by an existing delivery station. The Project would absorb some of the service areas that are currently covered by five other delivery stations, thereby reducing the distance traveled by delivery vans across all facilities. In other words, the tenant is adding a delivery station closer to its existing customers, which would reduce overall VMT. The zip codes of the five existing delivery stations that would have a reduced amount of delivery trips are 92518, 92806, 91744, 92316, and 92801.

Most delivery trips are within 10 to 20 miles of the delivery stations. Since all vans leave the site and then return, the VMT would be doubled to account for the return trip. The existing VMT for deliveries servicing the existing customers is calculated in the following manner:

$$\text{Van_VMT}_{\text{ex}} = \sum (\text{Current Van Trips to Zip Code} * \text{Dist. To Zip Code} * 2)$$

The VMT associated with the existing delivery stations in the zip codes noted above is 13,416 miles per day. The future van VMT is calculated in a similar manner:

$$\text{Van_VMT}_{\text{future}} = \sum (\text{Future Van Trips to Zip Code} * \text{Dist. To Zip Code} * 2)$$

With the addition of the Project, the two-way VMT is 12,506 miles per day. Hence, development of the Project would result in 910 fewer delivery van VMT per day across all facilities. This is the goal the tenant is seeking: to put its delivery operations closer to its customers by opening new delivery stations without closing existing ones and thereby reducing overall miles traveled.

Auto – Personal Delivery Vehicles (Flex Private Carrier) Trips

Private carrier trips are made by private contractors who deliver packages in their own automobiles. These individuals, called Flex vehicles, are managed via a mobile application which instructs them when to arrive at the delivery station and how many packages they will be delivering. They are routed from the site to their delivery zones in the same manner as the delivery vans. The primary difference is that the private carrier vehicles do not return to the delivery station. Many private carrier drivers work for ride sharing companies or are professional drivers, but some are independent drivers who work at some location nearby and deliver some packages after their day shift before heading home.

The delivery zones for the Flex private carriers are the same as the delivery zones for the delivery vans. The methodology for determining VMT is similar, except that because the private carrier vehicles do not return to the delivery station, the VMT is not doubled. The existing VMT for private carriers servicing the existing customers is calculated in the following manner:

$$\text{FLEX_VMT}_{\text{ex}} = \sum (\text{Current FLEX Trips to Zip Code} * \text{Dist. To Zip Code}).$$

The existing private carrier VMT is 1,886 per day. Similarly, the future VMT for the Project Site is calculated thusly:

$$\text{FLEX_VMT}_{\text{future}} = \sum (\text{Future FLEX Trips to Zip Code} * \text{Dist. To Zip Code}).$$

The future daily VMT for the private carrier operations associated with the Project is 1,758 per day. Thus, there will be 128 fewer Flex private carrier VMT per day across all facilities.

Total Site VMT

The total existing VMT associated with current operations at the five existing delivery stations does not include new employee trips because those employees are static and will not be replaced. That is, Project will have its own employees, which will not be taken from the current employment of the surrounding delivery stations. Therefore the existing total VMT is as follows:

$$\text{Total_VMT}^{\text{ex}} = \text{Van_VMT}^{\text{ex}} + \text{FLEX_VMT}^{\text{ex}}$$

The total existing delivery station operations VMT is $13,416 + 1,886 = 15,302$ VMT per day.

The future total VMT for the Project, including employee trips, is calculated as follows:

$$\text{Total_VMT}^{\text{future}} = \text{EMP_VMT} + \text{Van_VMT}^{\text{future}} + \text{FLEX_VMT}^{\text{future}}$$

The total future VMT for the Project is $24,076 + 12,506 + 1,758 = 38,340$ VMT per day.

The VMT calculations are summarized in Table 4 below. The results show that the VMT generated by the Project is less than the VMT in the Existing Baseline condition that includes VMT from the existing BofA building. Therefore, there is no increase in VMT as a result of the Project.

Table 4: Project VMT Results

Traffic	Personnel Count	Daily Trips	Prior Daily VMT	New Site Daily VMT	Diff. between New Use and Prior Use Daily VMT
Previous Land Use					
Bank of America Bldg	1447²	4,818	42,880	0	-42,880
Delivery Station					
Personal Vehicle	576	1,152	0	24,076	24,076
Delivery Vans	n/a ¹	690	13,416	12,506	-910
FLEX	97	194	1,886	1,758	-128
Total Delivery Station	673	2,036	15,302	38,340	23,038
Differential VMT					-19,842

¹Delivery van personnel count is 345. The driver's personal trip count is included in the personal vehicle value for the purpose of determining service population.

²From City of Brea historical records. Actual employee population for Bank of America has been purported to be over 2000 employees.

It is noteworthy that the tenant's delivery stations are placed within the company's larger delivery network to consolidate deliveries in smaller geographic areas. The addition of a delivery station results in a reduction of delivery VMT in the region, which partially offsets any new employee home-based work trips. Also, note that, if the regional offset of VMT were not considered, the delivery station would produce 4,540 fewer VMT than the BofA site did when it operated with 1,447 employees.

H. Transportation Demand Management (TDM)

While TDM is not required for the Project because the VMT will be less than significant, the proposed tenant often incorporates certain travel reducing measures into its buildings. Even though transit options at the Project Site are somewhat limited, some of the other benefits offered to the tenant's employees and, in some cases, to its contractors include:

- Guaranteed Ride Home programs – Ride-share and taxi rides for employees only who carpool but need to leave work unexpectedly
- Carpool program promotions – typically Waze Carpool unless there is a local alternative
- Carpool parking – designated preferred parking spaces for carpool vehicles
- Bike racks / employee lockers
- Showers
- A designated employee transportation coordinator

Re: Record Search Results for the Amazon Parcel Delivery Facility Project

The South Central Coastal Information Center received your records search request for the project area referenced above, located on the Yorba Linda, CA USGS 7.5' quadrangle(s). The following summary reflects the results of the records search for the project area and a ½-mile radius. The search includes a review of all recorded archaeological and built-environment resources as well as a review of cultural resource reports on file. In addition, the California Points of Historical Interest (SPHI), the California Historical Landmarks (SHL), the California Register of Historical Resources (CAL REG), the National Register of Historic Places (NRHP), and the California State Built Environment Resources Directory (BERD) listings were reviewed for the above referenced project site and a ½-mile radius. Due to the sensitive nature of cultural resources, archaeological site locations are not released.

RECORDS SEARCH RESULTS SUMMARY

Archaeological Resources* (*see Recommendations section)	Within project area: 0 Within project radius: 11
Built-Environment Resources	Within project area: 0 Within project radius: 1
Reports and Studies	Within project area: 0 Within project radius: 20
OHP Built Environment Resources Directory (BERD) 2022	Within project area: 0 Within ¼-mile radius: 0
California Points of Historical Interest (SPHI) 2022	Within project area: 0 Within ¼-mile radius: 0
California Historical Landmarks (SHL) 2022	Within project area: 0 Within ¼-mile radius: 0
California Register of Historical Resources (CAL REG) 2022	Within project area: 0 Within ¼-mile radius: 0
National Register of Historic Places (NRHP) 2022	Within project area: 0 Within ¼-mile radius: 0

Archaeological Determinations of Eligibility (ADOE): 2022	Within project area: 0 Within project radius: 0
------------------------------------------------------------------	----------------------------------------------------

HISTORIC MAP REVIEW - Anaheim, CA (1896, 1942) 15' USGS historic maps indicate that in 1896 there was no visible development within the project area. There were two roads within the project search radius. The historic place name of Placentia was located nearby. In 1942, there was still no visible development within the project area. There were a few roads and buildings within the project search radius. Major road names included Brea Olinda Boulevard, Valencia Avenue and Carbon Canyon Road. The Pacific Electric rail line ran south of the project area. Also of note was an oil field in the northern portion of the project search radius.

RECOMMENDATIONS

**When we report that no archaeological resources are recorded in your project area or within a specified radius around the project area; that does not necessarily mean that nothing is there. It may simply mean that the area has not been studied and/or that no information regarding the archaeological sensitivity of the property has been filed at this office. The reported records search result does not preclude the possibility that surface or buried artifacts might be found during a survey of the property or ground-disturbing activities.*

There are several recorded prehistoric and historic resources within the vicinity of the project area. According to our records, the project location does not appear to have been previously surveyed for the presence of cultural resources. The project location is potentially sensitive for archaeological resources. However, because most of the project area is obscured by urban development, an archaeological survey is not likely to result in the observation of surface artifacts. Therefore, it is recommended that a qualified archaeologist be retained to monitor all ground-disturbing activities. In the event that cultural resources are observed, all work within the vicinity of the find should be diverted until the archaeologist can assess and record the find and make recommendations. Excavation or removal of potential cultural resources should not be attempted by project personnel. It is also recommended that the Native American Heritage Commission be consulted to identify if any additional traditional cultural properties or other sacred sites are known to be in the area. The NAHC may also refer you to local tribes with particular knowledge of potential sensitivity. The NAHC and local tribes may offer additional recommendations to what is provided here and may request an archaeological monitor.

For your convenience, you may find a professional consultant**at www.chrisinfo.org. Any resulting reports by the qualified consultant should be submitted to the South Central Coastal Information Center as soon as possible.

**The SCCIC does not endorse any particular consultant and makes no claims about the qualifications of any person listed. Each consultant on this list self-reports that they meet current professional standards.

If you have any questions regarding the results presented herein, please contact the office at 657.278.5395 Monday through Thursday 9:00 am to 3:30 pm. Should you require any additional information for the above referenced project, reference the SCCIC number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the [California Historical Resources Information System](#),

Enclosures:

(X) Invoice #24767.11227

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the California Historical Resources Information System (CHRIS) Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

The California Office of Historic Preservation (OHP) contracts with the California Historical Resources Information System's (CHRIS) regional Information Centers (ICs) to maintain information in the CHRIS inventory and make it available to local, state, and federal agencies, cultural resource professionals, Native American tribes, researchers, and the public. Recommendations made by IC coordinators or their staff regarding the interpretation and application of this information are advisory only. Such recommendations do not necessarily represent the evaluation or opinion of the State Historic Preservation Officer in carrying out the OHP's regulatory authority under federal and state law.

Re: Native American Tribal Consultation, Pursuant to the Assembly Bill 52 (AB 52), Amendments to the California Environmental Quality Act (CEQA) (Chapter 532, Statutes of 2014), Public Resources Code Sections 5097.94 (m), 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2 and 21084.3, Amazon.com Services LLC Parcel Delivery Facility Project, Orange County

Dear Ms. Newton:

Pursuant to Public Resources Code section 21080.3.1 (c), attached is a consultation list of tribes that are traditionally and culturally affiliated with the geographic area of the above-listed project. Please note that the intent of the AB 52 amendments to CEQA is to avoid and/or mitigate impacts to tribal cultural resources, (Pub. Resources Code §21084.3 (a)) ("Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.")

Public Resources Code sections 21080.3.1 and 21084.3(c) require CEQA lead agencies to consult with California Native American tribes that have requested notice from such agencies of proposed projects in the geographic area that are traditionally and culturally affiliated with the tribes on projects for which a Notice of Preparation or Notice of Negative Declaration or Mitigated Negative Declaration has been filed on or after July 1, 2015. Specifically, Public Resources Code section 21080.3.1 (d) provides:

Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section.

The AB 52 amendments to CEQA law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction prior to receiving requests for notification of projects in the tribe's areas of traditional and cultural affiliation. The Native American Heritage Commission (NAHC) recommends, but does not require, early consultation as a best practice to ensure that lead agencies receive sufficient information about cultural resources in a project area to avoid damaging effects to tribal cultural resources.

The NAHC also recommends, but does not require that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

- A listing of any and all known cultural resources that have already been recorded on or adjacent to the APE, such as known archaeological sites;
- Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
- Whether the records search indicates a low, moderate, or high probability that unrecorded cultural resources are located in the APE; and
- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

- Any report that may contain site forms, site significance, and suggested mitigation measures.

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code section 6254.10.

3. The result of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our consultation list remains current.

If you have any questions, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst

June 8, 2023

RE: Delivery Facility at 275 Valencia Avenue, City Brea, Orange County, California 92823

To Whom It May Concern:

The City of Brea is the lead agency for a proposed project that is subject to the California Environmental Quality Act (CEQA). The proposed Amazon.com LLC Parcel Delivery Facility project is located in the City of Brea in Orange County and consists of a 31.52-acre parcel (Assessor Parcel Numbers 320-233-17 & 320-301-12) in the Orange County South USGS 7.5' Quadrangle, Township 4 South, Range 9 West (see enclosed map). The Environmental Impact Report (EIR) has begun for this project with a Notice of Preparation is anticipated to be submitted in the near future.

Project Description

The project site is currently occupied by an existing three-story (60 feet) office building containing approximately 637,503 sf of floor area and a 1,952-stall surface parking lot. The Project proposes the demolition of the existing office building and construction of a new 181,500 square foot, single-story warehouse building with ancillary office space at the front intended to serve as a parcel delivery facility for Amazon, along with a remodeled surface parking lot. Proposed entitlements consist of a Vesting Tentative Parcel Map and Plan Review.

A Sacred Lands File (SLF) conducted through the Native American Heritage Commission for the above-listed project was negative.

Your tribe has notified the City of Brea pursuant Public Resources Code Section 21080.3.1(b) that the City is within the geographic area with which the tribe is traditionally and culturally affiliated. To ensure compliance with Assembly Bill 52 (Chapter 532, Statutes of 2014), we are asking if you have any knowledge of cultural resources within the project vicinity or if you would like to request consultation with the City of Brea regarding the proposed project. If the tribe wishes to consult with the City of Brea about cultural resources in the project vicinity, please request a consultation using the contact information below within 30 days of the date of this letter, by July 10, 2023.

The Initial Study process for the proposed project has just begun and it is anticipated that a Mitigated Negative Declaration will be completed for the project.

If you require any additional information or have any questions, please contact me at (714) 671-4439 or via e-mail at JessicaN@cityofbrea.net. Thank you for your assistance.

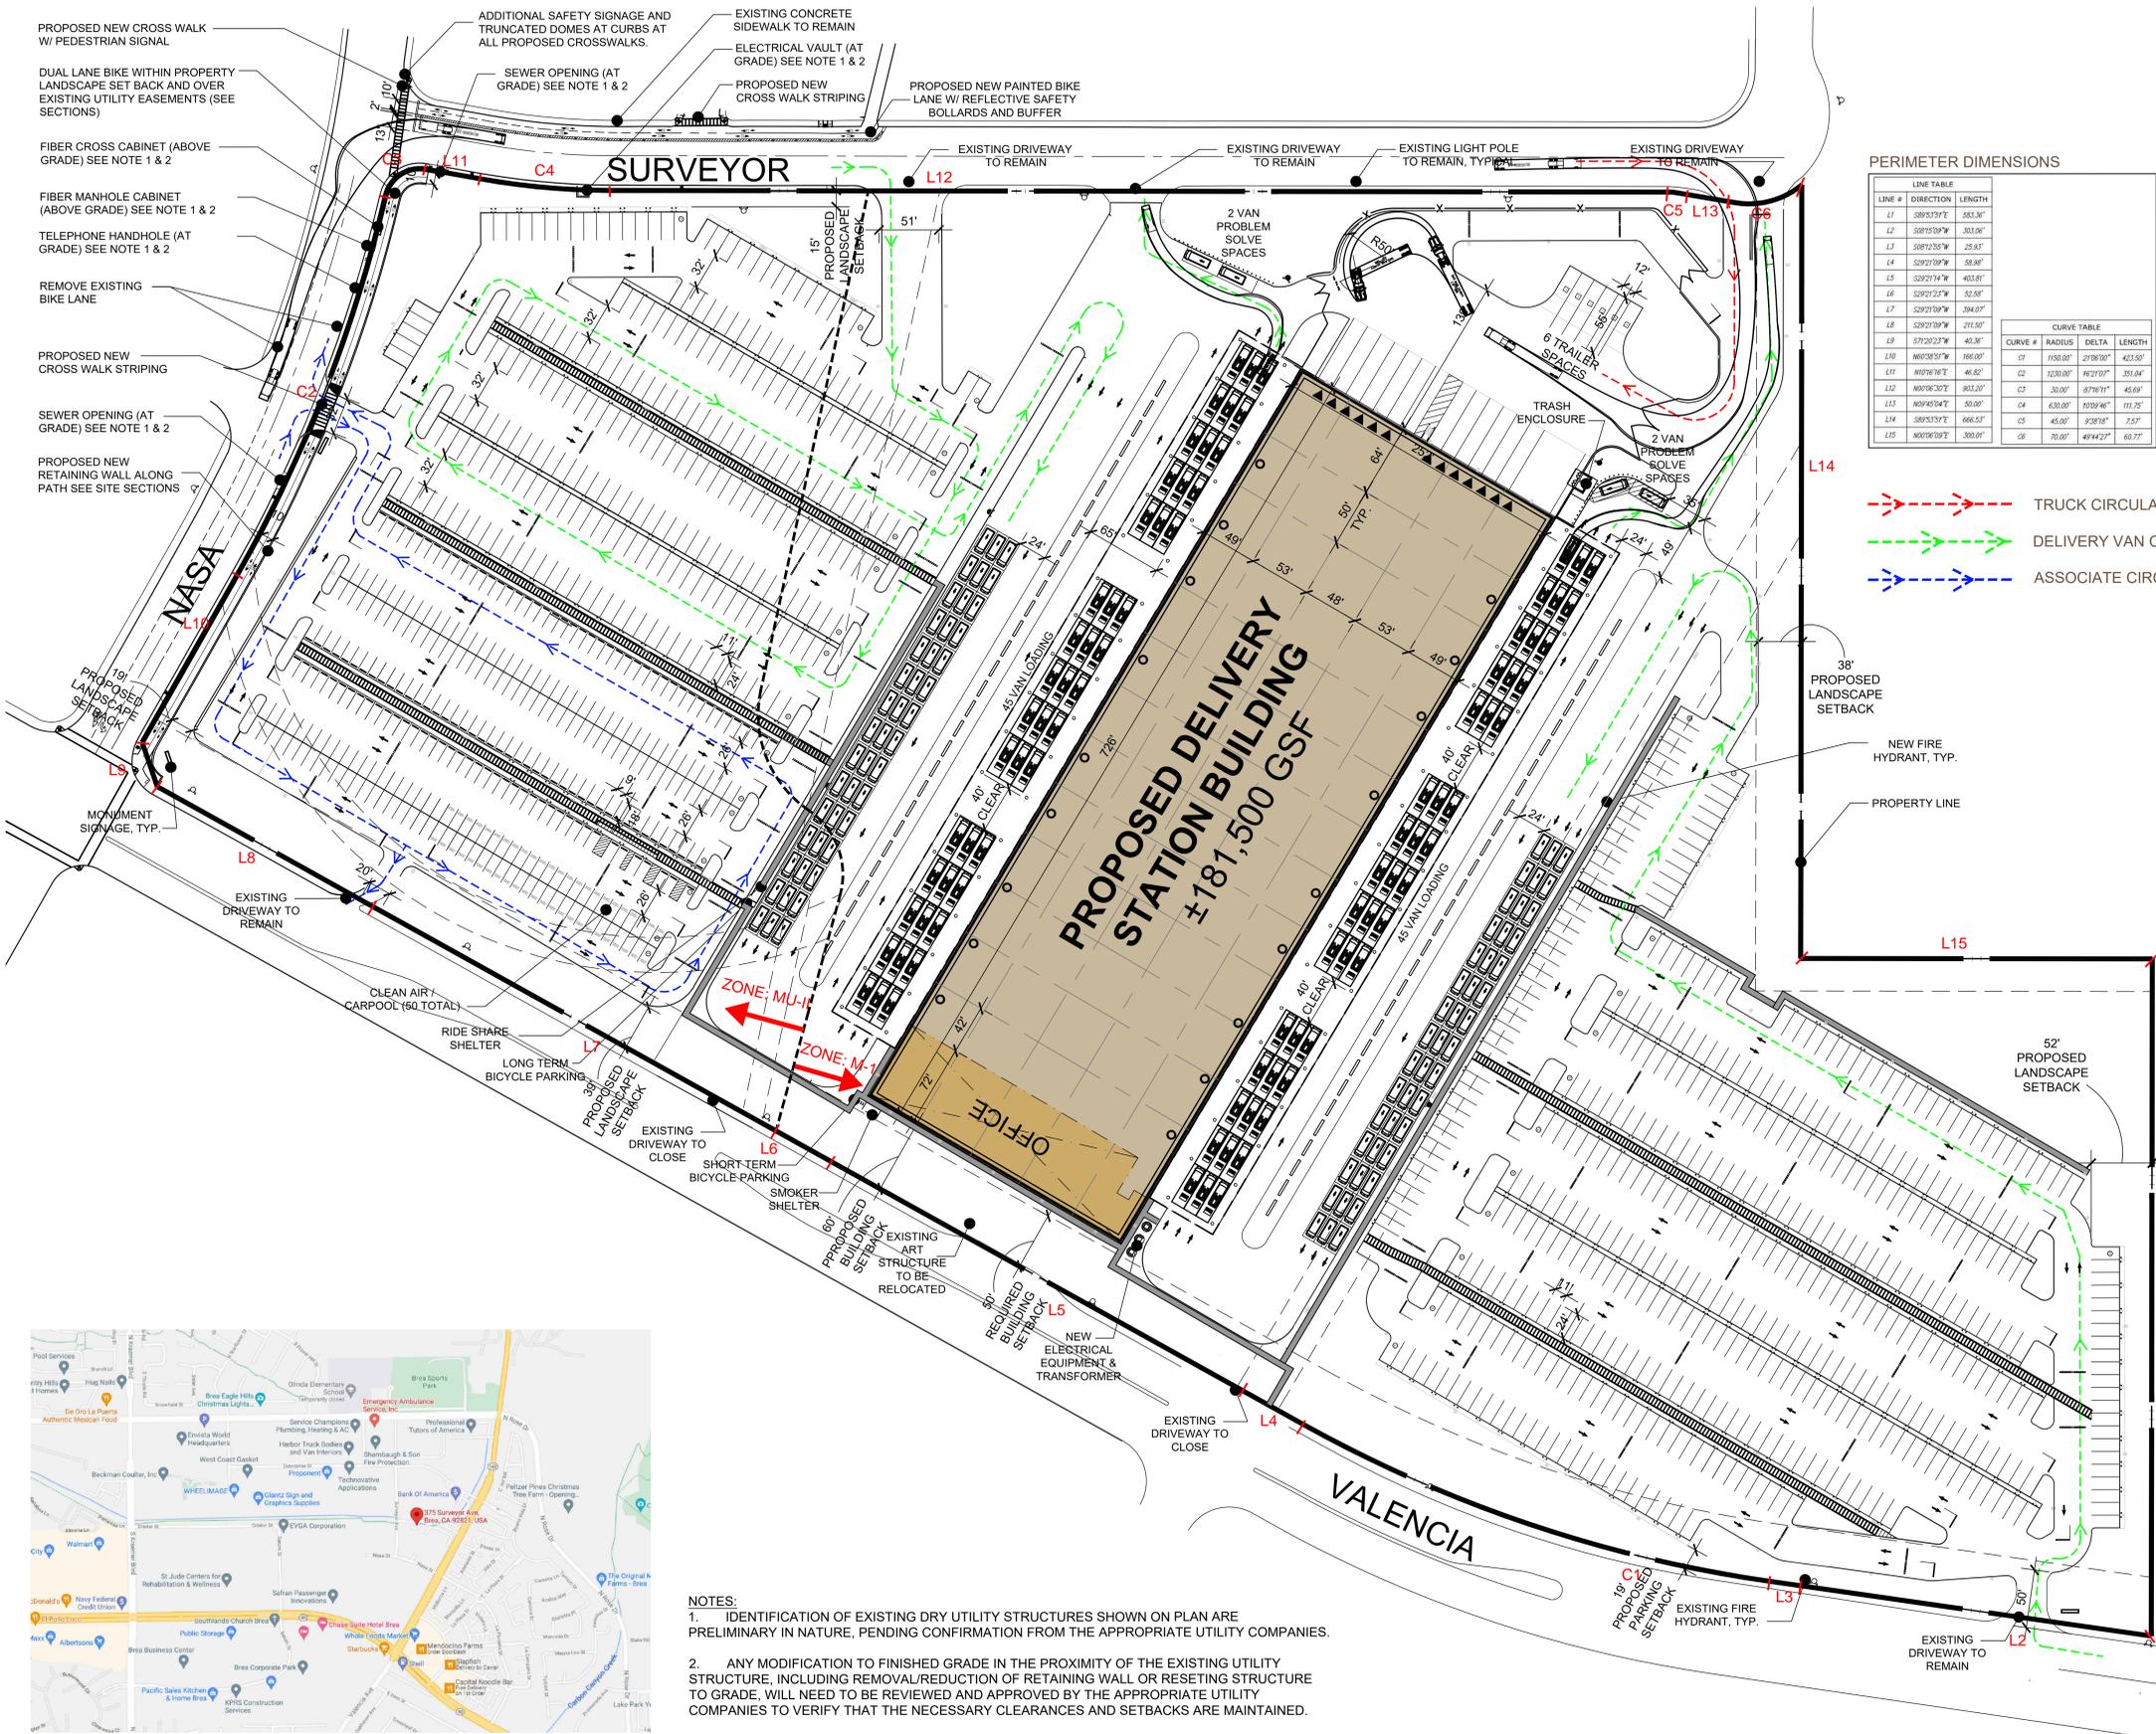

Sincerely,

Jessica Newton

RE: Delivery Facility at 275 Valencia Avenue, City Brea, Orange County, California 92823- Final Mitigation Measures

To Chairperson Salas:

Consistent with the tribal and cultural resources mitigation measures emailed and agreed upon in August 8, 2023 email correspondence, please see the final mitigation measures for the proposed Amazon Parcel Delivery Facility Project, which includes entitlements to facilitate construction of a new 181,500 square foot single-story parcel delivery facility building at 275 Valencia Avenue.

MM-TCR-1 Prior to commencement of any ground disturbing activity at the Project site, the Applicant shall retain a Native American Monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation – the tribe that consulted on this project pursuant to Assembly Bill 52 (the “Tribe” or the “Consulting Tribe”), and in concurrence with the City of Brea as the CEQA lead agency. A copy of the executed contract shall be submitted to the City of Brea Planning and Building Department prior to the issuance of any permit necessary to commence a ground-disturbing activity. The tribal monitor will only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the project area. The Tribal monitor will complete daily monitoring logs that will provide descriptions of the day’s activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when all ground-disturbing activities on the Project Site are completed, or when the Tribal representatives and Tribal monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources. Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by project activities shall be evaluated by the qualified archaeologist and Tribal monitor. If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance shall immediately

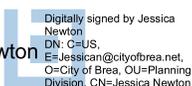

cease within 100 feet of discovery, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project Site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]). If a non-Native American resource is determined by the qualified archaeologist to constitute a “historical resource” or “unique archaeological resource,” time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation, must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Sections 21083.2(b) for unique archaeological resources.

Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

MM-CUL-1: Discovery of Cultural Resources: If cultural resources are encountered during ground disturbing activities, work in the immediate area shall cease and an archaeologist meeting the Secretary of the Interior’s Professional Qualifications Standards for archaeology (National Park Service) [NPS] 1983 shall be contacted immediately to evaluate the find(s). If the discovery proves to be significant as determined by the site archaeologist, additional work such as data recovery excavation may be warranted and will be reported to the City.

Please kindly submit a closure letter if the Tribe is in agreement with the mitigation measures outlined in this memorandum. Do not hesitate to contact me at (714) 671-4439 or via e-mail at JessicaN@cityofbrea.net. Thank you for your assistance.

Sincerely,

RE: Amazon Delivery Facility at 275 Valencia Avenue, City Brea, Orange County, California 92823 - AB 52 Tribal Consultation: Updated Final Mitigation Measures

To Chairperson Salas:

Per Assembly Bill (AB) 52 provisions, City of Brea (“City”) and Gabrieleno Band of Mission Indians – Kizh Nation (“Tribe”) has conducted tribal and cultural resources consultation (“Consultation”) for the proposed Amazon Parcel Delivery Facility Project (“Project”), which includes entitlements to facilitate construction of a new 181,500 square foot single-story parcel delivery facility building at 275 Valencia Avenue. The Consultation occurred on August 8 and September 19, 2023 via email, and closed on May 9, 2024 with the issuance of the Close-Out Letter (Attachment A). Since then, the City identified the need to update the subject mitigation measures based on the California Historical Resources Information System (CHRIS) search recommendations. As such, Attachment B to this letter includes the updated final mitigation measures for the Project, with additional language to provide an on-site archaeologist during all ground-disturbing activities (Mitigation Measure - Tribal Cultural Resources 2). Please note that the Project will include the two mitigation measures under the tribal cultural resources section of the Project Environmental Impact Report.

This letter with the final tribal cultural resource mitigation measures as provided in the Attachment B, shall conclude the required AB 52 consultation. Please contact me at (714) 671-4439 or via e-mail at JessicaN@cityofbrea.net with any questions. Thank you for your assistance.

Sincerely,

Jessica Newton
Senior Planner

- B- Updated “Tribal Cultural Resources: Mitigation Measures”

**Updated Tribal Cultural Resources: Mitigation Measure
Amazon Parcel Delivery Facility
275 Valencia Avenue**

MM-TCR-1 Prior to commencement of any ground disturbing activity at the Project Site, the Applicant shall retain a Native American Monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation – the tribe that consulted on this project pursuant to Assembly Bill 52 (the “Tribe” or the “Consulting Tribe”), and in concurrence with the City of Brea as the CEQA lead agency. A copy of the executed contract shall be submitted to the City of Brea Community Development Department prior to the issuance of any permit necessary to commence a ground-disturbing activity. The tribal monitor will only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, at the Project Site. The Tribal monitor will complete daily monitoring logs that will provide descriptions of the day’s activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when all ground-disturbing activities on the Project Site are completed, or when the Tribal representatives and Tribal monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources. Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by Project activities shall be evaluated by the qualified archaeologist and Tribal monitor. If the resources are Native American in origin, the Consulting Tribe will retain tribal cultural resources in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance shall immediately cease within 100 feet of discovery, and the county coroner shall be notified per Public Resources Code Section (PRC) 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California PRC Section 5097.98(d)(1) and (2). Work may continue on other parts of the Project Site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5(f)). If a non-Native American resource is determined by the qualified archaeologist to constitute as a “historical resource” or “unique archaeological resource,” time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation, must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Section 21074(b) for unique archaeological resources.

Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

MM-TCR-2: Discovery of Cultural Resources (not Native American in origin): Prior to commencement of any ground disturbing activity at the Project Site, the Applicant shall retain an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for A (National Park Service) [NPS] 1983. If cultural resources that are not Native American in origin are encountered during ground disturbing activities, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. If the discovery proves to be significant as determined by the site archaeologist, additional work such as data recovery excavation may be warranted and will be reported to the City.

**APPENDIX H.1:
AIR QUALITY, GREENHOUSE GAS EMISSIONS,
ENERGY, AND NOISE ALTERNATIVES
MEMORANDUM**

Subject: DJT4 Parcel Delivery Facility – Project Alternatives Memorandum

PURPOSE

This memorandum documents the results of three Project Alternatives for the DJT4 Parcel Delivery Facility in Brea, California. This memorandum contains an Air Quality and Greenhouse Gas (GHG) Emissions Analysis, Energy Consumption Analysis and a Noise Impact Analysis for each of the three Project Alternatives. The purpose of this assessment is to estimate criteria air pollutants, GHG emissions, energy consumption and noise attributable to the three Project Alternatives provided by the Project Proponent. Pertinent standards and regulations are presented where appropriate.

DESCRIPTION OF PROJECT ALTERNATIVES

The Project proponent has provided three Project alternatives as follows:

1. Alternative 1 considers the impacts of no project, with continued operations of the 637,503 square-foot office, allowed by the general plan land use designation and zoning, with a total of 2,075 employees. This Project Alternative would generate 5,778 auto trips and 36 truck trips according to the Project Alternatives Trip Generation and Vehicle Miles Traveled (VMT) Comparison Report by NV5 Engineers & Consultants (2024a). Construction impacts were not considered for this Project Alternative as it considers operations of the existing building under current conditions. Passenger vehicle and truck trip route distributions used were found in the Project Traffic Impact Assessment prepared by NV5 Engineers & Consultants (2024b). Traffic generated by the Project Alternative was assumed to only influence the roadway segments affected by the Proposed Project.
2. Alternative 2 proposes the demotion of the existing building on the Project Site and would reduce the Project's delivery operations and building square footage by 15 percent. Total building square footage for the delivery facility would be 154,275 square feet (138,848 square feet of merchandise warehouse space and 15,427 square feet of ancillary office space). The total number of employees would be 572. This Project Alternative would generate 1,144 auto trips, 587 van trips and 53 truck trips (NV5 2024a). Alternative 2 was modeled using information provided by the Project proponent for the Proposed Project, assuming that construction and operations were reduced by 15 percent. Traffic generated by the Project Alternative was assumed to only influence the roadway segments affected by the Proposed Project.

3. Alternative 3 would repurpose the existing building on the Project Site to accommodate the proposed delivery facility. The ground floor of the existing building, which is approximately 163,000 square feet, would be utilized as the warehouse space and the remaining 474,503 square feet would be used for office space. The total number of employees would be 2,218. This Project Alternative would generate 5,816 auto trips, 690 van trips and 90 truck trips (NV5 2024a). Traffic generated by the Project Alternative was assumed to only influence the roadway segments affected by the Proposed Project.

AIR QUALITY

Standards of Significance

South Coast Air Quality Management District Regional Thresholds

The significance criteria established by the applicable air quality management or air pollution control district (SCAQMD) may be relied upon to make the above determinations. According to the SCAQMD, an air quality impact is considered significant if a project would violate any ambient air quality standard, contribute substantially to an existing or projected air quality violation, or expose sensitive receptors to substantial pollutant concentrations. The SCAQMD has established thresholds of significance for air quality for construction and operational activities of land use development projects, as shown below.

SCAQMD Regional Significance Thresholds – Pounds per Day		
Air Pollutant	Construction Activities	Operations
Reactive Organic Gas (ROG/VOC)	75	55
Carbon Monoxide (CO)	550	550
Nitrogen Oxide (NO _x)	100	55
Sulfur Oxide (SO _x)	150	150
Coarse Particulate Matter (PM ₁₀)	150	150
Fine Particulate Matter (PM _{2.5})	55	55

Source: SCAQMD 2023

South Coast Air Quality Management District Localized Significance Thresholds

In addition to regional significance thresholds, the SCAQMD developed localized significance thresholds (LSTs) for emissions of nitrogen dioxide (NO₂), carbon monoxide (CO), coarse particulate matter (PM₁₀), and fine particulate matter (PM_{2.5}) generated at new development sites (offsite mobile source emissions are not included in the LST analysis protocol). LSTs represent the maximum emissions that can be generated at a project site without expecting to cause or substantially contribute to an exceedance of the most stringent national or state ambient air quality standards. LSTs are based on the ambient concentrations of that pollutant within the Project source receptor area (SRA), as demarcated by the SCAQMD, and the distance to the nearest sensitive receptor. The Project Site is located within SCAQMD SRA 16 (North Orange County). The table below shows the LSTs for a one-, two-, and five-acre project site in SRA 16 with sensitive receptors located within 25 meters of the Project Site. (The closest sensitive receptors to the Project Site are 37 meters distant at the nearest.)

Local Significance Thresholds at 25 Meters of a Sensitive Receptor				
Project Size	Pollutant (pounds per day) Construction / Operations			
	NO₂	CO	PM₁₀	PM_{2.5}
1 Acre	103 / 103	522 / 522	4 / 1	3 / 1
2 Acres	147 / 147	762 / 762	6 / 2	4 / 1
5 Acres	221 / 221	1,311 / 1,311	11 / 3	6 / 2

Source: SCAQMD 2009

The nearest sensitive receptors to onsite construction activity are residences located across Valencia Avenue, approximately 37 meters distant. LST thresholds are provided for distances to sensitive receptors of 25, 50, 100, 200, and 500 meters. LSTs for receptors located at 25 meters were utilized in this analysis as a conservative approach.

The appropriate SRA for the localized significance thresholds is SRA 16 (North Orange County) as this area encompasses the Project Site. The SCAQMD has produced lookup tables for projects under five acres. The Proposed Project Site encompasses approximately 31.6 acres. For the purposes of this analysis, the LST value for a five-acre site from the SCAQMD's LST lookup tables was employed. This approach is conservative because it assumes the dispersion of air pollutants over only five acres before reaching sensitive receptors, as opposed to accounting for the dispersion of air pollutants over the greater 31.6-acre area. By applying the five-acre threshold to a larger 31.6-acre site, the threshold value does not account for increased dispersion of pollutants, and therefore is a more stringent threshold than if it were specifically calculated for 31.6 acres. This conservative assumption ensures a more protective assessment of localized operational air quality impacts.

Methodology

Air quality impacts were assessed in accordance with methodologies recommended by the SCAQMD. Where criteria air pollutant quantification was required, emissions were modeled using the California Emissions Estimator Model (CalEEMod), version 2022.1. CalEEMod is a statewide land use emissions computer model designed to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects. Project Alternative construction-generated air pollutant emissions were calculated using CalEEMod model defaults for Orange County and information provided by the Project proponent for each of the Project Alternatives, such as square footage and land uses. Operational air pollutant emissions were based on the site acreage and building dimensions provided by the Project Alternative descriptions and daily traffic trip numbers provided in the Project Alternatives Trip Generation and VMT Comparison (NV5 Engineers & Consultants 2024a). The Project Alternatives Trip Generation and VMT Comparison provides the Project Alternatives' daily vehicle generation. Project Alternative 1 would consist of 36 maximum daily heavy duty truck trips and 5,778 maximum daily passenger vehicle trips. Project

Alternative 2 would consist of 53 maximum daily heavy duty truck trips, 1,144 maximum daily passenger vehicle trips, and 587 maximum daily van trips. Project Alternative 3 would consist of 90 maximum daily heavy duty truck trips, 5,816 average daily passenger vehicle trips, and 690 maximum daily van trips (NV5 Engineers & Consultants 2024a). The maximum trip length for each Project Alternative is sourced from the Project Alternative's Trip Generation and VMT Comparison (NV5 Engineers & Consultants 2024a). The assumptions made for the modeling of each Project Alternative are listed in detail below.

Project Alternative 1

Alternative 1 was modeled with CalEEMod using the lot acreage and building square footage provided in the Project Description and estimated landscaped area obtained from aerial photography. Construction emissions were not accounted for in Project Alternative 1, as this alternative considers the existing use on the Project Site. Vehicle fleet mix and trip generation inputs in CalEEMod were updated to reflect the information provided in the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a). All truck activity was attributed to the Parking Lot land use's trips, and all passenger vehicle activity was attributed to the General Office Building land use's trips.

Project Alternative 2

Alternative 2 was modeled with CalEEMod using information found in the Project Alternatives Trip Generation and VMT Comparison (NV5 Engineers & Consultants 2024a). The landscaped area, material export, construction phasing and construction equipment were all assumed to be the same as the Proposed Project. Vehicle fleet mix and trip data were updated to reflect information from the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a). Van trips were modeled as Medium Duty Vehicles. Truck trips were modeled as Heavy-Heavy Duty Trucks. Passenger vehicle trips were divided among Passenger Cars, Light Duty Trucks 1, and Light Duty Trucks 2. Truck trips were attributed to the Parking Lot land use, Passenger trips were attributed to the Unrefrigerated Warehouse – No Rail land use, and van trips were attributed to the General Office Building land use.

Project Alternative 3

Alternative 3 was modeled with CalEEMod using information provided in the Project Description, the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a), and aerial photography. Project Alternative 3 required two separate CalEEMod modeling scenarios: Construction and Operations. The separation of construction and operations was done to accurately reflect the intensity of the reconstruction of the first floor of the proposed mixed-use building, as this alternative proposes to modify the existing commercial building on the Project Site. Outdoor construction was assumed to only occur on 21,780 square feet (half-acre), with the indoor construction affecting 163,000 square-feet. Construction equipment and material import were estimated based on information provided by the Project proponent. This analysis is conservative, as this Project Alternative would not necessarily require paving or grading, yet the modeling still considers the effects of both. Operational vehicle fleet mix and trip data were updated to reflect information provided in the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a). Truck trips were attributed to the Parking Lot land use in CalEEMod, passenger trips generated by the commercial land use were attributed to the General Office Building land use in CalEEMod, and van and passenger trips generated by the delivery station were attributed to the Unrefrigerated Warehouse - No Rail land use in

CalEEMod. It is noted that the passenger automobiles associated with the Alternative 3 commercial land use were identified as averaging different trip lengths compared to the passenger automobiles associated with the Alternative 3 delivery station (8.9 miles versus 20.9 miles, respectively). Thus, passenger automobile trips are included in both CalEEMod land uses in order to accurately represent the trip length information provided in the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a).

See Air Quality/Greenhouse Gas Emission Calculations Attachment for more information regarding the construction assumptions, including construction equipment, phasing and duration, used for each alternative in this analysis.

Air Quality Impact Discussion

Project Alternative 1 (No Project)

Regional Construction Significance Analysis & Localized Construction Significance Analysis

This Project Alternative would require no construction, as it involves the reoccupation of the existing building with offices uses as permitted by the General Plan land use designation and zoning. No new construction is proposed.

Regional Operational Significance Analysis

Implementation of Alternative 1 would result in long-term operational emissions of criteria air pollutants such as PM₁₀, PM_{2.5}, CO, and sulfur dioxide (SO₂) as well as ozone (O₃) precursors such as reactive organic gases (ROGs) and nitrogen oxide (NO_x). Long-term operational emissions attributable to Alternative 1 are identified and compared to the operational significance thresholds promulgated by the SCAQMD.

Operational-Related Emissions for Project Alternative 1 (Regional Significance Analysis)						
Emission Source	Pollutant (pounds per day)					
	ROG	NO_x	CO	SO₂	PM₁₀	PM_{2.5}
Mobile	13.10	15.50	135.00	0.39	37.90	9.80
Area	19.90	0.23	27.70	0.00	0.05	0.04
Energy	0.24	4.34	3.65	0.03	0.33	0.33
Total:	33.24	20.07	166.35	0.42	38.28	10.17
<i>SCAQMD Regional Significance Threshold</i>	<i>55</i>	<i>55</i>	<i>550</i>	<i>150</i>	<i>150</i>	<i>55</i>
Exceed SCAQMD Regional Threshold?	No	No	No	No	No	No

Source: CalEEMod version 2022.1.

Notes: Emissions taken from the season, summer or winter, with the highest output. The Trip Generation and VMT Comparison estimates Alternative 1 would generate 36 maximum daily heavy-duty truck trips and 5,778 maximum daily passenger vehicle trips. (NV5 2024a).

Localized Operational Significance Analysis

Long-term operational localized emissions attributable to Alternative 1 are identified and compared to the operational LST thresholds promulgated by the SCAQMD.

Operational-Related Emissions Attributable to Project Buildout for Project Alternative 1 (Localized Significance Analysis)				
Activity	Onsite Pollutant (pounds per day)			
	NO_x	CO	PM₁₀	PM_{2.5}
Area	0.23	27.70	0.05	0.04

<i>SCAQMD Localized Significance Threshold (5.0 acre of disturbance at 25 meters)</i>	221	1,311	3	2
Exceed SCAQMD Localized Threshold?	No	No	No	No

Source: CalEEMod 2022.1.

Notes: Emissions taken from the season, summer or winter, with the highest output.

Project Alternative 2 (Reduced Size and Operations)

Regional Construction Significance Analysis

Predicted maximum daily construction-generated regional emissions for Alternative 2 are summarized in the following table.

Construction-Related Emissions for Project Alternative 2 (Regional Significance Analysis)						
Construction Year	Pollutant (pounds per day)					
	ROG	NO_x	CO	SO₂	PM₁₀	PM_{2.5}
Construction Calendar Year One	3.25	18.80	162.00	0.30	9.52	1.66
Construction Calendar Year Two	0.95	6.93	41.70	0.07	1.19	0.40
Construction Calendar Year Three	40.90	6.87	41.50	0.07	1.19	0.40
<i>SCAQMD Regional Significance Threshold</i>	75	100	550	150	150	55
Exceed SCAQMD Regional Threshold?	No	No	No	No	No	No

Source: CalEEMod version 2022.1.

Notes: Emissions taken of the season, summer or winter, with the highest outputs. Emissions account for the export of 25,680 cubic yards of soil. Emission reduction/credits for construction emissions are applied based on the required implementation of SCAQMD Rule 403. The specific Rule 403 measures applied in CalEEMod include the following: sweeping/cleaning adjacent roadway access areas daily; washing equipment tires before leaving the construction site; water exposed surfaces three times daily; and limit speeds on unpaved roads to 25 miles per hour.

Localized Construction Significance Analysis

Predicted maximum daily construction-generated localized emissions for Alternative 2 are summarized in the following Table.

Construction-Related Emissions for Project Alternative 2 (Localized Significance Analysis)				
Activity	Onsite Pollutant (pounds per day)			
	NO_x	CO	PM₁₀	PM_{2.5}
Demolition Calendar Year One	15.40	41.40	8.52	1.40

<i>SCAQMD Localized Significance Threshold (5.0 acres of disturbance at 25 meters)</i>	<i>221</i>	<i>1,311</i>	<i>11</i>	<i>6</i>
Exceed SCAQMD Localized Threshold?	No	No	No	No

Source: CalEEMod 2022.1.

Notes: Emissions taken of the season, summer or winter, with the highest outputs. Emissions account for the export of 25,680 cubic yards of soil. Emission reduction/credits for construction emissions are applied based on the required implementation of SCAQMD Rule 403. The specific Rule 403 measures applied in CalEEMod include the following: sweeping/cleaning adjacent roadway access areas daily; washing equipment tires before leaving the construction site; water exposed surfaces three times daily; and limit speeds on unpaved roads to 25 miles per hour.

Regional Operational Significance Analysis

Long-term operational regional emissions attributable to Alternative 2 are identified and compared to the operational significance thresholds promulgated by the SCAQMD.

Operational-Related Emissions for Project Alternative 2 (Regional Significance Analysis)						
Emission Source	Pollutant (pounds per day)					
	ROG	NO_x	CO	SO₂	PM₁₀	PM_{2.5}
Mobile	4.49	15.00	78.20	0.32	25.60	6.68
Area	4.98	0.06	6.71	0.00	0.01	0.01
Energy	0.05	0.82	0.69	0.00	0.06	0.06
Total:	9.52	15.88	85.60	0.32	25.67	6.75
<i>SCAQMD Regional Significance Threshold</i>	<i>55</i>	<i>55</i>	<i>550</i>	<i>150</i>	<i>150</i>	<i>55</i>
Exceed SCAQMD Regional Threshold?	No	No	No	No	No	No

Source: CalEEMod version 2022.1.

Notes: Emissions taken from the season, summer or winter, with the highest output. The Trip Generation and VMT Comparison estimates that Alternative 2 would generate 53 maximum daily heavy-duty truck trips, 1,144 maximum daily passenger vehicle trips, and 587 maximum daily van trips (NV5 2024a).

Localized Operational Significance Analysis

Long-term operational localized emissions attributable to Alternative 2 are identified and compared to the operational LST thresholds promulgated by the SCAQMD. This Alternative would involve 53 daily heavy-duty trucks and 587 delivery vans and therefore, for a worst-case scenario assessment, the emissions shown in the following table include all “onsite” project-related stationary (area) sources and 10 percent of the operational-related mobile sources to represent onsite movement of internal traffic on the Project Site.

Operational-Related Emissions Attributable to Project Buildout for Project Alternative 2 (Localized Significance Analysis)				
Activity	Onsite Pollutant (pounds per day)			
	NO_x	CO	PM₁₀	PM_{2.5}
Mobile (10%)	1.50	7.82	2.56	0.67
Area	0.06	6.71	0.01	0.01
Energy	0.82	0.69	0.06	0.06
Total	2.38	15.22	2.63	0.74

GREENHOUSE GAS EMISSIONS

Standards of Significance

The significance of the Project Alternatives' GHG emissions is evaluated consistent with CEQA Guidelines Section 15064.4(b)(2).

Methodology

Where GHG emission quantification was required, emissions were modeled using CalEEMod, version 2022.1. CalEEMod is a statewide land use emissions computer model designed to quantify potential GHG emissions associated with both construction and operations from a variety of land use projects. Project Alternative construction-generated GHG emissions are calculated using a combination of CalEEMod model defaults for Orange County and information provided by the Project proponent for each of the Project Alternatives, such as square footage and land uses. Operational GHG emissions were based on the site acreage and building dimensions provided by the Project Alternative descriptions and daily trip numbers provided in the Project Alternative Trip Generation and VMT Comparison (NV5 2024a). The Project Alternative Trip Generation and VMT Comparison estimates the Project Alternatives' daily vehicle generation. Project Alternative 1 would consist of 36 maximum daily heavy duty truck trips and 5,778 maximum daily passenger vehicle trips. Project Alternative 2 would consist of 53 maximum daily heavy duty truck trips, 1,144 maximum daily passenger vehicle trips, and 587 maximum daily van trips. Project Alternative 3 would consist of 90 maximum daily heavy duty truck trips, 5,816 maximum daily passenger vehicle trips, and 690 maximum daily van trips. The maximum trip length for each Project Alternative is also sourced from the Project Alternative's Trip Generation and VMT Comparison (2024a). The assumptions made for the modeling of each Project Alternative are described in detail below.

Project Alternative 1

Alternative 1 was modeled with CalEEMod using the lot acreage and building square footage provided in the Project Description and estimated landscaped area obtained from aerial photography. Construction was not accounted for in Project Alternative 1, as this alternative considers the existing use on the Project Site. Vehicle fleet mix and trip generation inputs in CalEEMod were updated to reflect the information provided in the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a). All truck activity is attributed to the Parking Lot land use's trips, and all passenger vehicle activity is attributed to the General Office Building land use's trips.

Project Alternative 2

Alternative 2 was modeled with CalEEMod using information found in the Project Alternatives Trip Generation and VMT Comparison (NV5 Engineers & Consultants 2024a). The landscaped area, material export, construction phasing and construction equipment are all assumed to be the same as the Proposed Project. Vehicle fleet mix and trip data were updated to reflect information from the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a). Van trips were modeled as Medium Duty Vehicles. Truck trips were modeled as Heavy-Heavy Duty Trucks. Passenger vehicle trips were divided among Passenger Cars, Light Duty Trucks 1, and Light Duty Trucks 2. Truck trips were attributed to the Parking Lot land use,

Passenger trips were attributed to the Unrefrigerated Warehouse – No Rail land use, and van trips were attributed to the General Office Building land use.

Project Alternative 3

Alternative 3 was modeled with CalEEMod using information provided in the Project Description, the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a), and aerial photography. Project Alternative 3 required two separate CalEEMod modeling scenarios: Construction and Operations. The separation of construction and operations was done to accurately reflect the intensity of the reconstruction of the first floor of the proposed mixed-use building, as this alternative proposes to modify the existing commercial building on the Project Site. Outdoor construction was assumed to only occur on 21,780 square feet (half-acre), with the indoor construction affecting 163,000 square-feet. Construction equipment and material import were estimated based on information provided by the Project proponent. This analysis is conservative, as this Project Alternative would not necessarily require paving or grading, yet the modeling still considers the effects of both. Operational vehicle fleet mix and trip data were updated to reflect information provided in the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a). Truck trips were attributed to the Parking Lot land use in CalEEMod, passenger trips generated by the commercial land use were attributed to the General Office Building land use in CalEEMod, and van and passenger trips generated by the delivery station were attributed to the Unrefrigerated Warehouse - No Rail land use in CalEEMod. It is noted that the passenger automobiles associated with the Alternative 3 commercial land use were identified as averaging different trip lengths compared to the passenger automobiles associated with the Alternative 3 delivery station (8.9 miles versus 20.9 miles, respectively). Thus, passenger automobile trips are included in both CalEEMod land uses in order to accurately represent the trip length information provided in the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a).

See Air Quality/Greenhouse Gas Emission Calculations Attachment for more information regarding the construction assumptions, including construction equipment, phasing and duration, used for each alternative in this analysis

Greenhouse Gas Emissions Impact Discussion

Project Alternative 1 (No Project)

Alternative 1 Construction

Construction-related activities that would generate GHG emissions include worker commute trips, haul trucks carrying supplies and materials to and from the Project Site, and off-road construction equipment (e.g., dozers, loaders, excavators). As this Project Alternative does not involve construction, analysis is not required.

Alternative 1 Operations

Operation of Alternative 1 would result in an increase in GHG emissions primarily associated with mobile sources.

Operational-Related Greenhouse Gas Emissions for Project Alternative 1	
Emissions Source	CO₂e (Metric Tons/ Year)
Mobile	6,536
Area	13
Energy	3,769
Water	341
Waste	185
Refrigerants	<1
Total:	10,844

Source: CalEEMod version 2022.1.

Notes: Emissions taken from the season, summer or winter, with the highest output. The Trip Generation and VMT Comparison estimates Alternative 1 would generate 36 maximum daily heavy-duty truck trips and 5,778 maximum daily passenger vehicle trips. (NV5 2024a).

Project Alternative 2 (Reduced Size and Operations)

Alternative 2 Construction

Construction-related activities that would generate GHG emissions include worker commute trips, haul trucks carrying supplies and materials to and from the Project Site, and off-road construction equipment (e.g., dozers, loaders, excavators). Once construction is complete, the generation of these GHG emissions would cease.

Construction-Related Greenhouse Gas Emissions for Project Alternative 2	
Emissions Source	CO₂e (Metric Tons/ Year)
Construction Calendar Year One	1,417
Construction Calendar Year Two	1,056
Construction Calendar Year Three	297
Total Construction Emissions	2,770
<i>Construction Emissions (amortized over the 30-year life of the Project)</i>	92

Source: CalEEMod version 2022.1.

Notes: GHG emissions account for the export of 25,680 cubic yards of soil. Emission

Consistent with SCAQMD recommendations, Project construction GHG emissions have been amortized of the expected life of the land use, which is considered to be 30 years per the SCAQMD, and added to the annual average operational emissions.

Alternative 2 Operations

Long-term operational GHG emissions attributable to Alternative 2 are identified in the table below.

Operational-Related Greenhouse Gas Emissions for Project Alternative 2	
Emissions Source	CO₂e (Metric Tons/ Year)
Construction Emissions (amortized over the 30-year life of the Project)	92
Mobile	5,456
Area	3
Energy	647
Water	110
Waste	45
Refrigerants	<1
Total:	6,353

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

Notes: Emissions taken from the season, summer or winter, with the highest output. The Trip Generation and VMT Comparison estimates Alternative 2 would generate 53 maximum daily heavy-duty truck trips , 1,144 maximum daily passenger vehicle trips, and 587 maximum daily van trips. (NV5 2024a).

Project Alternative 3 (Mixed Use of Office and Warehouse Space)

Alternative 3 Construction

Construction-related activities that would generate GHG emissions include worker commute trips, haul trucks carrying supplies and materials to and from the Project Site, and off-road construction equipment that would match the lower intensity of construction that this Project Alternative proposes. The following table illustrates the specific construction generated GHG emissions that would result from construction of the Project. Once construction is complete, the generation of these GHG emissions would cease.

Construction-Related Greenhouse Gas Emissions for Project Alternative 3	
Emissions Source	CO₂e (Metric Tons/ Year)
Construction Calendar Year One	110
Construction Calendar Year Two	249
Total Construction Emissions	359
<i>Construction Emissions (amortized over the 30-year life of the Project)</i>	12

Source: CalEEMod version 2022.1.

Notes: GHG emissions account for the import of 10,000 cubic yards of soil.

Consistent with SCAQMD recommendations, Project construction GHG emissions have been amortized of the expected life of the Project, which is considered to be 30 years per the SCAQMD and added to the annual average operational emissions.

Project Operations

Long-term operational GHG emissions attributable to Alternative 3 are identified in the table below.

Operational-Related Greenhouse Gas Emissions for Project Alternative 3	
Emissions Source	CO₂e (Metric Tons/ Year)
Construction Emissions (amortized over the 30-year life of the Project)	12
Mobile	11,391
Area	13
Energy	3,202
Water	367
Waste	186
Refrigerants	<1
Total:	15,171

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

Notes: Emissions taken from the season, summer or winter, with the highest output. The Trip Generation and VMT Comparison estimates that Alternative 3 would generate 90 maximum daily heavy-duty truck trips, 5,816 maximum daily passenger vehicle trips, and 690 maximum daily van trips. (NV5 2024a).

ENERGY CONSUMPTION

Standards of Significance

The Project Alternatives energy consumption analysis focuses on the main sources of energy that are relevant to the Project Alternatives: electricity, natural gas, the equipment-fuel necessary for Project construction, and the fuel necessary for Project operations.

Methodology

The levels of construction and operational related energy consumption estimated to be consumed by the Project include the number of kWh of electricity, therms of natural gas, gallons of gasoline, and gallons of diesel. The amount of total construction-related fuel used for both gasoline and diesel was estimated using ratios provided in the Climate Registry's General Reporting Protocol for the Voluntary Reporting Program, Version 2.1 (2016). Electricity consumption estimates were calculated using the California Emissions Estimator Model (CalEEMod), version 2022.1. CalEEMod is a statewide land use computer model designed to quantify resources associated with both construction and operations from a variety of land use projects. CalEEMod results for CO₂ equivalents for each phase were added to deduce the gallons of gasoline and diesel consumption from off-road equipment, hauler and vender trips, and worker trips. These outputs are organized by year, as such operational automotive fuel consumption has been calculated with Emission FACtor (EMFAC) 2021. EMFAC 2021 is a mathematical model that was developed to calculate emission rates and rates of gasoline and diesel consumption from motor vehicles that operate on highways, freeways, and local roads in California.

Energy Consumption Impact Discussion

Project Alternative 1 (No Project)

This Project Alternative would require no construction, as it involves the current land use existing on the Project Site with no new construction proposed. The following table presents the operational electricity, operational natural gas, and operational fuel use estimated for Alternative 1.

Energy and Fuel Consumption for Alternative 1	
Energy Type	Alternative 1 Annual Energy Consumption
Alternative 1 Energy Consumption	
Electricity Consumption ¹	12,009,182 kilowatt-hours
Natural Gas Consumption ¹	161,584 therms
Alternative 1 Operational Fuel (Gallons)	
Gasoline

Standards of Significance

For the purposes of this analysis, construction noise associated with each Alternative is compared to the Federal Transit Administration (FTA) standard construction noise threshold of 80 dBA. The increase in transportation-related noise is compared against the Federal Interagency Committee on Noise (FICON) recommendation for evaluating the impact of increased traffic noise. Onsite noise generated as a result of Project operations is compared to the City's exterior residential noise standards.

Methodology

Predicted construction noise levels were calculated utilizing the Federal Highway Administration's (FHWA's) Roadway Construction Noise Model (2006). It is acknowledged that the majority of construction equipment is not situated at any one location during construction activities, but rather spread throughout the Project Site and at various distances from sensitive receptors. Therefore, this analysis employs FTA guidance for calculating construction noise, which recommends measuring construction noise produced by all construction equipment simultaneously from the center of the Project Site (FTA 2018), which in this case is approximately 574 feet from the closest single family home east of the Project Site, across Valencia Avenue.

Transportation-source noise levels associated with the Project were calculated using the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108) coupled with the trip generation rates for each Project Alternative identified in the Project Alternatives Trip Generation and VMT Comparison (NV5 2024a) and the traffic distribution identified in the Traffic Impact Assessment for Brea Delivery Station (NV5 2024b). Project Alternative trip generation rates were added to the existing roadway traffic in order to accurately calculate each Alternative's contribution to existing traffic noise levels. Traffic generated by each Project Alternative was assumed to only influence the roadway segments affected by the Proposed Project. The amount of trips generated by the Project Alternatives were compared to information provided in the Traffic Impact Assessment for Brea Delivery Station (NV5 2024b).

Onsite stationary source noise levels associated with each Alternative has been calculated with the SoundPLAN 3D noise model, which predicts noise propagation from a noise source based on the location, noise level, and frequency spectra of the noise sources as well as the geometry and reflective properties of the local terrain, buildings and barriers. Two scenarios for both Alternative 2 and Alternative 3 are modeled in SoundPLAN. The first scenario accounts for daytime activity (7:00 a.m. – 10:00 p.m.) with all internal circulation routes modeled as line sources traversing the proposed path of travel provided by the Project proponent. Additionally, area sources were placed over the proposed van loading areas as well as the line haul truck stalls located directly adjacent to the proposed building. The second scenario accounts for nighttime activity (10:00 p.m. – 7:00 a.m.) which only includes the haul truck noise sources. Note that for Project Alternative 1, the only noise source accounted for was parking lot circulation during the daytime. Modeled noise levels are based on reference noise levels collected from field noise measurements and other published sources from similar types of activities and are then used to estimate noise levels expected with the Project's non-transportation noise sources. The reference noise levels are used to represent a worst-case noise environment as noise levels from area and line sources (e.g., internal truck circulation, truck

unloading) can vary throughout the day. SoundPLAN allows computer simulations of noise situations, and creates noise contours maps using reference noise levels, topography, point and area noise sources, mobile noise sources, and intervening structures.

Noise Impact Discussion

Project Alternative 1 (No Project)

Onsite Construction Noise & Offsite Construction Worker Trips

This Project Alternative does not require any construction, and therefore noise generated by construction is not considered.

Operational Offsite Traffic Noise

The table below shows the calculated offsite roadway noise levels with Alternative 1 traffic during Existing Plus Alternative 1 conditions. The City of Brea does not regulate noise from transportation sources for commercial projects and does not have noise standards for such sources. As such, the thresholds recommended by FICON will be used in this analysis.

- If the existing ambient noise levels at existing and future noise-sensitive land uses (e.g. residential, etc.) are less than 60 dBA CNEL and the project creates a readily perceptible 5 dBA CNEL or greater noise level increase,
or
- If the existing noise levels range from 60 to 65 dBA CNEL and the project creates a barely perceptible 3 dBA CNEL or greater noise level increase,
or
- If the existing noise levels already exceed 65 dBA CNEL and the project creates a community noise level increase of greater than 1.5 dBA CNEL.

Predicted Traffic Noise Levels for Alternative 1

Source: Traffic noise levels were calculated by ECORP using the FHWA roadway noise prediction model in conjunction with the trip generation rate identified by NV5 Engineers & Consultants (2024a).

Operational Onsite Noise

On-site noise associated with Alternative 1 has been calculated using the SoundPLAN 3D noise model coupled with the existing building, traffic patterns, and trips provided by NV5 Engineers & Consulting (2024b). Nighttime noise activity (10:00 p.m. – 7:00 a.m.) was not modeled as there is typically no noise-generating activity in commercial land uses during nighttime hours. A reference noise measurement representing parking circulation sourced from two separate reference noise measurements collected by ECORP Consulting, Inc. was used.

Project Alternative 2 (Reduced Size and Operations)

Onsite Construction Noise

The anticipated short-term construction noise levels generated for the necessary equipment for each phase of construction are presented.

Construction Average (dBA) Noise Levels at Nearest Receptors for Alternative 2					
Construction Phase	Average Ambient Noise Level* (dBA L_{eq})	Exterior Construction Noise Level @ Closest Noise Sensitive Receptor (dBA L_{eq})	Existing Ambient Noise + Exterior Construction Noise Levels (dBA L_{eq})	Construction Noise Standard (dBA L_{eq})	Exceeds Standards?
Demolition	68.7	69.2	72.2	80	No
Site Preparation and Grading		70.5	73.5	80	No
Building Construction		63.9	69.9	80	No
Paving and Painting		59.4	69.2	80	No

Source: Construction noise levels were calculated by ECORP Consulting using the FHWA Roadway Noise Construction Model (FHWA 2006).

Notes: *Average ambient noise levels of the Project Area were estimated using the average L_{eq} of the four short term noise measurement taken on June 3rd, 2024. Noise generated by both Site Preparation and Grading were combined to accurately model noise generated during those concurrent phases.

L_{eq} = The equivalent energy noise level, is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.

Operational Offsite Traffic Noise

The table below shows the calculated offsite roadway noise levels with Alternative 2 traffic during Existing Plus Alternative 2 conditions.

Proposed Project Predicted Traffic Noise Levels for Alternative 2

Source: Traffic noise levels were calculated by ECORP using the FHWA roadway noise prediction model in conjunction with the trip generation rate identified by NV5 Engineers & Consultants (2024).

Operational Onsite Noise

On-site noise associated with Alternative 2 has been calculated using the SoundPLAN 3D noise model, loading areas and truck stall locations provided by the Project proponent, and Project trips and circulation data provided by NV5 Engineers & Consultants (2024a). The modeling was developed using this approach as this Project Alternative is merely a reduced version of the Proposed Project. Two scenarios were modeled in SoundPLAN. The first scenario accounts for daytime activity (7:00 a.m. – 10:00 p.m.) with all internal circulation routes modeled as line sources traversing the proposed path of travel provided by NV5 (2024b). Additionally, area sources were placed over the proposed van loading zones located directly adjacent to the proposed building. The second scenario accounts for nighttime activity (10:00 p.m. – 7:00 a.m.) with haul trucks being the only noise-generating activity during that time. Haul truck circulation was modeled as line sources traversing the proposed path of travel as well as an area source encompassing the haul truck stalls. A reference noise measurement representing internal truck circulation sourced from a Loading Dock Noise Study (City of San Jose 2014) was used for all line sources and reference noise level for general cargo truck unloading was accessed from the SoundPLAN Noise Library and used for all area sources.

Predicted Non-Transportation Noise Levels for Alternative 2				
#	Location	Daytime/Nighttime Noise Level with Reduction from Existing Wall	Daytime/Nighttime Exterior Noise Standards (dBA L_{eq})	Exceed Daytime or Nighttime Exterior Standard?

Project Alternative 3 (Mixed Use of Office and Warehouse Space)

Onsite Construction Noise

The anticipated short-term construction noise levels generated for the necessary equipment for each phase of Alternative 3 construction are presented in the following Table.

Construction Average (dBA) Noise Levels at Nearest Receptors for Alternative 3					
Construction Phase	Average Ambient Noise Level* (dBA L_{eq})	Exterior Construction Noise Level @ Closest Noise Sensitive Receptor (dBA L_{eq})	Existing Ambient Noise + Exterior Construction Noise Levels (dBA L_{eq})	Construction Noise Standard (dBA L_{eq})	Exceeds Standards?
Site Preparation/Grading	68.7	62.5	69.6	80	No
Building Construction		59.1	69.2	80	No
Paving		65.1	70.2	80	No
Painting		53.5	68.8	80	No

Source: Construction noise levels were calculated by ECORP Consulting using the FHWA Roadway Noise Construction Model (FHWA 2006).

Notes: *Average ambient noise levels of the Project Area were estimated using the average L_{eq} of the four short term noise measurement taken on June 3rd, 2024.

L_{eq} = The equivalent energy noise level, is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.

Operational Offsite Traffic Noise

The table below shows the calculated offsite roadway noise levels with Alternative 3 traffic during Existing Plus Alternative 3 conditions.

Proposed Project Predicted Traffic Noise Levels for Alternative 3					
Roadway Segment	CNEL at 100 feet from Centerline of Roadway			FICON Standard	Exceed Standards?
	Existing	Existing + Alternative 3	Change		
Valencia Avenue/SR 142					
South of Imperial Highway	62.1	62.6	+0.5	>3	No
Between Imperial Highway and La Floresta Drive	62.5	65.4	+2.9	>3	No
Between La Floresta Drive and La Entrada Drive	62.2	62.5	+0.3	>3	No
Between La Entrada Drive and E. Birch Street/Rose Drive	62.2	62.5	+0.3	>3	No
North of E. Lambert Road	58.4	58.4	+0.0	>5	No
Imperial Highway/SR 90					
West of Valencia Avenue	63.5	66.0	+2.5	>3	No
East of Valencia Avenue	63.4	65.0	+1.6	>3	No
La Floresta Drive					
East of Valencia Avenue	49.8	49.9	+0.1	>5	No
La Entrada Drive					
East of Valencia Avenue	44.5	44.5	+0.0	>5	No
E. Birch Street/Rose Drive					
West of Ranger Street	60.6	60.6	+0.0	>3	No
Between Ranger Street and Voyager Avenue	60.2	60.2	+0.0	>3	No
Between Voyager Avenue and Valencia Avenue	59.8	59.9	+0.1	>5	No
East of Valencia Avenue	61.6	61.6	+0.0	>3	No
Ranger Street/S. Starflower Street					

Proposed Project Predicted Traffic Noise Levels for Alternative 3					
North of E. Birch Street	47.7	47.7	+0.0	>5	No
Voyager Avenue					
North of E. Birch Street	43.9	43.9	+0.0	>5	No

Source: Traffic noise levels were calculated by ECORP using the FHWA roadway noise prediction model in conjunction with the trip generation rate identified by NV5 Engineers & Consultants (2024).

Operational Onsite Noise

On-site noise associated with Alternative 3 has been calculated using the SoundPLAN 3D noise model and the existing building size. Traffic circulation was assumed to occur near existing docks and parking areas. Two scenarios were modeled in SoundPLAN. The first scenario accounts for daytime activity (7:00 a.m. – 10:00 p.m.) with all internal circulation routes modeled as line sources traversing the proposed path of travel provided by the Project proponent. Additionally, area sources were placed over the proposed van loading areas as well as the haul truck stalls located directly adjacent to the existing building. Noise attributed to parking activity for the existing commercial land use was also included in order to fully account for any noise generated by this Project Alternative. The second scenario accounts for nighttime activity (10:00 p.m. – 7:00 a.m.) with haul trucks being the only noise source during that time. Haul truck and van circulation were modeled as line sources traversing the existing roadways in the parking lot of the Project Site. Truck and van noise were also modeled as area sources encompassing the existing truck stalls. A reference noise measurement representing internal truck circulation sourced from a Loading Dock Noise Study (City of San Jose 2014) was used for all line sources and reference noise level for general cargo truck unloading was accessed from the SoundPLAN Noise Library and used for all area sources.

Predicted Non-Transportation Noise Levels for Alternative 3

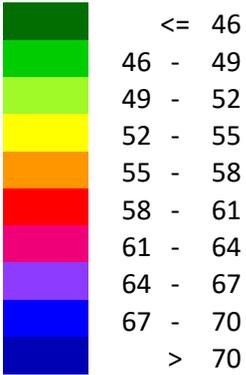

#	Location	Daytime/Nighttime Noise Level with Reduction from Existing Wall	Daytime/Nighttime Exterior Noise Standards (dBA L_{eq})	Exceed Daytime or Nighttime Exterior Standard?
1	Residence east of Project Site	41.6 / 17.6	55/50	No/ No
2	Residence east of Project Site	45.0 / 19.7	55/50	No/ No
3	Residence east of Project Site	46.3 / 19.8	55/50	No/ No

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.7	annual days of extreme heat
Extreme Precipitation	4.90	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	3.88	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	55.4
AQ-PM	85.6
AQ-DPM	66.3
Drinking Water	78.3
Lead Risk Housing	32.6
Pesticides	80.1
Toxic Releases	87.9
Traffic	83.9
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	66.4
Haz Waste Facilities/Generators	90.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	32.0
Cardio-vascular	51.3
Low Birth Weights	28.5
Socioeconomic Factor Indicators	—
Education	21.4
Housing	6.32
Linguistic	30.0
Poverty	20.1
Unemployment	36.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	91.17156422
Employed	78.94264083
Median HI	80.21301168
Education	—
Bachelor's or higher	85.62812781

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	81.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Lot acreage adjusted to match that of the Project Site.
Operations: Vehicle Data	Changed values to reflect data provided by NV5 (2024).
Operations: Fleet Mix	Fleet mix changed to reflect data provided by NV5 (2024). All truck activity is attributed to the Parking Lot land use's trips, and all passenger vehicle activity is attributed to the General Office Building land use's trips.
Operations: Road Dust	—

Architectural Coating	Onsite truck	—	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%

Limit vehicle speeds on unpaved roads to 25 mph	44%	44%
Sweep paved roads once per month	9%	9%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	231,413	77,138	73,333

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	750,000	—
Grading	—	25,680	1,020	0.00	—
Paving	0.00	0.00	0.00	0.00	28.1

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Unrefrigerated Warehouse-No Rail	0.00	0%
General Office Building	0.00	0%
Parking Lot	28.1	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005
2027	0.00	532	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Unrefrigerated Warehouse-No Rail	1,144	1,144	1,144	417,599	21,540	21,540	21,540	7,862,011
General Office Building	587	587	587	214,255	11,051	11,051	11,051	4,033,712
Parking Lot	53.0	53.0	53.0	19,345	2,756	2,756	2,756	1,005,940

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
0	0.00	231,413	77,138	73,333

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	250

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Unrefrigerated Warehouse-No Rail	649,859	532	0.0330	0.0040	2,676,454
General Office Building	274,914	532	0.0330	0.0040	391,020
Parking Lot	1,070,666	532	0.0330	0.0040	0.00

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Unrefrigerated Warehouse-No Rail	32,108,600	0.00
General Office Building	2,741,899	0.00
Parking Lot	0.00	4,195,843

5.13. Operational Waste Generation

5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Unrefrigerated Warehouse-No Rail	131	—
General Office Building	14.3	—

Parking Lot	0.00	—

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.7	annual days of extreme heat
Extreme Precipitation	4.90	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	3.88	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	55.4
AQ-PM	85.6
AQ-DPM	66.3
Drinking Water	78.3
Lead Risk Housing	32.6
Pesticides	80.1
Toxic Releases	87.9
Traffic	83.9
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	66.4

Haz Waste Facilities/Generators	90.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	32.0
Cardio-vascular	51.3
Low Birth Weights	28.5
Socioeconomic Factor Indicators	—
Education	21.4
Housing	6.32
Linguistic	30.0
Poverty	20.1
Unemployment	36.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	91.17156422
Employed	78.94264083
Median HI	80.21301168
Education	—
Bachelor's or higher	85.62812781

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	81.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Total site acreage is 31.6 acres.
Construction: Construction Phases	Construction schedule specified by Construction Questionnaire filled out by Applicant.
Construction: Off-Road Equipment	Construction Equipment specified by Construction Questionnaire filled out by Project Applicant.
Operations: Vehicle Data	Trip Generation data and VMT derived from the Project's VMT Report (NV5 Engineers & Consultants 2024).
Operations: Fleet Mix	Passenger vehicles are accounted for in the Unrefrigerated Warehouse - No Rail land use, Vans are accounted for in the General Office Building land use, and trucks are accounted for in the Parking Lot land use.
Construction: Dust From Material Movement	Material export provided by the Project proponent.
Construction: Trips and VMT	Hauling trips updated to match information provided by the Project proponent.

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.7	annual days of extreme heat
Extreme Precipitation	4.90	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	3.88	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	55.4
AQ-PM	85.6
AQ-DPM	66.3
Drinking Water	78.3
Lead Risk Housing	32.6

Pesticides	80.1
Toxic Releases	87.9
Traffic	83.9
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	66.4
Haz Waste Facilities/Generators	90.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	32.0
Cardio-vascular	51.3
Low Birth Weights	28.5
Socioeconomic Factor Indicators	—
Education	21.4
Housing	6.32
Linguistic	30.0
Poverty	20.1
Unemployment	36.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	91.17156422
Employed	78.94264083
Median HI	80.21301168
Education	—

Bachelor's or higher	85.62812781
High school enrollment	100
Preschool enrollment	17.18208649
Transportation	—
Auto Access	98.98626973
Active commuting	36.87925061
Social	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	81.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Lot acreage changed to reflect size of indoor construction and area affected.
Operations: Vehicle Data	Changed values to reflect data provided by NV5 (2024).
Operations: Fleet Mix	Fleet mix data changed to reflect proportions of traffic modeled by EPD Solutions

Construction: Construction Phases	Repurposing of commercial office space into an industrial warehouse. Site preparation and grading assumed to occur simultaneously. All construction assumed to be low intensity.
Construction: Off-Road Equipment	Equipment list changed to reflect intensity of Project Alternative construction.
Construction: Paving	Changed to reflect any outdoor paving on the Project Site.
Construction: Dust From Material Movement	Grading is only expected for half of an acre.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.7	annual days of extreme heat
Extreme Precipitation	4.90	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	3.88	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	55.4
AQ-PM	85.6
AQ-DPM	66.3
Drinking Water	78.3
Lead Risk Housing	32.6
Pesticides	80.1
Toxic Releases	87.9
Traffic	83.9
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	66.4
Haz Waste Facilities/Generators	90.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	32.0
Cardio-vascular	51.3
Low Birth Weights	28.5

Socioeconomic Factor Indicators	—
Education	21.4
Housing	6.32
Linguistic	30.0
Poverty	20.1
Unemployment	36.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	91.17156422
Employed	78.94264083
Median HI	80.21301168
Education	—
Bachelor's or higher	85.62812781
High school enrollment	100
Preschool enrollment	17.18208649
Transportation	—
Auto Access	98.98626973
Active commuting	36.87925061
Social	—
2-parent households	88.05338124
Voting	62.56897215
Neighborhood	—
Alcohol availability	49.35198255
Park access	81.35506224
Retail density	87.55293212

Supermarket access	43.9753625
Tree canopy	52.03387656
Housing	—
Homeownership	44.65546003
Housing habitability	69.57525985
Low-inc homeowner severe housing cost burden	74.05363788
Low-inc renter severe housing cost burden	92.23662261
Uncrowded housing	54.07416913
Health Outcomes	—
Insured adults	79.94353907
Arthritis	0.0
Asthma ER Admissions	62.9
High Blood Pressure	0.0
Cancer (excluding skin)	0.0
Asthma	0.0
Coronary Heart Disease	0.0
Chronic Obstructive Pulmonary Disease	0.0
Diagnosed Diabetes	0.0
Life Expectancy at Birth	77.6
Cognitively Disabled	78.9
Physically Disabled	47.8
Heart Attack ER Admissions	45.8
Mental Health Not Good	0.0
Chronic Kidney Disease	0.0
Obesity	0.0
Pedestrian Injuries	42.1
Physical Health Not Good	0.0
Stroke	0.0

Health Risk Behaviors	—
Binge Drinking	0.0
Current Smoker	0.0
No Leisure Time for Physical Activity	0.0
Climate Change Exposures	—

Climate Change Adaptive Capacity	—
Impervious Surface Cover	52.5
Traffic Density	79.8
Traffic Access	56.6
Other Indices	—
Hardship	17.0
Other Decision Support	—
2016 Voting	86.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	81.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

- a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
- b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Lot acreage of non-asphalt surfaces changed to reflect acreage remaining on the parcels. Office and parking lot acreage combined.
Operations: Vehicle Data	Changed values to reflect data provided by NV5 (2024).
Operations: Fleet Mix	Fleet mix data changed to reflect proportions of traffic modeled by NV5. The General Office Building land use contains all passenger trips considered for the existing office space.

Paving	Rollers	2	8	36	0.38	0.55	16	20	175.10
Architectural Coating	Air Compressors	1	6	37	0.48	0.71	6	45	191.81
Architectural Coating	Aerial Lifts	1	8	46	0.31	0.57	8	45	205.34
Total Construction Off-Road Fuel (Diesel) Consumption (gallon)									11,271.46

Notes:

1. Fuel Consumption Rate = Horsepower x Load Factor x Fuel Consumption Factor

Where:

Fuel Consumption Factor for a diesel engine is 0.04 gallons per horsepower per hour (gal/hp/hr) and a gasoline engine is 0.06 gal/hp/hr.

Source: Refer to CalEEMod outputs for assumptions used in this analysis.

TECHNICAL MEMORANDUM

To: Justin J. Mahramas
Shepphard Mullin

From: John Karnowski, P.E., PTOE, AICP
Traffic Services National Director, NV5

Date: August 2, 2024

RE: **CEQA Project Alternatives
Trip Generation and VMT Comparison
Brea Delivery Station, Brea, California**

This memo was written to show a comparison of the number of trips generated and the expected VMT for three CEQA alternative projects. They are as follows:

1. No project, with continued operations of the office use
2. Reduce project operations to include only 150,000 sf of floor area and an approx. 15% reduction to delivery vans and line-hauls
3. Utilize the existing building for warehouse and office, with the warehouse component equaling 163,000 sf and the office component equaling 474,503 sf

The trip generation is based on the user-supplied trip generation for a delivery station and for all other uses, the equations contained in the 11th edition of the ITE Trip Generation Manual, 2021 were used. Truck trip estimates for a general office building use were taken from the data tables in the Trip Generation appendices. Table 1 shows the trip comparison.

Table 1: Trip Generation Comparison

Land Use Code	Detail	Factor	Daily	AM Peak Hour			PM Peak Hour		
				IN	OUT	TOTAL	IN	OUT	TOTAL

Project (as proposed)

n/a	Delivery Station	User-Supplied	2,098	46	46	92	81	40	121
		<i>Autos</i>	1,346	12	0	12	80	40	120
		<i>Vans</i>	690	33	44	77	0	0	0
		<i>Trucks</i>	62	1	2	3	1	0	1

Alternative 1 - No project, office use only

710	General Office Bldg	637,503 sf	5,814	724	99	823	131	642	773
		<i>Autos</i>	5,778	721	96	817	131	642	773
		<i>Vans</i>	0	0	0	0	0	0	0
		<i>Trucks</i>	36	3	3	6	0	0	0

Alternative 2 - Reduce Proposed Operations of Project by 15%

n/a	Delivery Station	85% of Plan	1,784	39	39	78	69	34	103
		<i>Autos</i>	1,144	10	0	10	68	34	102
		<i>Vans</i>	587	28	37	65	0	0	0
		<i>Trucks</i>	53	1	2	3	1	0	1

Alternative 3 - Split current bldg into 163,000 sf Delivery Station; 474,503 sf Office

n/a	Delivery Station	User-Supplied	2,098	46	46	92	81	40	121
710	General Office Bldg	474,503 sf	4,498	562	77	639	103	502	605
		Total	6,596	608	123	731	184	542	726
		<i>Autos</i>	5,816	572	75	647	183	542	725
		<i>Vans</i>	690	33	44	77	0	0	0
		<i>Trucks</i>	90	3	4	7	1	0	1

No adjustments for passenger car equivalency

For Alternative 2, a reduction of van trips by 15% would also translate to an overall reduction of traffic by approximately the same amount. The building area has little bearing on the number of trips. This is because the warehouse staff, supervision, and related services is tied to the expected number of deliveries from the site.

VMT Analysis

To determine the VMT for each alternative, refer to the methodologies in the VMT study completed for the proposed project. The North Orange County Collaborative VMT Traffic Study Screening Tool (NOCC+ Screening Tool) includes the average trip length of a commuter who works in an office in TAZ 61 (the traffic analysis zone of the subject project), which is 8.9 miles per trip. This trip length is specific to office workers and is taken from the Orange County Transportation Analysis Model (OCTAM 5.0). For industrial-sector workers, the average trip length is 20.9 miles per OCTAM 5.0.

Table 2 shows the expected VMT for each of the alternatives using the aforementioned trip lengths, the number of trips shown in Table 1, and the relevant results in the project VMT study.

Table 2: VMT Comparison

Land Use	Personnel Count ¹	Emp. Trip Length (mi)	Daily Trips ³	Daily VMT	VMT per Service Population
Project (as proposed)					
Delivery Station	673	20.9	2,036	38,340 ²	56.97
Alternative 1 - No Project; Office Use (autos only)					
General Office Bldg (637,503 sf)	2,075	8.9	5,778	51,424	24.78
Alternative 2 - Reduce Proposed Operations of Project by 15%					
Delivery Station (85% of Plan)	572	20.9	1,731	32,589 ²	56.97
Alternative 3 - Split Current Bldg: 163,000 sf Warehouse; Remaining Space is Office					
Delivery Station	673	20.9	2,036	38,340 ²	56.97
General Office Bldg (474,503 sf)	1,545	8.9	4,470	39,783	25.75
Total	2,218	-	6,534	78,123	35.22

¹Personnel counts for a general office building were derived from the ITE Trip Generation, 11th Ed. using a comparison of trips per sq. ft. vs. trips per employee.

²Delivery station VMT includes delivery operations (i.e., van and other delivery activities). Refer to the project VMT study for more detail on how VMT was calculated.

³Does not include truck trips.
