

NOVEMBER 2024

DRAFT ENVIRONMENTAL IMPACT REPORT

DJT4 PARCEL DELIVERY FACILITY PROJECT

SCH NO. 2023070241

Appendices

CITY OF BREA
Planning Division
1 Civic Center Circle
Brea, California 92821

PREPARED BY

Michael Baker
INTERNATIONAL

**APPENDIX A:
NOTICE OF PREPARATION
AND PUBLIC COMMENT LETTERS**

This page intentionally left blank.

PROJECT LOCATION: The Project is located at 275 Valencia Avenue on Assessor Parcel Numbers 320-233-17, 320-301-11, and 320-301-12 (Project Site) in the City of Brea. Primary regional access to the Project Site is provided via Imperial Highway/State Route (SR) 90 approximately 0.2 miles to the south of the Project Site and Carbon Canyon Road/SR 142 approximately 0.4 miles to the north of the Project Site. Local access to the Project Site is provided via Valencia Avenue, Surveyor Avenue, E. Birch Street, and Enterprise Street.

As shown in **Figure 1 – Project Vicinity**, the Project Site is bounded by Valencia Avenue to the east, Nasa Street to the south, Surveyor Avenue to the west, and adjacent industrial and office uses to the north. Surrounding uses in the vicinity of the Project Site include existing light industrial, office, and surface parking uses to the west, south and north. To the east and south-southeast, across Valencia Avenue, is La Floresta, a master-planned horizontal mixed-use community comprised of single and multi-family residential uses and a mix of retail and restaurant uses.

EXISTING CONDITIONS: The Project Site is currently occupied by an existing three-story office building containing approximately 637,503 square feet of floor area and a 1,952-stall surface parking lot. The existing office building is surrounded by paved surfaces, trees, shrubs, and ornamental landscaping. There are approximately 100 trees within the parking area and along the perimeter of the Project Site. Existing vehicular access to the Project Site is provided via four curb-cuts along Valencia Avenue, one curb-cut on Nasa Street, and two curb-cuts on Surveyor Avenue. Existing pedestrian access to the Project Site is generally provided at the intersection of Valencia Avenue and La Entrada Drive.

The Project Site has two land use designations under the City of Brea General Plan (General Plan). The northern 24.52-acre portion of the Project Site is designated as Light Industrial, intended for industrial uses that are low intensity and contained entirely within buildings. The Light Industrial designation allows for a maximum FAR of 0.75. The southern 7-acre portion of the Project Site is designated as Mixed Use II, which is intended to provide opportunities for the coordinated development of urban villages that offer a diverse range of complementary land uses in close proximity to one another. The Mixed Use II land use designation allows a maximum FAR of 2.00.

The northern 24.52-acre portion of the Project Site is zoned Light Industrial (M-1), and the southern 7-acre portion of the site is zone Mixed-Use II (MU-II). Per the City of Brea City Code (BCC), M-1 zoning permits an array of light industrial uses, including warehouse and storage, and MU-II zoning permits a mix of commercial, residential, and parking uses. Both M-1 and MU-II zones permit a maximum height of 60 feet.

PROJECT DESCRIPTION: The Project would demolish the existing 637,503-square-foot office building and surface parking lot to construct a 181,500-square-foot parcel delivery facility, consisting of 163,350 square feet of warehouse space and 18,150 square feet of ancillary office space, on a 31.52-acre site. The proposed facility would be a single-story building with a maximum height of 44 feet and FAR of 0.14. The Project would provide 1,064 vehicle parking spaces (consisting of 305 automobile spaces, 755 delivery van spaces, and four trailer truck spaces), 180 van loading spaces (90 loading spaces and 90 staging spaces), and 14 Utility Tractor Rig loading spaces to serve facility operations. The proposed facility would be generally located in the center of the Project Site and flanked by loading areas and surrounded by vehicle parking. The Project building would be located entirely within the M-1 zone, and surface parking and drive aisles would be located within the M-1 and MU-II zoned portion of the Project Site.

The Project would operate 24 hours per day, 7 days per week to support delivery of packages to customer locations. The Applicant anticipates approximately 25 line haul trucks delivering packages to the Project Site each day, primarily between the hours of 10:00 p.m. to 8:00 a.m. The packages are removed from the line haul trucks, sorted by delivery routes, placed onto movable racks, and staged for dispatch. Delivery Service Partner (DSP) and Amazon Flex drivers would work shifts between the hours of 9:20 a.m. and 9:10 p.m. to deliver customer packages. Amazon associates and managers would be assigned shifts to support and supervise delivery operations. Employee shifts and departure windows for delivery drivers are designed to alleviate impacts during rush hour periods.

The Applicant anticipates that on a daily basis, there would be a total of 224 associates, managers, and dispatchers who work within the proposed facility; 312 van drivers; and 80 Flex drivers.¹ In order to fulfill the operational need, the Applicant anticipates that a maximum of 800 workers would be hired at the proposed facility.

¹ Amazon Flex delivery drivers are independent contractors who utilize their own vehicle to deliver packages for Amazon. Types of permitted vehicles include 4-door, mid-sized sedan or larger vehicle, such as a truck with a covered bed, SUV, or a van.

ORANGE COUNTY CLERK-RECORDER DEPARTMENT

BY: to DEPUTY

ENVIRONMENTAL EFFECTS IDENTIFIED FOR FURTHER ANALYSIS:

Based on a preliminary environmental assessment, the City determined that the Project could result in potentially significant impacts on the environment. Accordingly, the City will prepare an EIR to evaluate the potential impacts in greater detail. This determination is based upon the criteria of the CEQA Guidelines, Section 15063 (Initial Study), 15064 (Determining Significant Effect), and 15065 (Mandatory Findings of Significance). Pursuant to CEQA Guidelines Section 15063, an Initial Study is not required to determine that an EIR will be prepared and is therefore not attached.

The purpose of the EIR is to provide information about potential short-term, long-term, and cumulative impacts of the Project on the environment; identify possible ways to minimize the significant impacts; and describe and analyze possible alternatives to the Project that could avoid or reduce one or more of these significant impacts. The topics to be discussed in the EIR include the following:

- **AIR QUALITY:** The Project is located within the South Coast Air Basin, which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The Project would generate air pollutants during both construction and operation. Construction of the Project would include site clearance/demolition, excavation and grading, hauling of materials, and building construction, all of which would generate dust and equipment exhaust. In the long term, the proposed development would change vehicular travel to and from the Project Site and in the surrounding area, thus potentially increasing tailpipe emissions. Other activities typically associated with a warehouse building could also generate air pollutant emissions, such as outdoor landscaping and building maintenance. The EIR will quantify the Project's construction and operation emissions and compare the Project's emissions to the SCAQMD's regional and localized thresholds of significance. Project consistency with the SCAQMD regional Air Quality Management Plan will also be assessed. If air quality impacts are deemed to be potentially significant, the EIR will identify mitigation measures to reduce or avoid such impacts to less than significant levels if feasible.
- **ENERGY:** The EIR will include an analysis of the anticipated energy usage associated with construction and operation of the Project Site, including electricity, petroleum fuels, and natural gas. The analysis will evaluate whether consumption of these energy resources would result in significant impacts related to the inefficient, wasteful, or unnecessary consumption of energy or whether the Project's energy consumption characteristics would conflict with adopted plans and programs aimed at fostering energy efficiency and use of renewable forms of energy. If energy impacts are deemed to be potentially significant, the EIR will identify mitigation measures to reduce or avoid such impacts to less than significant levels if feasible.
- **GREENHOUSE GAS (GHG) EMISSIONS:** The Project would generate GHG emissions during construction and operation activities. GHG emissions would primarily result from construction equipment exhaust, change in vehicle trips to and from the developed parcel delivery facility, and consumption of natural gas and electrical energy. The Project's GHG footprint will be quantified by primary sources, in accordance with current industry standards for metrics and reporting. The EIR will evaluate the environmental consequences of the Project's GHG impacts in consideration of the Climate Change Scoping Plan, the Southern California Association of Governments' Regional Transportation Plan/Sustainable Communities Strategy, the City of Brea's sustainability goals and policies, and guidance provided by the California Air Resources Board and SCAQMD. If GHG emissions impacts are deemed to be potentially significant, the EIR will identify mitigation measures to reduce or avoid such impacts to less than significant levels if feasible.
- **HAZARDS AND HAZARDOUS MATERIALS:** The EIR will consider the potential for site contamination from prior land uses and whether the Project Site is included as a hazardous materials site pursuant to Government Code Section 65962.5. Further, the potential for public exposure to hazardous materials through routine transport, use, or disposal of hazardous materials or through foreseeable upset or accident conditions through release of hazardous materials will be evaluated in the EIR. The EIR will also evaluate whether the Project would interfere with an adopted emergency response or evacuation plan and whether the Project would expose people or structures to risk of loss, injury, or death involving wildland fires. If hazards and hazardous material impacts are deemed to be potentially significant, the EIR will identify mitigation measures to reduce or avoid such impacts to less than significant levels if feasible.
- **NOISE:** Construction and operation of the Project would generate noise and vibration sources on and near the Project Site. Short-term construction noise, as well as groundborne vibrations, would result from the use of construction equipment, construction procedures, and haul trucks traveling to and from the Project Site. Operational noise would primarily result from Project-related traffic including delivery vehicle trips. The project

ORANGE COUNTY CLERK-RECORDER DEPARTMENT

BY: TP DEPUTY

to the south of the Project Site.² The nearest eligible state scenic highway is a segment of SR-57 (between Imperial Highway/SR-90 and SR-60) located approximately 1.8 miles to the west of the Project Site.³ Views along SR-57 toward the Project Site are generally constrained by topographical changes, trees and other existing vegetation, and existing development. Therefore, the significant distance and intervening terrain make it unlikely that the Project would be visible from a state scenic highway. As such, the Project would not substantially damage scenic resources within a state scenic highway.

The Project would demolish an existing three-story office building containing approximately 637,503 square feet of floor area and a 1,952-stall surface parking lot and construct a 181,500-square-foot parcel delivery facility, consisting of 163,350 square feet of warehouse space and 18,150 square feet of ancillary office space, on a 31.52-acre site. The proposed facility would be a single-story building with a maximum height of 44 feet and a FAR of 0.14. As such, the Project would replace the existing office uses with a substantially smaller single-story building structure, resulting in less development intensity. In addition, the Project's structures would be similar to the existing light industrial development surrounding the Project Site, which include research and development, light manufacturing and processing, offices, light warehousing and storage, high-technology production, and other related uses. As such, the Project would not significantly alter the character of the Project Site or surrounding area. In addition, the proposed parcel delivery facility, ancillary office, and parking uses are consistent with the General Plan Light Industrial and Mixed Use II land use designations as well as the M-1 and MU-II zones, and the Project has been designed to comply with all applicable General Plan goals, objectives, and policies; zoning regulations; and community design guidelines. Therefore, the Project would not conflict with applicable zoning and other regulations governing scenic quality.

Relative to light and glare impacts, the Project's light sources would be similar to the existing light sources of the Project Site and surrounding uses and roadways. Considering the existing sources of lighting on the Project Site and in the surrounding vicinity, the amount and intensity of nighttime lighting proposed on-site would not adversely impact the nighttime or daytime views in the area. In addition, the Project would not include highly reflective building materials or architectural treatments that could cause substantial daytime glare. The proposed solar panels would absorb rather than reflect sunlight. Therefore, the Project would not create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

Based on the above, the Project would result in no impacts or less than significant impacts related to aesthetics and further analysis of this topic is not warranted in the EIR.

- **AGRICULTURE AND FORESTRY RESOURCES:** Based on the California Department of Conservation's California Important Farmland Finder⁴, the Project Site is located entirely within lands designated as "Urban and Built-Up Land." Therefore, the Project Site is not in an area of Prime Farmland, Unique Farmland, Farmland of Statewide Importance, Farmland of Local Importance, Farmland of Local Potential, or Grazing Land. In addition, there are no forest lands or timberlands within the Project area. Therefore, the Project would have no impacts related to agriculture and forestry resources and further analysis of this topic not warranted in the EIR.
- **BIOLOGICAL RESOURCES:** The Project Site is located within an urbanized area surrounded by light industrial uses and is currently developed with a three-story office building and surface parking lot. Therefore, candidate, sensitive, or special status species; riparian habitat or other sensitive natural communities; state or federally-protected wetlands; and established native resident or migratory wildlife corridors do not exist on the Project Site. Further, on-site vegetation is limited to ornamental landscaping. According to Figure CR-1 Parks and Open Space Plan, in Chapter 4: Community Resources of the General Plan, there are no creeks, streams, or drainage channels that traverse the Project Site. In addition, the Project Site is not located within a regional wildlife corridor or wildlife corridor crossing according to Figure CR-3 Regional Wildlife Corridors, in Chapter 4: Community Resources of the General Plan. Moreover, the Project Site is not located within or

0000

HP

SECURITY

adjacent to an existing or proposed Natural Community Conservation Plan/Habitat Conservation Plan (NCCP/HCP), including the NCCP/HCP Central and Coastal Subregion of Orange County.⁵ Therefore, the Project would result in no impacts or less than significant impacts related to biological resources and further analysis is not warranted in the EIR.

- **CULTURAL RESOURCES:** The Project Site is currently developed with a three-story office building and surface parking lot. According to Figure CR-6 Historic Resources in Chapter 4: Community Resources of the General Plan, the Project Site is not located within a historic district and there are no historical resources on or adjacent to the Project Site. Furthermore, based on the existing building's early 1980s construction date⁶ and the developed nature of the Project Site, it is not anticipated that any historical or archaeological resources exist onsite. In addition, the Project would be required to comply with California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98 in the event of discovery of human remains, which would ensure that impacts would be less than significant. Therefore, the Project would result in no impacts or less than significant impacts related to cultural resources and further analysis is not warranted in the EIR.
- **GEOLOGY AND SOILS:** According to Figure 13 Geologic and Seismic Hazards in Chapter 6: Public Safety of the General Plan, the Project Site is not located on an earthquake fault or within an Alquist Priofo Earthquake Fault Zone, within a liquefaction zone, or within a landslide zone. Based on the Geotechnical Report prepared for the Project, the probability of liquefaction and induced settlement at the Project Site is negligible and lateral spreading is unlikely to pose a significant hazard to the Project.⁷ The Project would be required to incorporate the recommendations contained in the Geotechnical Report pertaining to earthwork, grading, slopes, foundations, pavements, and other necessary geologic and seismic considerations into the design and construction of the Project in order to obtain the necessary permits, which would address any issues related to expansive soils and soil stability. Moreover, the Project would not create or exacerbate any geological hazards; therefore, the Project would not result in any environmental impacts pursuant to CEQA. The Project would also be required to comply with the National Pollution Discharge Elimination System (NPDES) permit and City grading requirements, which would include implementation of Best Management Practices (BMPs) that would address soil erosion during construction. Upon completion of the Project, the Project Site would be developed with the parcel delivery facility, surface parking, and landscaping and on-site soils would not be susceptible to erosion. In addition, all wastewater generated by the Project would be discharged into the City of Brea municipal sewer system. As such, no septic systems or other alternative wastewater disposal systems would be necessary as part of the Project. Furthermore, due to the existing development of the Project Site, on-site soils have been previously excavated and graded and it is not anticipated that any paleontological resources exist on site. Therefore, the Project would result in no impacts or less than significant impacts related to geology and soils and further analysis is not warranted in the EIR.
- **HYDROLOGY AND WATER QUALITY:** In accordance with Brea City Code (BCC) Section 13.32.030, the Project must comply with the Orange County Drainage Area Management Plan (DAMP) and reduce or eliminate pollutants in stormwater runoff from the Project Site. The Project has prepared a Preliminary Water Quality Management Plan (WQMP) that is consistent with the Orange County DAMP and NPDES permit requirements for the Santa Ana Region.⁸ Implementation of the BMPs contained in the WQMP would ensure that the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality.

According to the Geotechnical Report, the measured groundwater depths ranged from approximately 34 to 108 feet below ground surface (bgs) based on monitoring well readings performed between December 2020 and May 2021 in the formerly Brea Chemical Plan site, approximately one mile southwest of the Project Site.⁹ Borings were advanced to depths of approximately 95 feet bgs during the explorations conducted for the

⁵ California Department of Fish and Wildlife (CDFW). n.d. NCCP Plan Summary – County of Orange (Central/Coastal) NCCP/HCP. Accessed June 30, 2023. <https://wildlife.ca.gov/Conservation/Planning/NCCP/Plans/Orange-Coastal>.

ORANGE COUNTY CLERK-RECORDER DEPARTMENT

rv.

tv

DEPUTY

Geotechnical Report, but no groundwater was encountered.¹⁰ The Project would require excavation to a depth of approximately 22 feet bgs. Therefore, the Project is unlikely to encounter groundwater or decrease groundwater supplies.

According to the Preliminary Hydrology Report prepared for the Project, the existing drainage pattern which generally flows from northeast to southwest would be largely maintained post-development.¹¹ The imperviousness of the Project Site would slightly increase; however, the Project would install biotreatment BMPs, infiltration BMPs, and detention chambers to address the increased runoff.¹² According to Figure 11 Flood Hazard Zones in Chapter 6: Public Safety of the General Plan, the Project Site is located within FEMA Flood Zone X – Area of Minimal Flood Hazard. In addition, based on Figure 12 Location of Reservoirs and Dams and Flood Plain and Dam Inundations Areas in Chapter 6: Public Safety of the General Plan, the Project Site is not located in an inundation area. Therefore, the Project would not result in release of pollutants due to Project inundation.

Based on the above, the Project would result in no impacts or less than significant impacts related to hydrology and water quality and further analysis is not warranted in the EIR.

LAND USE AND PLANNING: the Project Site is developed with a three-story office building that was formerly occupied by Bank of America. The Project proposes to demolish the existing building and construct a parcel delivery facility that would be centrally located on the Project Site similar to the existing building. None of the proposed Project components would constitute a barrier that would physically divide an established community and no new linear features are included in the Project. Access to and movement throughout the Project area and the City would not be physically impaired due to the Project.

The northern 24.52-acre portion of the Project Site is zoned Light Industrial (M-1), and the southern 7-acre portion of the site is zone Mixed-Use II (MU-II). Per the BCC, M-1 zoning permits an array of light industrial uses, including warehouse and storage, and MU-II zoning permits a mix of commercial, residential, and parking uses. Both M-1 and MU-II zones permit a maximum height of 60 feet. The Project is consistent with the applicable General Plan land use designation and would not otherwise conflict with the General Plan. Furthermore, the Project Site is not within an area where special land use policies or zoning standards have been created and the Project would not conflict with goals, objectives, or policies adopted for the purpose of avoiding or mitigating environmental effects.

Based on the above, the Project would not divide an established community, nor would it conflict with an applicable land use plan, policy, or regulation established for the purpose of avoiding or mitigating an environmental effect. Therefore, the Project would result in no impact or a less than significant impact related to land use and planning and further analysis is not warranted in the EIR.

- **MINERAL RESOURCES:** According to the California Department of Conservation, the Project Site is mapped as Mineral Resource Zone 3 (MRZ-3) wherein the significance of mineral deposits is undetermined.¹³ The City of Brea does not designate any locally important mineral resource recovery site in its general plan or other land use plan. In addition, the Orange County General Plan does not identify the Project Site as a mineral resource area in Figure VI-3, *Orange County Mineral Resources*. Further, the Project Site has no history of use as a mineral resource recovery operation and is located in a predominantly developed area of the City. Therefore, the Project would have no impacts related to mineral resources and further analysis is not warranted in the EIR.
- **POPULATION AND HOUSING:** The Project proposes to demolish the existing three-story office building to construct a parcel delivery facility on the Project Site. The Project would not construct new homes on the Project Site or extend roads or other infrastructure. Although the Project would create a maximum of 800 employment opportunities that would increase the daytime population at the Project Site, it is anticipated that

ORANGE COUNTY CLERK-RECORDER DEPARTMENT

BY: tp DEPUTY

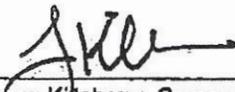

POSTED

these jobs would be filled by the existing regional workforce. The increase in employment opportunities would improve the City's job-housing balance. Therefore, the Project would not induce substantial unplanned population growth in the City or displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere. As such, the Project would have no impact or a less than significant impact related to population and housing and further analysis is not warranted in the EIR.

- **PUBLIC SERVICES (Schools, Parks, Other Public Facilities):** The Project does not include residential uses and would not generate a residential population on the Project Site that would utilize schools, parks and recreational facilities, or other public facilities such as libraries in the City. Therefore, the Project would have no impact related to these public services and further analysis is not warranted in the EIR.
- **RECREATION:** The Project does not include residential uses and would not generate a residential population on the Project Site that would increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. Moreover, the Project does not include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment. As such, the Project would have no impact related to recreation and further analysis is not warranted in the EIR.
- **UTILITIES AND SERVICE SYSTEMS:** The existing building on the Project Site is served by existing water, wastewater, stormwater drainage, electric power, natural gas, and telecommunication facilities. No new utility connections would be required with Project implementation. The Brea Public Works Department would continue to provide water, sewer, and storm drain services to the Project Site. Wastewater treatment would be provided by Orange County Sanitation District and the City contracts with Republic Services for trash removal and disposal. Southern California Edison and SoCalGas Company would continue to provide electric services and natural gas services to the Project Site, respectively. As such, the Project Site would be adequately served by all required utilities and services. In addition, the Project would comply with the City's solid waste reduction programs, which are designed to comply with federal, state, and local statutes and regulations related to solid waste. Therefore, the Project would result in less than significant impacts related to utilities and service systems and further analysis is not warranted in the EIR.
- **WILDFIRE:** According to the California Department of Forestry and Fire Protection (CalFire) Fire Hazard Severity Zone Viewer¹⁴ and the Orange County State Responsibility Area Fire Hazard Severity Zones map¹⁵, the Project Site is not located in a Very High Fire Hazard Severity Zone (VHFHZ). Figure 9 Fire Hazard Severity Zones in Chapter 6: Public Safety of the General Plan also shows that the Project Site is not located in a VHFHZ. In addition, according to Figure 10 Emergency Evacuation Access in Chapter 6: Public Safety of the General Plan, the Project Site is not in an area of concern for emergency evacuation access. The Project would be required to comply with the provisions of the Brea Fire Code (BCC Chapter 16.04), which incorporates by reference the California Fire Code. Compliance with the Brea Fire Code would ensure that access for emergency vehicles would be maintained during construction and operation and fire protection systems would be installed in the proposed building. Therefore, the Project would result in less than significant impacts related to wildfire and further analysis is not warranted in the EIR.

Figure 1

From: [Jay Kim](#)
To: [Newton, Jessica](#)
Subject: Written Comment regarding NOP - Amazon Parcel Delivery Facility
Date: Saturday, July 15, 2023 7:52:34 PM

Hi below is my written comment,

I have lived in the La Floresta community since it's inception in 2016.

Our area is a highly desirable area for families to raise their children in a safe and quiet environment.

I adamantly oppose the Amazon Parcel Delivery Facility as it will operate 24 hours a day, 7 days a week. Specifically, the NOP states that hauling trucks will be operation from 10pm to 8am. This will cause traffic issues and noise pollution to make it hard for residents to sleep.

There needs to be a serious traffic study as residents will be driving with line haul trucks to get to Brea Olinda Elementary School and Brea Olinda High School. Our community is filled with residents who walk and ride their bikes in the neighborhood. This Amazon facility will disrupt our peaceful neighborhood and create an unsafe environment for pedestrians.

Amazon centers belong in commercial and industrial areas near freeways like Fontana and Rialto, not in the middle of quiet neighborhoods. If this project moves forward, residents will speak up against this as this will create traffic stress and accidents on the 57 on/off ramps on Imperial and Lambert.

Property values will decrease due to this project. Protect Brea's peace and safety.

--

Thanks,

Jay Kim
Brea Resident

Subject: NOP Mailer re: Amazon Parcel Delivery Facility
Date: Tuesday, July 18, 2023 1:12:37 PM

Hello Jessica,

I'm a resident of the Buena Vida 55+ community that is part of the greater La Floresta development adjacent to the proposed Amazon facility. The recent NOP mailer I received seems to be missing some text at the end of the document. On page 7 of 8 the last sentence, under Population and Housing, states "... it is anticipated that". This, of course, is an incomplete sentence, so the notice seems to be missing a page (the back page includes a map only).

Best,

Dave Maxey

Subject: SWMSRCC [City of Brea, 275 Valencia Avenue] - Project Inquiry
Date: Tuesday, July 18, 2023 3:50:37 PM

Good afternoon Jessica,

Our office would like to inquire about the **City of Brea, 275 Valencia Avenue Project**. Can you confirm what entitlements and approvals are being sought for the Project? Per my review of the NOP that was issued, the entitlements were not provided.

In addition, in addition to the Scoping Meeting coming up on July 24, 2023, do you know what other hearing bodies the Project will come before?

Your assistance would be greatly appreciated. Thank you.

Best regards,

Re: 2023070241, Amazon Parcel Delivery Facility Project, Orange County

Dear Ms. Newton:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

[AB 52](#)

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

- 1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project:** Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

 - a. A brief description of the project.
 - b. The lead agency contact information.
 - c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
 - d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

- 2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report:** A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subs. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

 - a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

- 3. Mandatory Topics of Consultation If Requested by a Tribe:** The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

 - a. Alternatives to the project.
 - b. Recommended mitigation measures.
 - c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

- 4. Discretionary Topics of Consultation:** The following topics are discretionary topics of consultation:

 - a. Type of environmental review necessary.
 - b. Significance of the tribal cultural resources.
 - c. Significance of the project's impacts on tribal cultural resources.
 - d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

- 5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process:** With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

- 6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document:** If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

 - a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
 - b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

- 7. Conclusion of Consultation:** Consultation with a tribe shall be considered concluded when either of the following occurs:
- a.** The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
 - b.** A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).
- 8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document:** Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).
- 9. Required Consideration of Feasible Mitigation:** If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).
- 10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:**
- a.** Avoidance and preservation of the resources in place, including, but not limited to:
 - i.** Planning and construction to avoid the resources and protect the cultural and natural context.
 - ii.** Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
 - b.** Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
 - i.** Protecting the cultural character and integrity of the resource.
 - ii.** Protecting the traditional use of the resource.
 - iii.** Protecting the confidentiality of the resource.
 - c.** Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
 - d.** Protecting the resource. (Pub. Resource Code §21084.3 (b)).
 - e.** Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).
 - f.** Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).
- 11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource:** An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
- a.** The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.
 - b.** The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
 - c.** The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. **Tribal Consultation:** If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. **No Statutory Time Limit on SB 18 Tribal Consultation.** There is no statutory time limit on SB 18 tribal consultation.
3. **Confidentiality:** Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. **Conclusion of SB 18 Tribal Consultation:** Consultation should be concluded at the point in which:
 - a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
 - b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
 - a. If part or all of the APE has been previously surveyed for cultural resources.
 - b. If any known cultural resources have already been recorded on or adjacent to the APE.
 - c. If the probability is low, moderate, or high that cultural resources are located in the APE.
 - d. If a survey is required to determine whether previously unrecorded cultural resources are present.
2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
 - a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
 - b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
 - a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
 - b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
 - a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
 - b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
 - c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address:

Subject: NOP Amazon Parcel Delivery Facility
Date: Monday, July 24, 2023 3:37:35 PM

Dear City Board Members:

I am a 7-year resident of Brea, specifically residing in the community of La Floresta. Our home is directly aligned along Valencia Street. When I was a prospect resident of La Floresta, I was informed the Brea landfill traffic would be greatly reduced upon its closure within a few years. That proposed closer has now been extended. Having an Amazon Parcel Delivery facility directly across my home would just add further traffic and constant noise of large trucks. In addition, my son and the other neighborhood children walk to the nearby elementary 10 months out of the year. Seeing how the delivery drivers already zoom in and out of our Community streets, our kids are not safe while these trucks are on the road. Just last summer, in Irvine, a young child was struck and killed by an amazon delivery driver. Having this warehouse near the school is more of a potential risk. The proposed planed location of the new Amazon warehouse is also near the path of the Brea Trails where it is in constant use by people of all ages. The end of one of the segment trails would require individuals to have to come into direct contact of the constant trucks, plus the employees who are driving in and out of the warehouse. This doesn't seem very safe for pedestrians and those on bicycles and scooters. All it takes is one mistake. This can be prevented if this plan is not approved for this site. Brea has plenty of businesses in industrial areas. That is where The Amazon Parcel Delivery Facility should be placed, not in the pathway of homes and public trail parks where innocent people are liable to get hurt.

Thank you for your time and consideration

Subject: Feedback for the scope of the EIR related to Amazon
Date: Saturday, July 29, 2023 1:15:16 PM

Hello Jessica,

Thank you for getting back to me so quickly regarding the process for the scope of the EIR related to Amazon. I appreciate being able to provide feedback and would like to be put on the notification list regarding further official correspondence.

My concerns for the proposed Amazon warehouse in Brea regard the following:

- The site is designated as a light-industrial, low-intensity, or mixed-use II urban village. The Bank of America and any current warehouses nearby would likely fall into that level of zoning. Bringing in a large-scale warehouse like Amazon would change the composition of the existing industrial park and require re-zoning. Re-zoning could potentially bring in other large-scale companies and eventually make Brea a density-rich hub for the region.
- Bank of America did not operate 24/7 so that alone impacts the night-time noise from line-haul trucks which are also known as tractor-trailers. That level of activity, particularly at night, needs to be evaluated given the impact on residents on the east side of the site (trucks backing up to unload, forklifts being used, trucks idling while waiting to be unloaded, communication outside with others, etc.)
- Operating 24/7 requires night-time lighting that is not in significant use now and will have an impact on the same residents as above.
- The increase in harmful emissions from the increase in tractor-trailers, delivery drivers, etc. would be a concern to nearby residents, the youth who play in the sports park just north of the site, and all of the regional communities in driving up pollution. "[T]rucks ferrying this cargo release tremendous amounts of harmful particulate matter and smog-forming nitrogen oxides." *Fontana rejects warehouse proposal*, Los Angeles Times, 7/28/23
- There is an elementary school nearby.
- Brea is in an area where there is already impact from the emission of pollutants as there are still active oil wells that can emit methane and benzene. There are heavily congested freeways: 57, 60, 10, and 91, with traffic routinely backed up on the freeways as well as surface streets. The landfill has become much larger than originally designed and they are known to emit methane and carbon dioxide. Additionally, the large trucks carrying regional refuse add fuel emissions to the air.
- The above article describes the South Coast AQMD as requiring larger warehouses to provide mitigation factors such as installing solar panels, electric vehicle chargers or zero-emission forklifts, or else, paying a "pollution mitigation fee". Only 45% of the warehouse operators had responded by the AQMD deadline to report. If Amazon would be required by the AQMD to follow such rules, while important environmental actions to take, I do not believe they would mitigate the significant impact on air quality, traffic congestion, and the

environmental impacts already facing Breans and surrounding communities.

Thank you for this opportunity to provide written feedback regarding the proposed Amazon warehouse. Please add me to the email list for future correspondence.

Cc: [Sandra Spencer](#)
Subject: Amazon Parcel Delivery Facility Project
Date: Monday, August 7, 2023 4:00:15 PM

Hi Jessica,

My name is Sandra Spencer, I am a concerned resident of La Floresta Alterra/Castille.

My main concern and question about the upcoming project is this:

How does Amazon plan to circumvent the current Brea ordinance? Chapter 10.40: Trucks, Routes and Terminals Article I 10.40.050 Weights and Routes Designated (C) states: the following truck route is established for use by vehicles exceeding a maximum gross weight of six thousand (6,000) pounds from 6:00 a.m. to 8:00 p.m. during any day (Valencia Avenue, Northerly).

This is my main concern because my bedroom windows face west towards Valencia. Due to the current noise and dust from the trucks, I keep my windows closed from 6a-5p, Mon-Sat. With this proposed 24/7 project, I will never be able to open my windows again! This truly saddens me as I look forward to the fresh breeze that nightfall brings.

Also, although I do not underestimate that Amazon has done some form of route research themselves, I would like to know if they considered extending Surveyor to reach their loading docks? This of course would take them through private property, but that property is industrial and not residential. Negotiations could be made with that owner, with the thoughts and concerns of the community in mind. I am aware that turning lanes off Imperial would need to be adjusted, but I feel this is also feasible.

As a local resident, I look forward to future meetings, in hopes that my concerns be considered and addressed.

Thank you,

Sandra Spencer

Subject: Notice of Preparation (NOP) of an Environmental Impact Report (EIR) for the Amazon Parcel Delivery Facility Project

Dear Ms. Newton:

Thank you for providing the Orange County Transportation Authority (OCTA) with the Notice of Preparation of an EIR for the Amazon Parcel Delivery Facility Project. The following comments are provided for your consideration:

- This project is near several regional bicycle facilities, including a bicycle path which transitions from a Class I to a Class II facility at Surveyor Avenue:
 - Please consider incorporating bicycle parking for employees.
 - Recommend exploring the potential for incidents between Amazon facility associated traffic with cyclists at this juncture and consider safety concerns for cyclists of all ages.

Throughout the development of this project, we encourage communication with OCTA on any matters discussed herein. If you have any questions or comments, please contact me at (714) 560-5907 or at dphu@octa.net.

Sincerely,

Dan Phu

Subject: Amazon Facility EIR Scoping Comments
Date: Wednesday, August 9, 2023 2:04:48 PM

Jessica,

Following are my comments regarding the EIR scoping for the proposed Amazon facility adjacent to our neighborhood:

This may already be part of the plan for the consultant, but I want to confirm that the EIR for the La Floresta development, as well as the [EIR and recent MND](#) for the Alpha Olinda landfill, will be reviewed for pertinent facts to consider during the drafting of the EIR for the Amazon facility. In addition, any EIRs previously completed for industrial facilities in Brea near residential areas and/or schools should be reviewed to help inform the draft EIR content. An example would be the Whynter facility located at 3320 E. Birch St., directly across from the Brea Sports Park. The building at this address is approximately 210,000 square feet and has several line haul truck bays at the rear of the structure. It will be important to capture the cumulative impact of the adjacent light industrial zone, as well as that of the traffic on Imperial Hwy., and Valencia Ave. due to its status as the main route for big rigs to the landfill. These impacts should, of course, include air quality (especially the PM 2.5 category prevalent with diesel exhaust, brake dust, road dust), noise, and traffic.

Note: The NOP dated July 13, 2023, states – “The Applicant anticipates approximately 25 line haul trucks delivering packages to the Project Site each day, primarily between the hours of 10:00 p.m. to 8:00 a.m.” This is problematic for the homes adjacent to Valencia Ave., as some homeowners like to have their windows open at night since they cannot do so during the day because of the landfill traffic. The truck traffic overnight would pose a pollution, noise/vibration impact, forcing residents to close windows overnight.

The proposed Amazon facility would be located directly adjacent to a 55+ residential neighborhood. The proximity of the facility is probably not the main concern, though. It is the type of operation that will result in the impacts of the ingress and egress of vehicles as mentioned above and in the NOP. This is why there is justification for treating this project differently than other warehousing within the M-1 zoned areas near residential areas and schools.

Mitigation Measures

1. Require only electric line haul trucks and delivery vehicles to be used.
2. Restrict operating hours to 6:00 a.m. to 6:00 p.m.

Alternatives to the Project

1. Commercial-Professional office use (re-zoning should be considered since this property is directly adjacent to a residential area and near a school, both with many sensitive receptors).

Note: Amazon is certainly aware that nearby residents would not be happy about this type of facility and could still operate as a landlord for a more appropriate type of business at this site.

2. A warehouse that doesn't operate as a full-time distribution center.

3. Any other type of facility that qualifies under the M-1 zoning code.

Statement of Overriding Considerations

The health and safety of residents should be considered an overriding consideration above economics. I realize it is difficult to put a price tag on health and life, but the most important fiduciary duty of any government is to protect the health and safety of its residents. I understand that the City needs to have a balance of residential with commercial/industrial, and open space. However, I believe this balance can be attained without an Amazon "last mile" facility in this particular location, at least as it is currently proposed.

Best,

Dave Maxey

From: [Andrea Nesbitt](#)
To: [Newton, Jessica](#)
Subject: NOP proposed Amazon Distribution Center in east Brea
Date: Thursday, August 10, 2023 12:35:15 PM

Dear Jessica and Planning Commission,

I am writing to give my input into the proposed Amazon last-mile distribution center in Brea. I live in the Alterra-Castile neighborhood of the La Floresta community, which is located just south east of the Amazon property. Many of my neighbors have condos that face Valencia.

As I understand it, all deliveries and distribution vehicles will need to enter and exit Valencia Avenue via Nasa Street, which becomes La Floresta on the east side of Valencia.

When the Planning Commission is considering this proposed 24/7 operation by Amazon and the environmental impact on the surrounding community, they should factor in the current overcrowding of Valencia with trucks traveling to and from the landfill. Those trucks start lining up and idling as early as 5:30 a.m. and a steady flow of trucks continues throughout the day, six days a week. When we originally purchased our homes, we were told the landfill was scheduled to close in 2021, that has now been extended to 2036. No one close to Valencia can open their windows during the day due to noise and pollutants. Currently they can open them at night.

The proposed 24/7 distribution center would mean hundreds of additional trips down Valencia over 24 hours of every day. If we cannot stop them from having a distribution center, can we at least restrict their hours of operation?

Additionally, the Brea 265 project should also be taken into consideration since it will be adding 1156 additional residences over 10 years just north of the proposed Amazon facility.

As a community, La Floresta has more than the average number of sensitive receptors to pollution. There are many families with small children, an assisted living and memory care facility (Capriana) and a 55+ community (Buena Vida). Since the community is already dealing with large amounts of pollutants and noise from trucks going to and from the landfill, it does not make good sense to add more.

The addition of the Amazon last mile distribution facility would increase pollution, noise, and traffic and has the potential to lower property values in Brea and surrounding communities.

I hope that these concerns will be considered in the EIR and planning proceedings.

Sincerely,

Andrea Nesbitt

Subject: Amazon Opposition
Date: Thursday, August 10, 2023 3:47:50 PM

To the City of Brea,

As residents of the La Floresta Community, we would like to submit the following concerns in regards to the proposed Amazon facility on Valencia Dr.

- 1) Increase of Semi Truck traffic which will add to the already congested levels from the local Dump.
- 2) With the single entrance/exit to the facility, this will increase the traffic noise across from the exit from our community.
- 3) Increase of air pollution to our community.
- 4) Decrease of Property Values
- 5) Our Community will become a thoroughfare for trucks & cars from Imperial Hwy to La Floresta.

Ms Jessica Newton, Senior Planner
Community Relations
City of Brea
1 Civic Center Circle
Brea, CA 92821

Dear Ms Newton,

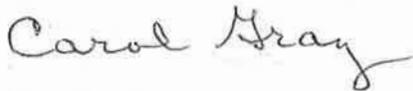

In 1980 my family moved from Fullerton to a home in Country Hills. We found our ideal home nestled up against the hills of Brea and we became part of the fast-growing city. As our children became adults and moved out, I became aware of a new development being planned – La Floresta. My husband passed away in 1996 and the development was very intriguing. I met with Jim Martinez, Project Manager, and I was fortunate enough to be part of a focus group that had input in the type of homes and retail being planned. I purchased a condo in the Alterra Castile area because it offered a single story.

When I purchased this home in 2016, I was assured by the selling agent that the landfill would be closing around 2021 and I would only have to put up with the trucks ferrying garbage up Valencia Avenue for a short time. NOW, the residents of La Floresta are faced with garbage trucks until around 2037 AND a possible Amazon warehouse that will be operating 24/7 with diesel trucks delivering at night and hundreds of smaller vans in and out of the facility all day long. My building (and primary bedroom) is right on Valencia and I cannot open my windows during the day and I won't be able to open them at night either.

Not only is the noise a problem but the extra trucks and vans will certainly cause more pollution. I as a senior citizen who suffers from asthma that is barely controlled and I'm very concerned about my health.

Brea is a wonderful city and I love living here but I'm hoping that the Planning Commission and City Council will reconsider having the Amazon warehouse just across the street from this great community.

Respectfully,

Carol Gray

Subject: Comments re: proposed Amazon Facility
Date: Friday, August 11, 2023 1:54:26 AM
Importance: High

Dear Jessica and the Planning Division,

As an original owner and resident in the Castile Alterra subdivision of La Floresta, I feel compelled to express my deep concerns regarding this proposed Amazon facility and its operations outlined in the NOP. I ask the planning division to consider in earnest the concerns and apprehensions shared by me as well as many others who may or may not have had the time or opportunity to express them in writing by the abbreviated deadline given.

NOISE: Using the Google Earth aerial site photo in the NOP, we live one 'layer' in from Valencia Ave (behind Alterra), on the first street in after Nasa becomes La Floresta. Though we have a building between us and Valencia, there is not one semi that barrels by on that street that is not heard from our upstairs bedrooms if even one window is open. The worst offenders are the ones that stop to turn left onto Nasa from Valencia. The squeak and hiss of breaks, the idling, the loud revving to make the left turn all contribute to the lack of peace on any given day. With what is proposed, however, this wouldn't be just a daytime annoyance. This would go on throughout the night, every single night at least 25 times robbing our community - who has in their CC&Rs quiet hours overnight - of the ability to sleep with any windows open. That doesn't even take into account the vibrations that come with the semis - again 25+ times every night. It goes without saying how disruptive the demolition and construction of this large of a facility will be noise-wise. The difference is usually once construction is done, a semblance of peace is restored - certainly not in this case.

AIR QUALITY: With the extension of the land fill lease, the number of trucks -trash and otherwise- has only increased. There is already a heightened concern for sensitive receptors in this community, Folks already can't have their windows open during the day because of the sound, exhaust and smell. What construction, semis and hundreds of delivery vehicles will do further threaten the air quality in this area and beyond MUST be thoroughly researched and taken into deep consideration. Is it really prudent to put something like this operation directly across from a 55+ community, homes with small children, and an assisted living facility?

TRAFFIC AND SAFETY: hundreds of delivery vans coming and going just across from a large residential community, as well as a large sports recreational facility and an elementary school doesn't make a lot of sense in the interest of safety. The more risks surrounding this facility, the higher the likelihood of a tragedy that could have been avoided had it been located in a strictly industrial area. Also, with Nasa St becoming La Floresta - the community's main thruway- after crossing Valencia, there is concern that delivery vans would use La Floresta as a short-cut through to Imperial. As a community that enjoys the outdoors, there are always walkers, runners, dog walkers and parents with kids out and about at any given time throughout the day. A

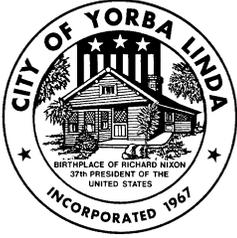

flurry of delivery vans cutting through our community could not only be disruptive, but unsafe for these resident pedestrians.

To be clear, a 24/7 Amazon delivery facility does not belong here. IF it became inevitable, there are several factors we'd strongly push for: 1. creating an alternate route that comes directly off Imperial into the compound, avoiding Valencia altogether. This is especially crucial for the 10PM-8AM semi traffic. 2. Require all vehicles be electric - including the semis 3. Make it a NON- 24/7 operation -it is not appropriate adjacent to a large residential community 4. Amazon pulls out and leases their owned property to another more appropriate 'light industrial' or commercial interest that maintains regular business hours.

Please consider these and the other items of concern from the community thoroughly in your review. Put yourselves in our shoes and see it from our perspectives. Would you want to live across from this?

Thank you,

Kathryn Bigelow

Re: Notice of Preparation for the Amazon Parcel Delivery Facility EIR

Dear Ms. Newton:

Thank you for the opportunity to review and comment on the above-referenced Notice of Preparation.

The City of Yorba Linda's has concerns relative to the issues of Air Quality and Transportation/Traffic. The Amazon Delivery Facility project has the potential to result in significant adverse impacts for each of these listed environmental factors that could, if not mitigated to thresholds considered less than significant, result in detrimental consequences to the "quality of life" for the residents of Yorba Linda.

In particular, the City is concerned about the potential impact on our roadway circulation and pavement condition caused by the proposed Amazon delivery trucks. In addition to the typical VMT analysis, we request the EIR also address the following: the number of trucks generated per day and in peak hours, truck routes, the size of the trucks being used, frequency, and the potential impact to the pavement condition of the roadway system in Yorba Linda. Please note that Imperial Highway is the only designated Truck Route in Yorba Linda. Oversize and overweight vehicles will be required to obtain a Transportation Permit.

The City of Yorba Linda believes that the Amazon Delivery Facility EIR must address these issues in a detailed, complete, and comprehensive manner to objectively analyze all environmental consequences of the various project alternatives and arrive at a land use decision that mitigates all potential impacts of concern to the City of Yorba Linda to levels less than the established thresholds for significance.

Thank you for the opportunity to comment on this Notice of Preparation. The City of Yorba Linda requests that we be provided regular updates as to the status of the project because of the City's proximity to the project site. Also, please notify us as to all actions to be taken regarding this project. The contact person for this project shall be:

Gabriel Diaz, Associate Planner

RE: City of Brea Notice of Preparation of an EIR - AMAZON PARCEL DELIVERY FACILITY PROJECT

Dear Ms. Newton,

This letter is submitted as a comment regarding the Notice of Preparation (NOP) for the proposed Amazon Parcel Delivery Facility Project (“the Project”) located at 275 Valencia Avenue on Assessor Parcel Numbers 320-233-17, 320-301-11, and 320-301-12 (Project Site) in the City of Brea. The Teamsters Union represents thousands of workers and their families who live and work in the City of Brea and surrounding communities. We are also here on behalf of the community allies and neighbors with whom we have been speaking and working in the area.

Project Description:

The Project would demolish the existing 637,503-square-foot Bank of America office building and surface parking lot to construct a 181,500-square-foot parcel delivery facility, consisting of 163,350 square feet of warehouse space and 18,150 square feet of ancillary office space, on a 31.52-acre site. The proposed facility would be a single-story building with a maximum height of 44 feet and FAR of 0.14. The Project would provide 1,064 vehicle parking spaces (consisting of 305 automobile spaces, 755 delivery van spaces, and four trailer truck spaces), 180 van loading spaces (90 loading spaces and 90 staging spaces), and 14 Utility Tractor Rig loading spaces to serve facility operations. The proposed facility would be generally located in the center of the Project Site and flanked by loading areas and surrounded by vehicle parking. The Project would be located close to thousands of residences which house many sensitive receptors.

General Air Quality:

Freight facilities, such as warehouse and distribution facilities, can result in high daily volumes of heavy-duty diesel truck traffic and operation of on-site equipment (e.g., forklifts and yard tractors) that emit toxic diesel emissions, and contribute to regional air pollution and global climate change.

Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis.

Operation of the proposed Project generates or attracts heavy-duty diesel-fueled vehicles. We would ask that the City perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment (“Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis”) can be found at:

<http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxicsanalysis>. An analysis of all toxic air contaminant impacts due to the use of equipment potentially generating such air pollutants should also be included.

Trip Generation / Fleet Composition:

We would recommend that the City not rely solely on the use of truck trip rates from the Institute of Transportation Engineers (ITE) for high cube warehouse projects located in the jurisdiction of the South Coast AQMD (i.e. 1.68 average daily vehicle trips per 1,000 square feet and 0.64 average daily truck trips per 1,000 square feet). Consistent with CEQA Guidelines, the Draft EIR for the Proposed Project may use a non-default trip rate if there is substantial evidence supporting another rate that is more appropriate for the air quality analysis. Such evidence exists and is available – increasingly, these high-cube warehouses have been found to generate a higher degree of, and differentiated mix of, vehicle trips than that indicated by the ITE manual.

This is important because of the chain of inferences that result by linking the ITE manual's trip generation figures to the potential air quality impact from indirect sources and/or mobile source emissions. The ITE manual assumes that approximately 14% of the trips generated by high-cube warehouses are truck trips. However, recent evidence shows why relying on default figures is problematic. The ITE published a study in 2016 stating that projects including high-cube warehouses should anticipate a fleet mix of up to 39% trucks. (See Institute of Transportation Engineers, *High-Cube Warehouse Vehicle Trip Generation Analysis* Oct. 2016 available at: <https://www.ite.org/pub/?id=a3e6679a%2De3a8%2Dbf38%2D7f29%2D2961becdd498>). This is just one instance that shows that the unique and high-intensity nature of last-mile distribution networks requires specific study, rather than reliance on default industry figures. While a lead agency has discretion in determining which sources to rely on in making its determinations of significant impacts and the mitigation measures necessary to address them, the conflicting information from the very sources the City is likely to rely on (i.e., the ITE) rises above a discretionary choice between two different sources; it would require *ignoring* more accurate evidence provided by the same source. Since the difference between 14% and 39% truck composition is of course substantial for a variety of reasons, including interaction with the mitigation measures and adequate understanding of health risks over the lifetime of the project, it is critical that the agency use more accurate and up-to-date information, specific to the type of project be proposed, to provide the public with meaningful information.

Please keep us up to date on the progress of the review. Thank you for your consideration.

Sincerely,

Andy Lee

August 11, 2023

Notice of Preparation of an Environmental Impact Report for the Amazon Parcel Delivery Facility Project (Proposed Project)

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Environmental Impact Report (EIR). Please send a copy of the EIR upon its completion and public release directly to South Coast AQMD as copies of the EIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, air quality modeling, and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

CEQA Air Quality Analysis

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website¹ as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod² land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds³ and localized significance thresholds (LSTs)⁴ to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road

¹ South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: <http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook>.

² CalEEMod is available free of charge at: www.caleemod.com.

³ South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf>.

⁴ South Coast AQMD's guidance for performing a localized air quality analysis can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds>.

mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA *operational* thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment⁵.

In the event that implementation of the Proposed Project requires a permit from South Coast AQMD, South Coast AQMD should be identified as a Responsible Agency for the Proposed Project in the EIR. The assumptions in the air quality analysis in the EIR will be the basis for evaluating the permit under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385.

South Coast AQMD staff is concerned about potential public health impacts of siting warehouses within close proximity of sensitive land uses, especially in communities that are already heavily affected by the existing warehouse and truck activities. The South Coast AQMD's Multiple Air Toxics Exposure Study (MATES V), completed in August 2021, concluded that the largest contributor to cancer risk from air pollution is diesel particulate matter (DPM) emissions⁶. According to the MATES V carcinogenic risk interactive map, the area surrounding the Proposed Project has an estimated cancer risk of over 427 in one million⁷. Operation of warehouses generates and attracts heavy-duty diesel-fueled trucks that emit DPM. When the health impacts from the Proposed Project are added to those existing impacts, residents living in the communities surrounding the Proposed Project will possibly face an even greater exposure to air pollution and bear a disproportionate burden of increasing health risks.

Mitigation Measures

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook,⁸ South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2022 Air Quality Management Plan,⁹ and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy.¹⁰

⁸ <https://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook>

⁹ South Coast AQMD's 2022 Air Quality Management Plan can be found at: <http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan> (Chapter 4 - Control Strategy and Implementation).

¹⁰ Southern California Association of Governments' 2020-2045 RTP/SCS can be found at:

https://www.connectsocial.org/Documents/PEIR/certified/Exhibit-A_ConnectSoCal_PEIR.pdf.

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should consider in the EIR may include the following:

- Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks such as the Advanced Clean Trucks Rule¹¹ and the Heavy-Duty Low NOx Omnibus Regulation¹², ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentivize the use of these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of 2010 model year¹³ that meet CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document, where appropriate. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards, and make the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.
- Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.
- Provide electric vehicle (EV) charging stations or at a minimum, provide the electrical infrastructure and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should consider in the EIR may include the following:

- Maximize use of solar energy by installing solar energy arrays.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Use of water-based or low VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113.

Design considerations for the Proposed Project that the Lead Agency should consider to further reduce air quality and health risk impacts include the following:

¹¹ CARB. June 25, 2020. *Advanced Clean Trucks Rule*. Accessed at: <https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks>.

¹² CARB has recently passed a variety of new regulations that require new, cleaner heavy-duty truck technology to be sold and used in state. For example, on August 27, 2020, CARB approved the Heavy-Duty Low NOx Omnibus Regulation, which will require all trucks to meet the adopted emission standard of 0.05 g/hp-hr starting with engine model year 2024. Accessed at: <https://ww2.arb.ca.gov/rulemaking/2020/hdomnibuslownox>.

¹³ CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: <https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>.

- Clearly mark truck routes with trailblazer signs, so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, day care centers, etc.).
- Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.
- Design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that there are no trucks queuing outside.
- Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.
- Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NO_x) and particulate matter (PM), including diesel PM. These emission reductions will reduce public health impacts for communities located near warehouses from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt in to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of the development of a 163,350-square-foot warehouse, the Proposed Project's warehouse owners and operators will be required to comply with Rule 2305 once the warehouse is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation¹⁴. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or waire-program@aqmd.gov. For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage¹⁵.

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at swang1@aqmd.gov

Sincerely,

Sam Wang

1.0 INTRODUCTION

This report documents the results of an Air Quality and Greenhouse Gas (GHG) Emissions Assessment, including a Health Risk Assessment (HRA), completed for the DJT4 Parcel Delivery Facility Project (Project), which proposes the demolition of an existing office building and the construction of 163,350 square feet of merchandise warehouse and storage space, 18,150 square feet of ancillary office space, vehicle parking spaces, bicycle parking spaces, and landscaping in the City of Brea, California. This assessment was prepared using methodologies and assumptions recommended in the rules and regulations of the South Coast Air Quality Management District (SCAQMD) and City of Brea. Regional and local existing conditions are presented, along with pertinent emissions standards and regulations. The purpose of this assessment is to estimate Project-generated criteria air pollutants and GHG emissions attributable to the Project and to determine the level of impact the Project would have on the environment and human health risk.

1.1 Project Location

The Project Site would be located at 275 Valencia Avenue in Brea, California on Assessor Parcel Numbers (APN) 320-233-17, 320-301-11, and 320-301-12. The land uses within the vicinity of the Project Site include existing industrial, office, and surface parking uses to the west, south, and north. More specifically, to the east and south-southeast, across Valencia Avenue, is La Floresta, a master-planned horizontal mixed-use community comprised of single-family residential, multi-family residential, and commercial uses. Primary regional access to the Project Site is provided via Imperial Highway/State Route (SR) 90, approximately 0.2 mile to the south of the Project Site and Carbon Canyon Road/SR 142 approximately 0.4 mile to the north of the Project Site. Local access to the Project Site is provided via Valencia Avenue, Surveyor Avenue, E. Birch Street, Nasa Street, and Enterprise Street.

1.2 Project Description

The Proposed Project would demolish the existing three-story 637,503-square-foot office building and surface parking lot to construct a 181,500-square-foot parcel delivery facility, consisting of 163,350 square feet of merchandise warehouse and storage space, 18,150 square feet of ancillary office space, short-term and long-term bicycle parking spaces, and 323,744 square feet of drought tolerant landscaping, on a 31.6-acre site. The Project would also provide 1,065 parking spaces (consisting of 304 automobile spaces, 757 delivery van spaces, and four trailer spaces), 180 ancillary van loading spaces, and 13 Utility Tractor Rig loading spaces to serve facility operations. The proposed facility would be centrally located on the site with loading areas and vehicle parking would surround the facility. The Project would locate its line haul truck loading/docking area and truck circulation route on the western portion of the Project Site to face other industrial uses. The Project would be required to provide a minimum of 399 trees on the Project Site.

The northern portion of the Project Site, encompassing approximately 24.2 acres, is designated as Light Industrial and zoned Light Industrial (M-1). Allowable uses include research and development, light manufacturing and processing, offices, warehousing and storage, logistics facilities, high-technology production, and related uses. The southern approximately 7.4-acre portion of the Project Site is designated as Mixed Use II and zoned Mixed-Use II (MU-II). The Mixed-Use II designation and MU-II zoning permits parking facilities as one of the allowed land uses. As such, the Project building would be located entirely

within the M-1 zone, and surface parking and drive aisles would be located within the M-1 and MU-II zoned portions of the Project Site.

The proposed facility would absorb portions of service areas that are currently covered by existing delivery stations in order to reduce the distance traveled by delivery vans throughout the region. The Project would operate 24 hours per day, 7 days per week to support delivery of packages to customer locations. On a daily basis, there would be a total of 231 associates, managers, and dispatchers who work shifts within the proposed facility; 345 van drivers; and 97 Amazon Flex drivers. Van drivers and Amazon Flex drivers would work shifts between the hours of 9:20 a.m. and 9:50 p.m. to deliver customer packages. In addition, it is anticipated that the Project Site would receive 31-line haul trucks delivering packages each day, between the hours of 10:00 p.m. to 8:00 a.m.

Construction of the Project would consist of demolition of the existing buildings, followed by grading and excavation to a depth of 21 feet below existing grade. It is estimated that approximately 25,680 cubic yards of soil would be exported from the Project Site during the grading phase. The building foundation would then be laid, followed by building construction, paving/concrete installation, and landscape installation. Project construction is anticipated to occur over a 24-month period and be completed in mid-2027.

2.0 AIR QUALITY

2.1 Air Quality Setting

Air quality in a region is determined by its topography, meteorology, and existing air pollutant sources. These factors are discussed below, along with the current regulatory structure that applies to the South Coast Air Basin (SoCAB), which encompasses the Project Site, pursuant to the regulatory authority of the SCAQMD.

Ambient air quality is commonly characterized by climate conditions, the meteorological influences on air quality, and the quantity and type of pollutants released. The air basin is subject to a combination of topographical and climatic factors that reduce the potential for high levels of regional and local air pollutants. The following section describes the pertinent characteristics of the air basin and provides an overview of the physical conditions affecting pollutant dispersion in the Project Area.

2.1.1 South Coast Air Basin

The California Air Resources Board (CARB) divides the State into air basins that share similar meteorological and topographical features. The Project Site lies in the SoCAB, which includes the non-desert portions of Los Angeles, Riverside, and San Bernardino counties and all of Orange County. The air basin is on a coastal plain with connecting broad valleys and low hills and is bounded by the Pacific Ocean on the southwest, with high mountains forming the remainder of the perimeter.¹

2.1.1.1 Temperature and Precipitation

The air basin is part of a semi-permanent high-pressure zone in the eastern Pacific. As a result, the climate is mild, tempered by cool sea breezes. This usually mild weather pattern is interrupted infrequently by periods of extremely hot weather, winter storms, and Santa Ana winds. The annual average temperature varies little throughout the 6,645-square-mile SoCAB, ranging from the low 60s to the high 80s, measured in degrees Fahrenheit (°F). With a more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas.²

In contrast to a very steady pattern of temperature, rainfall is seasonally and annually highly variable. Almost all annual rains fall between November and April. Summer rainfall is normally restricted to widely scattered thundershowers near the coast, with slightly heavier shower activity in the east and over the mountains.

2.1.1.2 Humidity

Although the SoCAB has a semiarid climate, the air near the earth's surface is typically moist because of the presence of a shallow marine layer. Except for infrequent periods when dry, continental air is brought

¹ SCAQMD. 1993. CEQA Air Quality Handbook.

² Ibid

into the SoCAB by offshore winds, the “ocean effect” is dominant. Periods of heavy fog, especially along the coast, are frequent, and low clouds, often referred to as high fog, are a characteristic climatic feature. Annual average humidity is 70 percent at the coast and 57 percent in the eastern portions of the SoCAB.³

2.1.1.3 Wind

Wind patterns across the south coastal region are characterized by westerly or southwesterly onshore winds during the day and by easterly or northeasterly breezes at night. Wind speed is higher during the dry summer months than during the rainy winter.

Between periods of wind, air stagnation may occur in both the morning and evening hours. Air stagnation is one of the critical determinants of air quality conditions on any given day. During the winter and fall, surface high-pressure systems over the SoCAB, combined with other meteorological conditions, can result in very strong, downslope Santa Ana winds. These winds normally continue a for few days before predominant meteorological conditions are reestablished.

The mountain ranges to the east affect the diffusion of pollutants by inhibiting the eastward transport of pollutants. Air quality in the SoCAB generally ranges from fair to poor and is similar to air quality in most of coastal Southern California. The entire region experiences heavy concentrations of air pollutants during prolonged periods of stable atmospheric conditions.⁴

2.1.1.4 Inversion

In conjunction with the two characteristic wind patterns that affect the rate and orientation of horizontal pollutant transport, two similarly distinct types of temperature inversions control the vertical depth through which pollutants are mixed. These inversions are the marine/subsidence inversion and the radiation inversion. The height of the base of the inversion at any given time is known as the “mixing height.” The combination of winds and inversions is a critical determinant leading to highly degraded air quality in the summer and generally good air quality in the winter in Orange County.⁵

2.1.2 Criteria Air Pollutants

Criteria air pollutants are defined as those pollutants for which the federal and state governments have established air quality standards for outdoor or ambient concentrations to protect public health with a determined margin of safety. Ozone (O₃), coarse particulate matter (PM₁₀), and fine particulate matter (PM_{2.5}) are generally considered to be regional pollutants because they or their precursors affect air quality on a regional scale. Pollutants such as carbon monoxide (CO), nitrogen dioxide (NO₂), and sulfur dioxide (SO₂) are considered to be local pollutants because they tend to accumulate in the air locally. Particulate

³ SCAQMD. 1993. CEQA Air Quality Handbook.

⁴ Ibid

⁵ Ibid

matter (PM) is also considered a local pollutant. Health effects commonly associated with criteria pollutants are summarized in Table 2-1.

Table 2-1. Criteria Air Pollutants- Summary of Common Sources and Effects		
Pollutant	Major Manmade Sources	Human Health & Welfare Effects
CO	An odorless, colorless gas formed when carbon in fuel is not burned completely; a component of motor vehicle exhaust.	Reduces the ability of blood to deliver oxygen to vital tissues, affecting the cardiovascular and nervous system. Impairs vision, causes dizziness, and can lead to unconsciousness or death.
NO ₂	A reddish-brown gas formed during fuel combustion for motor vehicles, energy utilities and industrial sources.	Respiratory irritant; aggravates lung and heart problems. Precursor to ozone and acid rain. Causes brown discoloration of the atmosphere.
O ₃	Formed by a chemical reaction between reactive organic gases (ROGs) and nitrous oxides (N ₂ O) in the presence of sunlight. Common sources of these precursor pollutants include motor vehicle exhaust, industrial emissions, solvents, paints and landfills.	Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield.
PM ₁₀ & PM _{2.5}	Power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles and others.	Increased respiratory symptoms, such as irritation of the airways, coughing, or difficulty breathing; aggravated asthma; development of chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility (haze).
SO ₂	A colorless, nonflammable gas formed when fuel containing sulfur is burned. Examples are refineries, cement manufacturing, and locomotives.	Respiratory irritant. Aggravates lung and heart problems. Can damage crops and natural vegetation. Impairs visibility.

Source: California Air Pollution Control Officers Association (CAPCOA 2013)

2.1.2.1 Carbon Monoxide

CO in the urban environment is associated primarily with the incomplete combustion of fossil fuels in motor vehicles. CO combines with hemoglobin in the bloodstream and reduces the amount of oxygen that can be circulated through the body. High CO concentrations can cause headaches, aggravate cardiovascular disease and impair central nervous system functions. CO concentrations can vary greatly over comparatively short distances. Relatively high concentrations of CO are typically found near crowded intersections and along heavy roadways with slow moving traffic. Even under the most severe meteorological and traffic conditions, high concentrations of CO are limited to locations within relatively short distances of the source. Overall CO emissions are decreasing as a result of the Federal Motor Vehicle Control Program, which has

mandated increasingly lower emission levels for vehicles manufactured since 1973. CO levels in the SoCAB are in compliance with the state and federal one- and eight-hour standards.

2.1.2.2 Nitrogen Oxides

Nitrogen gas comprises about 80 percent of the air and is naturally occurring. At high temperatures and under certain conditions, nitrogen can combine with oxygen to form several different gaseous compounds collectively called nitric oxides (NO_x). Motor vehicle emissions are the main source of NO_x in urban areas. NO_x is very toxic to animals and humans because of its ability to form nitric acid with water in the eyes, lungs, mucus membrane, and skin. In animals, long-term exposure to NO_x increases susceptibility to respiratory infections, and lowers resistance to such diseases as pneumonia and influenza. Laboratory studies show that susceptible humans, such as asthmatics, who are exposed to high concentrations can suffer from lung irritation or possible lung damage. Precursors of NO_x, such as NO and NO₂, are attributed to the formation of O₃ and PM_{2.5}. Epidemiological studies have also shown associations between NO₂ concentrations and daily mortality from respiratory and cardiovascular causes and with hospital admissions for respiratory conditions.

2.1.2.3 Ozone

O₃ is a secondary pollutant, meaning it is not directly emitted. It is formed when volatile organic compounds (VOCs) or ROGs and NO_x undergo photochemical reactions that occur only in the presence of sunlight. The primary source of ROG emissions is unburned hydrocarbons in motor vehicles and other internal combustion engine exhaust. NO_x forms because of the combustion process, most notably due to the operation of motor vehicles. Sunlight and hot weather cause ground-level O₃ to form. Ground-level O₃ is the primary constituent of smog. Because O₃ formation occurs over extended periods of time, both O₃ and its precursors are transported by wind and high O₃ concentrations can occur in areas well away from sources of its constituent pollutants.

People with lung disease, children, older adults, and people who are active can be affected when O₃ levels exceed ambient air quality standards. Numerous scientific studies have linked ground-level O₃ exposure to a variety of problems including lung irritation, difficult breathing, permanent lung damage to those with repeated exposure, and respiratory illnesses.

2.1.2.4 Particulate Matter

PM includes both aerosols and solid particulates of a wide range of sizes and composition. Of concern are those particles smaller than or equal to 10 microns in diameter size (PM₁₀) and smaller than or equal to 2.5 microns in diameter (PM_{2.5}). Smaller particulates are of greater concern because they can penetrate deeper into the lungs than larger particles. PM₁₀ is generally emitted directly because of mechanical processes that crush or grind larger particles or form the resuspension of dust, typically through construction activities and vehicular travel. PM₁₀ generally settles out of the atmosphere rapidly and is not readily transported over large distances. PM_{2.5} is directly emitted in combustion exhaust and is formed in atmospheric reactions between various gaseous pollutants, including NO_x, sulfur oxides (SO_x) and VOCs. PM_{2.5} can remain suspended in the atmosphere for days and/or weeks and can be transported long distances.

The principal health effects of airborne PM are on the respiratory system. Short-term exposure of high PM_{2.5} and PM₁₀ levels are associated with premature mortality and increased hospital admissions and emergency room visits. Long-term exposure is associated with premature mortality and chronic respiratory disease. According to the U.S. Environmental Protection Agency (USEPA), some people are much more sensitive than others to breathing PM₁₀ and PM_{2.5}. People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worse illnesses; people with bronchitis can expect aggravated symptoms; and children may experience decline in lung function due to breathing in PM₁₀ and PM_{2.5}. Other groups considered sensitive include smokers and people who cannot breathe well through their noses. Exercising athletes are also considered sensitive because many breathe through their mouths.

2.1.3 Toxic Air Contaminants

In addition to the criteria pollutants discussed above, toxic air contaminants (TACs) are another group of pollutants of concern. TACs are considered either carcinogenic or noncarcinogenic based on the nature of the health effects associated with exposure to the pollutant. For regulatory purposes, carcinogenic TACs are assumed to have no safe threshold below which health impacts would not occur, and cancer risk is expressed as excess cancer cases per one million exposed individuals. Noncarcinogenic TACs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis.

There are many different types of TACs, with varying degrees of toxicity. Sources of TACs include industrial processes such as petroleum refining and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Public exposure to TACs can result from emissions from normal operations, as well as from accidental releases of hazardous materials during upset conditions. The health effects of TACs include cancer, birth defects, neurological damage, and death.

CARB has identified diesel particulate matter (DPM) as a TAC. DPM differs from other TACs in that it is not a single substance but rather a complex mixture of hundreds of substances. Diesel exhaust is a complex mixture of particles and gases produced when an engine burns diesel fuel. DPM is a concern because it causes lung cancer; many compounds found in diesel exhaust are carcinogenic. DPM includes the particle-phase constituents in diesel exhaust. The chemical composition and particle sizes of DPM vary between different engine types (heavy-duty, light-duty), engine operating conditions (idle, accelerate, decelerate), fuel formulations (high/low sulfur fuel), and the year of the engine.⁶ Some short-term (acute) effects of diesel exhaust include eye, nose, throat, and lung irritation, and diesel exhaust can cause coughs, headaches, light-headedness, and nausea. DPM poses the greatest health risk among the TACs; due to their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung.

⁶ USEPA. 2022. Health Assessment Document for Diesel Engine Exhaust.
<https://nepis.epa.gov/Exe/ZyPURL.cgi?Dockey=300055PV.TXT>.

2.1.4 Ambient Air Quality

Ambient air quality at the Project Site can be inferred from ambient air quality measurements conducted at nearby air quality monitoring stations. CARB maintains more than 60 monitoring stations throughout California. O₃, PM₁₀ and PM_{2.5} are the pollutants most potently affecting the Project region. The La Habra air quality monitoring station, located at 621 W. Lambert Road, approximately 5.9 miles west of the Project Site, is the most representative monitoring station for ambient concentrations of O₃ for the Project Site. The Anaheim - Loara School air quality monitoring station, located at 1630 Pampas Lane, approximately 7.7 miles southwest of the Project Site, is the most representative monitoring station for ambient concentrations of PM_{2.5}, PM₁₀, and NO₂. Ambient emission concentrations will vary due to localized variations in emission sources and climate and should be considered “generally” representative of ambient concentrations in the Project Area. The La Habra air quality monitoring station and the Anaheim - Loara School air quality monitoring station do not monitor concentrations of CO, SO₂, or lead (Pb).

Table 2-2 summarizes the published data concerning O₃ from the La Habra air quality monitoring station and data concerning PM_{2.5}, PM₁₀ and NO₂ from the Anaheim – Loara School monitoring station.

Table 2-2. Summary of Ambient Air Quality Data			
Pollutant Standards	2020	2021	2022
O₃ – La Habra Monitoring Station			
Max 1-hour concentration (ppm)	0.171	0.103	0.106
Max 8-hour concentration (ppm) (state/federal)	0.114 / 0.113	0.075 / 0.075	0.087 / 0.087
Number of days above 1-hour standard (state)	15	2	1
Number of days above 8-hour standard (state/federal)	23 / 23	3 / 2	4 / 3
PM₁₀ - Anaheim – Loara School Monitoring Station			
Max 24-hour concentration (µg/m ³) (state/federal)	74.5 / 74.8	63.3 / 63.6	66.7 / 67.0
Number of days above 24-hour standard (state/federal)	* / *	5.7 / 0.0	* / *
PM_{2.5} - Anaheim – Loara School Monitoring Station			
Max 24-hour concentration (µg/m ³) (state/federal)	64.8 / 60.2	54.4 / 54.4	33.1 / 33.1
Number of days above federal 24-hour standard	12.0	10.0	0.0
NO₂ - Anaheim – Loara School Monitoring Station			
	2020	2021	2022
Annual 24-hour concentration (µg/m ³) (state/federal)	N/A	30 / 30	28 / 29
Number of days above standard (state/federal)	N/A	0 / 0	0 / 0

Source: CARB 2023

µg/m³ = micrograms per cubic meter; ppm = parts per million

* = Insufficient data available

N/A = not available

The USEPA and CARB designate air basins or portions of air basins and counties as being in “attainment” or “nonattainment” for each of the criteria pollutants. Areas that do not meet the standards are classified as nonattainment areas. The National Ambient Air Quality Standards (NAAQS) (other than O₃, PM₁₀ and PM_{2.5} and those based on annual averages or arithmetic mean) are not to be exceeded more than once per year. The NAAQS for O₃, PM₁₀, and PM_{2.5} are based on statistical calculations over one- to three-year periods, depending on the pollutant. The California Ambient Air Quality Standards (CAAQS) are not to be exceeded during a three-year period. The attainment status for the Orange County portion of the SoCAB, which encompasses the Project Site, is included in Table 2-3.

Table 2-3. Attainment Status of Criteria Pollutants in the Orange County Portion of the SoCAB

Pollutant	State Designation	Federal Designation
O ₃	Nonattainment	Nonattainment
PM ₁₀	Nonattainment	Attainment
PM _{2.5}	Nonattainment	Nonattainment
CO	Attainment	Unclassified/Attainment
NO ₂	Attainment	Unclassified/Attainment
SO ₂	Attainment	Unclassified/Attainment
Pb	Attainment	Unclassified/Attainment

Source: CARB 2022

The determination of whether an area meets the state and federal standards is based on air quality monitoring data. Some areas are unclassified, which means there is insufficient monitoring data for determining attainment or nonattainment. Unclassified areas are typically treated as being in attainment. Because the attainment/nonattainment designation is pollutant-specific, an area may be classified as nonattainment for one pollutant and attainment for another. Similarly, because the state and federal standards differ, an area could be classified as attainment for the federal standards of a pollutant and as nonattainment for the state standards of the same pollutant. The region is designated as a nonattainment area for the federal O₃ and PM_{2.5} standards and is also a nonattainment area for the state standards for O₃, PM_{2.5} and PM₁₀.⁷

2.1.5 Sensitive Receptors

Sensitive receptors are defined as facilities or land uses that include members of the population who are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis.

The nearest sensitive receptors to the Project Site include residences across Valencia Avenue, approximately 116 feet (37 meters) from the Project Site. Additionally, Olinda Elementary School is located approximately 920 feet northwest, and Brea Sports Park is located approximately 520 feet north for the Project Site. There are no additional sensitive receptors within 1,000 feet of the Project Site.

⁷ CARB. 2022. State and Federal Area Designation Maps. <http://www.arb.ca.gov/desig/adm/adm.htm>.

2.2 Regulatory Framework

2.2.1 Federal

2.2.1.1 Clean Air Act

The Clean Air Act (CAA) of 1970 and the CAA Amendments of 1971 required the USEPA to establish the NAAQS, with states retaining the option to adopt more stringent standards or to include other specific pollutants.

These standards are the levels of air quality considered safe, with an adequate margin of safety, to protect the public health and welfare. They are designed to protect those “sensitive receptors” most susceptible to further respiratory distress such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. Healthy adults can tolerate occasional exposure to air pollutant concentrations considerably above these minimum standards before adverse effects are observed.

The USEPA has classified air basins (or portions thereof) as being in attainment, nonattainment, or unclassified for each criteria air pollutant, based on whether or not the NAAQS have been achieved. If an area is designated unclassified, it is because inadequate air quality data were available as a basis for a nonattainment or attainment designation. Table 2-3 lists the federal attainment status of the SoCAB for the criteria pollutants.

2.2.2 State

2.2.2.1 California Clean Air Act

The California Clean Air Act (CCAA) allows the State to adopt ambient air quality standards and other regulations provided that they are at least as stringent as federal standards. CARB, a part of the California Environmental Protection Agency, is responsible for the coordination and administration of both federal and state air pollution control programs within California, including setting the CAAQS. CARB also conducts research, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB also has primary responsibility for the development of California’s State Implementation Plan (SIP), for which it works closely with the federal government and the local air districts.

2.2.2.2 California State Implementation Plan

The federal CAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as the SIP. The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The CAA Amendments dictate that states containing areas violating the NAAQS revise their SIPs to

include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The USEPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA.

- State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the USEPA for approval and publication in the Federal Register. The *2022 Air Quality Management Plan*⁸ is the SIP for the SoCAB. The 2022 AQMP is a regional blueprint for achieving air quality standards and healthful air in the SoCAB and those portions of the Salton Sea Air Basin that are under SCAQMD's jurisdiction. The 2022 AQMP includes aggressive new regulations and the development of incentive programs to support early deployment of advanced technologies. The two key areas for incentive programs are (1) promoting widespread deployment of available zero emission and low NO_x technologies and (2) developing new zero emission and ultra-low NO_x technologies for use in cases where the technology is not currently available. The 2022 AQMP prioritizes distribution of incentive funding in "environmental justice" areas and seek opportunities to focus benefits on the most disadvantaged communities. The 2022 AQMP focuses on available, proven, and cost-effective alternatives to traditional strategies, while seeking to achieve multiple goals in partnership with other entities promoting reductions in GHGs and toxic risk, as well as efficiencies in energy use, transportation, and goods movement. The AQMP relies on a regional and multi-level partnership of governmental agencies at the federal, state, regional, and local level. These agencies (USEPA, CARB, local governments, Southern California Association of Governments [SCAG] and the SCAQMD) are the primary agencies that implement the AQMP programs. The 2022 AQMP incorporates the latest scientific and technical information and planning assumptions, including SCAG's latest Regional Transportation Plan/Sustainable Communities Strategy, updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. The 2022 AQMP includes integrated strategies and measures to meet the NAAQS. The current status of the SIPs for the SoCAB's nonattainment pollutants are shown below:
- On November 28, 2007, CARB submitted a SIP revision to the USEPA for O₃, PM_{2.5} (1997 Standard), CO, and NO₂ in the SoCAB. This revision is identified as the "2007 South Coast SIP". The 2007 South Coast SIP demonstrates attainment of the federal PM_{2.5} standard in the SoCAB by 2014 and attainment of the federal eight-hour O₃ standard by 2023. This SIP also includes a request to reclassify the O₃ attainment designation from "severe" to "extreme". The USEPA approved the redesignation effective June 4, 2010. The "extreme" designation requires the attainment of the eight-hour O₃ standard in the SoCAB by June 2024. CARB approved PM_{2.5} SIP revisions in April 2011 and the O₃ SIP revisions in July 2011. The USEPA approved the PM_{2.5} SIP in 2013 and has approved 46 of the 61, 1997 eight-hour O₃ SIP requirements. In 2014, the USEPA proposed a finding that the SoCAB has attained the 1997 PM_{2.5} standards. In 2016, the USEPA determined that the SoCAB had attained the 1997 PM_{2.5} standards; however, the SoCAB was not redesignated as an attainment area because the

⁸ SCAQMD. 2022. 2022 Air Quality Management Plan.

USEPA had not approved a maintenance plan and additional requirements under the CAA had not been met.

- In 2012, the SCAQMD adopted the 2012 AQMP, which was a regional and multiagency effort (the SCAQMD, CARB, SCAG, and the USEPA). The primary purposes of the 2012 AQMP were to demonstrate attainment of the federal 24-hour PM_{2.5} standard by 2014 and to update the USEPA-approved eight-hour Ozone Control Plan. In 2012, the 2012 AQMP was submitted to CARB and the USEPA for concurrent review and approval for inclusion in the SIP. The 2012 AQMP was approved by CARB on January 25, 2013.
- In 2017, the SCAQMD adopted the 2016 AQMP. The 2016 AQMP includes strategies and measures to meet the following NAAQS:
 - 2008 eight-hour O₃ (75 parts per billion [ppb]) by 2013
 - 2012 Annual PM_{2.5} (12 µg/m³) by 2025
 - 1997 eight-hour O₃ (80 ppb) by 2023
 - 1979 one-hour O₃ (120 ppb) by 2022
 - 2006 24-hour PM_{2.5} (35 µg/m³) by 2019
- In 2022, the SCAQMD adopted the 2022 AQMP. In response to the USEPA lowering the primary and secondary O₃ standard levels to 70 ppb, the 2022 AQMP was developed to address the requirements for meeting this standard. The 2022 AQMP explores new and innovative ways to accomplish these goals through incentive programs, efficiency improvements, recognition of co-benefits from other programs, regulatory measures, and other voluntary actions.
- In addition to pollutants like O₃ and PM, the SIP also addresses Pb, which is a criteria pollutant under the NAAQS. Lead emissions primarily result from industrial sources, such as metal processing facilities and battery manufacturing. Lead was one of the first pollutants regulated under the SIP due to its severe health impacts, particularly on children. California's SIP includes specific strategies to reduce lead emissions and maintain compliance with the NAAQS for lead. The U.S. EPA's 2008 lead standard lowered the level to 0.15 µg/m³, and California's air districts, in collaboration with CARB, have implemented stringent controls to meet this standard in affected areas

2.2.2.3 Tanner Air Toxics Act & Air Toxics "Hot Spots" Information and Assessment Act

CARB's statewide comprehensive air toxics program was established in 1983 with Assembly Bill (AB) 1807, the Toxic Air Contaminant Identification and Control Act (Tanner Air Toxics Act of 1983). AB 1807 created California's program to reduce exposure to air toxics and sets forth a formal procedure for CARB to designate substances as TACs. Once a TAC is identified, CARB adopts an airborne toxics control measure (ATCM) for sources that emit designated TACs. If there is a safe threshold for a substance at which there is no toxic effect, the control measure must reduce exposure to below that threshold. If there is no safe threshold, the measure must incorporate toxics best available control technology to minimize emissions.

CARB also administers the State's mobile source emissions control program and oversees air quality programs established by state statute, such as AB 2588, the Air Toxics "Hot Spots" Information and Assessment Act of 1987. Under AB 2588, TAC emissions from individual facilities are quantified and prioritized by the air quality management district or air pollution control district. High priority facilities are required to perform a health risk assessment (HRA) and, if specific thresholds are exceeded, required to communicate the results to the public in the form of notices and public meetings. In September 1992, the "Hot Spots" Act was amended by SB 1731, which required facilities that pose a significant health risk to the community to reduce their risk through a risk management plan.

2.2.2.4 In-Use Off-Road Diesel-Fueled Fleets Regulation (Off-Road Regulations)

In November 2022, CARB approved amendments to the In-Use Off-Road Diesel-Fueled Fleets Regulation (Off-Road Regulation) aimed at further reducing emissions from the off-road sector. The amendments require fleets to phase-out use of the oldest and highest polluting off-road diesel vehicles in California; prohibit the addition of high-emitting vehicles to a fleet; and require the use of R99 or R100 renewable diesel in off-road diesel vehicles. Off-road vehicles subject to the amended rule are used in construction, mining, industrial operations, and other industries. The amended rule went into effect January 2024.

According to CARB (2022b), the amended rule will reduce harmful air pollutants from over 150,000 in-use off-road diesel vehicles that operate in California and is expected to yield \$5.7 billion in health benefits, prevent more than 570 air-quality related deaths and nearly 200 hospitalizations and emergency room visits from 2023 to 2038. From 2024 through 2038, the current amendments will generate an additional reduction above and beyond the current regulation of approximately 31,087 tons of NO_x and 2,717 tons of PM_{2.5} (CARB 2022b). About half of those additional reductions are expected to be realized within the first five years of implementation.⁹

2.2.2.5 Mobile Source Strategy

In 2016 CARB released the update to the Mobile Source Strategy (Strategy). This demonstrates how the state will meet air quality standards, achieve GHG emission reduction targets, decrease health risks from transportation emissions, and reduce petroleum consumption over the next 15 years. This includes engine technology that is effectively 90 percent cleaner than today's current standards, with clean, renewable fuels comprising half the fuels burned.

The strategy also relies on the increased use of renewable fuels to ensure that air pollutant reductions are achieved while meeting the ongoing demand for liquid and gaseous fuels in applications where combustion technologies remain, including in heavy-duty trucks and equipment and light-duty hybrid vehicles. The estimated benefits of the Mobile Source Strategy in reducing emissions from mobile sources includes an 80 percent reduction of O₃-forming emissions (ROG and NO_x), and a 45 percent reduction in DPM emissions

⁹ CARB. 2022. California Greenhouse Gas Emission Inventory 2023 Edition. <https://ww2.arb.ca.gov/ghg-inventory-data>.

in the SoCAB from current levels. Statewide, the Strategy would also result in a 45 percent reduction of GHG emissions and a 50 percent reduction in the consumption of petroleum-based fuels.

2.2.2.6 Governor's Sustainable Freight Action Plan

Under the Governor's Sustainable Freight Action Plan strategy, CARB is working with agency partners and stakeholders to implement a broad program that includes regulations, incentives, and policies designed to support the transformation to a more sustainable freight system and reduce community impacts from freight operations in California. The Governor's Sustainable Freight Action Plan identifies strategies and actions to achieve a sustainable freight transportation system that meets California's environmental, energy, mobility, safety and economic needs. The plan also identifies and initiates corridor-level freight pilot projects within the state's primary trade corridors that integrate advanced technologies, alternative fuels, freight and fuel infrastructure and local economic development opportunities. The plan seeks to improve the state freight system efficiency 25 percent by "increasing the value of goods and services produced from the freight sector, relative to the amount of carbon that it produces by 2030" as well as to deploy over 100,000 zero-emission freight vehicles and equipment and maximizing near-zero equipment and equipment powered by renewable energy by 2030.

2.2.2.7 Truck and Bus Regulation Reducing Emissions from Existing Diesel Vehicles

In 2008, CARB approved the Truck and Bus Regulation to significantly reduce PM and NOX emissions from existing diesel vehicles operating in California. The regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Heavier trucks had to be retrofitted with PM filters beginning January 1, 2012, and older trucks had to be replaced by January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010-model-year engines or equivalent.

The regulation applies to nearly all privately and federally owned diesel fueled trucks and buses and to privately and publicly owned school buses with a gross vehicle weight rating greater than 14,000 pounds. Small fleets with three or fewer diesel trucks can delay compliance for heavier trucks by reporting and there are a number of extensions for low-mileage construction trucks, early PM filter retrofits, adding cleaner vehicles, and other situations. Privately and publicly owned school buses have different requirements.

2.2.2.8 Heavy-Duty Vehicle Idling Emission Reduction Program

The purpose of CARB's ATCM to Limit Diesel-Fueled Commercial Motor Vehicle Idling is to reduce public exposure to DPM and criteria pollutants by limiting the idling of diesel-fueled commercial vehicles. The driver of any vehicle subject to this ATCM is prohibited from idling the vehicle's primary diesel engine for greater than five minutes at any location and is prohibited from idling a diesel-fueled auxiliary power system for more than five minutes to power a heater, air conditioner, or any ancillary equipment on the vehicle if it has a sleeper berth and the truck is located within 100 feet of a restricted area (homes and schools).

CARB Final Regulation Order, Requirements to Reduce Idling Emissions from New and In-Use Trucks, which began in 2008, requires that new 2008 and subsequent model-year heavy-duty diesel engines be equipped with an engine shutdown system that automatically shuts down the engine after 300 seconds of continuous

idling operation once the vehicle is stopped, the transmission is set to “neutral” or “park”, and the parking brake is engaged.

2.2.3 Local

2.2.3.1 South Coast Air Quality Management District

The SCAQMD is the air pollution control agency for Orange County and the urban portions of Los Angeles, Riverside, and San Bernardino counties, including the Project Site. The agency’s primary responsibility is ensuring that the NAAQS and CAAQS are attained and maintained in the SoCAB. The SCAQMD is also responsible for adopting and enforcing rules and regulations concerning air pollutant sources, issuing permits for stationary sources of air pollutants, inspecting stationary sources of air pollutants, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, awarding grants to reduce motor vehicle emissions, and conducting public education campaigns, as well as many other activities. All projects are subject to SCAQMD rules and regulations in effect at the time of construction.

The following is a list of noteworthy SCAQMD rules that are required of construction activities associated with the Proposed Project:

- **Rule 201 & Rule 203 (Permit to Construct & Permit to Operate)** – Rule 201 requires a “Permit to Construct” prior to the installation of any equipment “the use of which may cause the issuance of air contaminants . . .” and Regulation II provides the requirements for the application for a Permit to Construct. Rule 203 similarly requires a Permit to Operate.
- **Rule 212 (Standards for Approving Permits and Issuing Public Notice)**- This rule requires the applicant to show that the equipment used of which may cause the issuance of air contaminants or the use of which may eliminate, reduce, or control the issuance of air contaminants, is so designed, controlled, or equipped with such air pollution control equipment that it may be expected to operate without emitting air contaminates in violation of Section 41700, 4170 or 44300 of the Health and Safety Code or of these rules.
- **Rule 401 (Visible Emissions)** – This rule states that a person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any one hour which is as dark or darker in shade as that designated No. 1 on the Ringelmann Chart or of such opacity as to obscure an observer’s view.
- **Rule 402 (Nuisance)** – This rule prohibits the discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. This rule does not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals.

- **Rule 403 (Fugitive Dust)** – This rule requires fugitive dust sources to implement best available control measures for all sources, and all forms of visible PM are prohibited from crossing any property line. This rule is intended to reduce PM₁₀ emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. PM₁₀ suppression techniques are summarized below.
 - a) Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
 - b) All onsite roads will be paved as soon as feasible or watered periodically or chemically stabilized.
 - c) All material transported offsite will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
 - d) The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
 - e) Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the workday to remove soil tracked onto the paved surface.

- **Rule 1113 (Architectural Coatings)** – This rule requires manufacturers, distributors, and end-users of architectural and industrial maintenance coatings to reduce ROG emissions from the use of these coatings, primarily by placing limits on the ROG content of various coating categories.

- **Rule 1401 (New Source Review of Toxic Air Contaminants)** – This rule requires new source review of any new, relocated, or modified permit units that emit TACs. The rule establishes allowable risks for permit units requiring permits pursuant to Rules 201 and 203 discussed above.

- **Rule 1403 (Asbestos from Demolition/Renovation Activities)** – This rule requires owners and operators of any demolition or renovation activity and the associated disturbance of asbestos-containing materials, any asbestos storage facility, or any active waste disposal site to implement work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of asbestos-containing materials.

- **Rule 2305 (Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program)** – This rule applies to owners and operators of warehouses located in the SoCAB with greater than or equal to 100,000 square feet of indoor floor space in a single building. Key components of Rule 2305 include:
 - a) **Compliance and Reporting:** Warehouse owners and operators must submit annual Warehouse Actions and Investments to Reduce Emissions (WAIRE) reports and meet the Warehouse Point Compliance Obligation (WPCO).
 - b) **Points-Based System:** The WAIRE Program assigns points based on annual truck trips and warehousing activities. Warehouses can earn points by increasing visits from zero-emission or near-zero-emission trucks or by implementing other emission-reducing activities.

- c) **Mitigation Fee:** Warehouses that do not earn enough points must pay a mitigation fee, similar to a carbon tax.

Additionally, the SCAQMD has adopted the Clean Communities Plan (November 5, 2010), which is a planning document designed to reduce the exposure to air toxics and air-related nuisances throughout the SoCAB. The 2010 Clean Communities Plan is a planning document that outlines the overall control strategy for the SCAQMD's air toxics control program. The plan is the continuing effort and update to both the Air Toxics Control Plan developed in 2000 and the subsequent Addendum in 2004. The 2010 Clean Communities Plan is comprised of traditional source-specific control measures and measures to address cumulative toxic impacts that affect neighborhoods and communities within the SoCAB.

The SCAQMD has conducted an in-depth analysis of the TACs and their resulting health risks for all of Southern California. This study, the Multiple Air Toxics Exposure Study V (MATES V) shows that cancer risk has decreased more than 40 percent between MATES IV and MATES V (cancer risk decreased more than 50 percent between MATES III and MATES IV). MATES V is the most comprehensive dataset documenting the ambient air toxic levels and health risks associated with the SoCAB emissions. The MATES V study represents the baseline health risk for a cumulative analysis. MATES V estimates the average excess cancer risk level from TAC inhalation is 424 in one million basin-wide. These model estimates were based on monitoring data collected at 10 fixed sites within the SoCAB. None of the fixed monitoring sites are within the local area of the Project Site. However, MATES V has extrapolated the excess cancer risk levels throughout the basin by modeling the specific grids. MATES V modeling predicted an excess cancer risk of 415 in one million for the Project Area. DPM is included in this cancer risk along with all other TAC sources. DPM accounts for the majority of total risk shown in MATES V.

2.2.3.2 Southern California Association of Governments

On September 3, 2020, the SCAG Regional Council adopted the 2020 - 2045 Regional Transportation Plan/ Sustainable Communities Strategy (2020 RTP/SCS). The 2020 RTP/SCS charts a course for closely integrating land use and transportation – so that the region can grow smartly and sustainably. It was prepared through a collaborative, continuous, and comprehensive process with input from local governments, county transportation commissions, tribal governments, non-profit organizations, businesses and local stakeholders within the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. The 2020 RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental and public health goals. The SCAG region strives toward sustainability through integrated land use and transportation planning. The SCAG region must achieve specific federal air quality standards and is required by state law to lower regional GHG emissions. Specifically, the region has been tasked by CARB to achieve a 19 percent below 2005 per capita reduction by the end of 2035.

In April 2024, the SCAG Regional Council adopted the *2024-2050 Regional Transportation Plan/ Sustainable Communities Strategy* (2024 RTP/SCS). The 2024 RTP/SCS has not yet been adopted by CARB but builds off information provided in the 2020 RTP/SCS. The region has been tasked by CARB to achieve a 19 percent per capita reduction by the end of 2035.

2.2.3.3 City of Brea General Plan

The Community Resources Chapter of the City's General Plan provides goals, policies and actions designed to protect the area's regional resources, including air quality. The following are applicable to the Proposed Project:

Policy CR-13.6: Cooperate with the South Coast Air Quality Management District and Southern California Association of Governments in their efforts to implement the regional Air Quality Management Plan.

Policy CR-13.7: Work with other responsible federal, State, and County agencies to decrease air pollution emissions occurring within the air basin.

Policy CR-13.8: Cooperate and participate in regional air quality management planning, programs, and enforcement measures.

Implementation Measure: To reduce dust and particulate matter levels, implement SCAQMD's fugitive dust control measures such as:

- *Restricting outdoor storage of fine particulate matter;*
- *Controlling construction activities and emissions from unpaved areas; and*
- *Paving areas used for vehicle maneuvering.*

2.3 Air Quality Emissions Impact Assessment

2.3.1 Thresholds of Significance

The impact analysis provided below is based on the following California Environmental Quality Act (CEQA) Guidelines Appendix G thresholds of significance. The Project would result in a significant impact to air quality if it would do any of the following:

- 1) Conflict with or obstruct implementation of any applicable air quality plan.
- 2) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).
- 3) Expose sensitive receptors to substantial pollutant concentrations.
- 4) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

2.3.1.1 South Coast Air Quality Management District Regional Thresholds

The significance criteria established by the applicable air quality management or air pollution control district (SCAQMD) may be relied upon to make the above determinations. According to the SCAQMD, an air quality impact is considered significant if the Proposed Project would violate any ambient air quality standard,

contribute substantially to an existing or projected air quality violation, or expose sensitive receptors to substantial pollutant concentrations. The SCAQMD has established thresholds of significance for air quality for construction and operational activities of land use development projects such as that proposed, as shown in Table 2-4.

Table 2-4. SCAQMD Regional Significance Thresholds – Pounds per Day		
Air Pollutant	Construction Activities	Operations
Reactive Organic Gas (ROG/VOC)	75	55
Carbon Monoxide (CO)	550	550
Nitrogen Oxide (NO _x)	100	55
Sulfur Oxide (SO _x)	150	150
Coarse Particulate Matter (PM ₁₀)	150	150
Fine Particulate Matter (PM _{2.5})	55	55

Source: SCAQMD 1993 (PM_{2.5} threshold adopted June 1, 2007)

Air pollution is largely a cumulative impact. No single project is sufficient in size, by itself, to result in nonattainment of ambient air quality standards. Instead, a project’s individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project’s individual emissions exceed its identified significance thresholds, the project would be cumulatively considerable. Projects that do not exceed significance thresholds would not be considered cumulative considerable.

2.3.1.2 South Coast Air Quality Management District Localized Significance Thresholds

In addition to regional significance thresholds, the SCAQMD developed localized significance thresholds (LSTs) for emissions of NO₂, CO, PM₁₀, and PM_{2.5} generated at new development sites (offsite mobile source emissions are not included in the LST analysis protocol). LSTs represent the maximum emissions that can be generated at a project site without expecting to cause or substantially contribute to an exceedance of the most stringent national or state ambient air quality standards. LSTs are based on the ambient concentrations of that pollutant within the Project source receptor area (SRA), as demarcated by the SCAQMD, and the distance to the nearest sensitive receptor. The Project Site is located within SCAQMD SRA 16 (North Orange County). Table 2-5 shows the LSTs for a one-, two-, and five-acre project site in SRA 16 with sensitive receptors located within 25 meters of the Project Site. (The closest sensitive receptors to the Project Site are 37 meters distant at the nearest.)

Table 2-5. Local Significance Thresholds at 25 Meters of a Sensitive Receptor

Project Size	Pollutant (pounds per day) Construction / Operations			
	NO ₂	CO	PM ₁₀	PM _{2.5}
1 Acre	103 / 103	522 / 522	4 / 1	3 / 1
2 Acres	147 / 147	762 / 762	6 / 2	4 / 1
5 Acres	221 / 221	1,311 / 1,311	11 / 3	6 / 2

Source: SCAQMD 2009

2.3.1.3 Health Risk Thresholds

In addition to the emission of criteria air pollutants, this analysis evaluates the health risk from construction and operations of the Proposed Project; specifically, the potential exposure of nearby existing residents to DPM emissions emitted from heavy duty trucks.

The SCAQMD thresholds for what constitute an exposure of substantial air toxics are as follows.

- Cancer Risk: Emit carcinogenic or toxic contaminants that exceed the maximum individual cancer risk of 10 in one million.
- Non-Cancer Risk: Emit toxic contaminants that exceed the maximum hazard quotient of 1 in one million.

Cancer risk is expressed in terms of expected incremental incidence per million population. The SCAQMD has established an incidence rate of 10 persons per million as the maximum acceptable incremental cancer risk due to TAC exposure. This threshold serves to determine whether or not a given project has a potentially significant development-specific and cumulative impact. The 10-in-one-million standard is a very health-protective significance threshold. A risk level of 10 in one million implies a likelihood that up to 10 persons out of one million equally exposed people would contract cancer if exposed continuously (24 hours per day) to the levels of TACs over a specified duration of time. This risk would be an excess cancer that is in addition to any cancer risk borne by a person not exposed to these air toxics. To put this risk in perspective, the risk of dying from accidental drowning is 1,000 in a million, which is 100 times more than the SCAQMD's threshold of 10 in one million.

The SCAQMD has also established non-carcinogenic risk parameters for use in HRAs. Noncarcinogenic risks are quantified by calculating a "hazard index," expressed as the ratio between the ambient pollutant concentration and its toxicity or Reference Exposure Level (REL). An REL is a concentration at, or below which health effects are not likely to occur. A hazard index less than one (1.0) means that adverse health effects are not expected. Within this analysis, non-carcinogenic exposures of less than 1.0 are considered less than significant.

2.3.2 Methodology

Air quality impacts were assessed in accordance with methodologies recommended by the SCAQMD. Where criteria air pollutant quantification was required, emissions were modeled using the California Emissions Estimator Model (CalEEMod), version 2022.1. CalEEMod is a statewide land use emissions computer model designed to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects. Project construction-generated air pollutant emissions are calculated using a combination of CalEEMod model defaults for Orange County and information provided by the Project proponent, specifically the demolition square footage, construction of new square footage, construction equipment employed during each phase of construction, the construction schedule, and the amount of soil material that would be imported and exported from the site. Operational air pollutant emissions were based on the site acreage and building dimensions provided by the Project Site plans and daily trip numbers provided in the Vehicle Miles Traveled (VMT) Analysis Report prepared for the Project (NV5 Engineers & Consultants 2024). The VMT Report estimates that the Project's maximum daily vehicle generation would consist of 62 heavy duty truck trips, 1,152 passenger car trips, and 690 van trips. The average van trips length was taken from the Project's VMT Report (NV5 Engineers & Consultants 2024). The average truck trip length is calculated at 52 miles, which represents the average distance between the Project Site and the Port of Los Angeles/Long Beach, the Project Site and the Banning Pass, the Project Site and the San Diego County line, the Project Site and the Cajon Pass, and the Project Site and downtown Los Angeles, consistent with SCAQMD recommendation for calculating heavy-duty truck emissions. For the purposes of this analysis, operational emissions associated with the Project are compared to the existing baseline, which assumes the continuation of the Bank of America use and includes a 637,503 square foot office building and 1,949 parking spaces as well as 4,818 daily vehicle trips.¹⁰

Additionally, DPM concentrations and associated health risk associated with both construction off-road equipment and construction haul trucks during construction, as well as heavy-duty and medium-duty trucks for Project operations, were modeled using the HARP2 modeling program provided by CARB, with regulatory default settings, to perform the dispersion and health risk modeling for this analysis. HARP2 implements the latest regulatory guidance to develop inputs to the U.S. EPA AERMOD dispersion model for dispersion and as the inputs for calculations for the various health risk levels. AERMOD is a steady-state plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of both surface and elevated sources, and both simple and complex terrain. The resultant concentration values at vicinity sensitive receptors were then used to calculate chronic and carcinogenic health risk using the standardized equations contained in the Office of Environment Health Hazard Assessment (OEHHA) Guidance Manual for Preparation of Health Risk Assessments.¹¹

Project specific methodology is discussed further in Section 2.3.3.4.

¹⁰ NV5. 2024. Vehicle Miles Traveled Analysis for Brea Delivery Station.

¹¹ OEHHA. 2015. Guidance Manual for Preparation of Health Risk Assessments.

2.3.3 Impact Analysis

2.3.3.1 Project Construction-Generated Criteria Air Quality Emissions

Regional Construction Significance Analysis

Construction-generated emissions are temporary and short-term but have the potential to represent a significant air quality impact. The basic sources of short-term emissions that will be generated through construction of the Proposed Project will be from grading activities and the from the operation of the construction vehicles (i.e. trenchers, dump trucks). Construction activities such as excavation and grading operations, construction vehicle traffic, and wind blowing over exposed soils would generate exhaust emissions and fugitive PM emissions that affect local air quality at various times during construction. Effects would be variable depending on the weather, soil conditions, the amount of activity taking place, and the nature of dust control efforts. The dry climate of the area during the summer months creates a high potential for dust generation. Construction activities would be subject to SCAQMD Rule 403, which requires taking reasonable precautions to prevent the emissions of fugitive dust, such as using water or chemicals, where possible, for control of dust during the clearing of land and other construction activities.

Construction-generated emissions associated with the Proposed Project were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. As a project design feature, the Project will operate Tier 4 equipment or better for all engines above 50 horsepower during construction activities. All equipment must be tuned and maintained in compliance with the manufacturer's recommended maintenance schedule and specifications. All maintenance records for each equipment and their contractor(s) should be available for inspection and remain on-site during construction activities. See Attachment A for more information regarding the construction assumptions, including construction equipment, phasing and duration, used in this analysis.

Predicted maximum daily construction-generated emissions for the Proposed Project are summarized in Table 2-6. Construction-generated emissions are short-term and of temporary duration, lasting only as long as construction activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the SCAQMD's thresholds of significance.

Table 2-6. Construction-Related Emissions (Regional Significance Analysis)						
Construction Year	Pollutant (pounds per day)

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

Notes: Emissions taken of the season, summer or winter, with the highest outputs. Project construction generated emissions are calculated using a combination of CalEEMod model defaults for Orange County and information provided by the Project proponent, specifically the construction equipment and model years for equipment that would be employed during all phases of construction, the construction schedule, and the amount of soil material that would be exported from the site (25,680 cubic yards). The 13 tractor rig and 180 van queuing/loading spaces were accounted for in CalEEMod by increasing the total acreage of the modeled industrial and parking land use. Emission reduction/credits for construction emissions are applied based on the required implementation of SCAQMD Rule 403. The specific Rule 403 measures applied in CalEEMod include the following: sweeping/cleaning adjacent roadway access areas daily; washing equipment tires before leaving the construction site; water exposed surfaces three times daily; and limit speeds on unpaved roads to 25 miles per hour.

As shown in Table 2-6, emissions generated during Project construction would not exceed the SCAQMD's regional thresholds of significance. Therefore, criteria pollutant emissions generated during Project construction would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard, and no health effects from Project criteria pollutants would occur.

Localized Construction Significance Analysis

The nearest sensitive receptors to the Project Site are residences located across Valencia Avenue, approximately 37 meters distant at the nearest. LSTs were developed in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative (I-4). The SCAQMD provided the Final Localized Significance Threshold Methodology¹² for guidance. The LST methodology assists lead agencies in analyzing localized impacts associated with Project-specific level proposed projects.

As previously described, in addition to regional significance thresholds, the SCAQMD developed localized significance thresholds (LSTs) for emissions of NO_x, CO, PM₁₀, and PM_{2.5} generated at new development sites (offsite mobile source emissions are not included in the LST analysis protocol). LSTs were developed in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative. The SCAQMD Environmental Justice Enhancement Initiative program seeks to ensure that everyone has the right to equal protection from air pollution. The Environmental Justice Program is divided into three categories, with the LST protocol promulgated under Category I: *Further-Reduced Health Risk*. LST analysis for construction is applicable for all projects that disturb five acres or less in a single day. However, the Project is approximately 31.6 acres and therefore it is likely that construction onsite would disturb more than five acres in a single day. According to the equipment specified by the Project Applicant during the construction phases, it is likely that the construction process may disturb up to 15 acres daily. Therefore, applying the five-acre LST thresholds to projects disturbing greater acreage is conservative. For instance, the five-acre LST thresholds were developed in part based on the dispersion of pollutants over a five-acre construction area before exposing sensitive receptors. Thus, applying the five-acre LST thresholds to a project that could disturb a much greater daily acreage does not consider the pollutant-dispersing effect of the dispersion of pollutants over the entire Project Site before exposing receptors. While the Proposed Project could potentially disturb up to 15 acres on a single day, the LST threshold value for a five-acre site was employed from the LST lookup tables. This is conservative since the analysis will only consider the dispersion of air pollutants over five acres before reaching sensitive receptors, as opposed to accounting for the dispersion of air pollutants over a greater acreage.

LST thresholds are provided for distances to sensitive receptors of 25, 50, 100, 200, and 500 meters. The nearest sensitive receptors to onsite construction activity are residences located across Valencia Avenue, approximately 37 meters distant at the nearest. As such, the LST thresholds for sensitive receptors located at 25 meters are used in this analysis. The SCAQMD's methodology clearly states that "offsite mobile emissions from a project should not be included in the emissions compared to LSTs." Therefore, for purposes of the construction LST analysis, only emissions included in the CalEEMod "onsite" emissions outputs were considered. Table 2-7 presents the results of localized emissions for onsite construction associated with the Proposed Project.

Notes: Emissions taken of the season, summer or winter, with the highest outputs. Project construction generated emissions are calculated using a combination of CalEEMod model defaults for Orange County and information provided by the Project proponent, specifically the construction equipment and model years for equipment that would be employed during all phases of construction, the construction schedule, and the amount of soil material that would be exported from the site (25,680 cubic yards). Emission reduction/credits for construction emissions are applied based on the required implementation of SCAQMD Rule 403. The specific Rule 403 measures applied in CalEEMod include the following: sweeping/cleaning adjacent roadway access areas daily; washing equipment tires before leaving the construction site; water exposed surfaces three times daily; and limit speeds on unpaved roads to 25 miles per hour.

Table 2-7 shows that the emissions of these pollutants during construction would not result in significant concentrations of pollutants at nearby sensitive receptors. Therefore, significant impacts would not occur concerning LSTs during construction activities.

2.3.3.2 Project Operations Criteria Air Quality Emissions

Regional Operational Significance Analysis

Implementation of the Project would result in long-term operational emissions of criteria air pollutants such as PM₁₀, PM_{2.5}, CO, and SO₂ as well as O₃ precursors such as ROGs and NO_x. Project-generated increases in emissions would be predominantly associated with motor vehicle use. As previously described, operational air pollutant emissions were based on the building square footage from Project Site plans and traffic trip generation rates from the VMT Report by NV5 Engineers & Consultants.¹³ Long-term operational emissions attributable to the Project are identified in Table 2-8 and compared to the operational significance thresholds promulgated by the SCAQMD. Additionally, operational emissions associated with the Project

¹³ NV5. 2024. Vehicle Miles Traveled Analysis for Brea Delivery Station.

are compared to the existing baseline condition, which includes a 637,503 square foot office building and 1,949 parking spaces as well as 4,818 daily vehicle trips.¹⁴

Table 2-8. Operational-Related Emissions (Regional Significance Analysis)						
Emission Source	Pollutant (pounds per day)					
	ROG	NO_x	CO	SO₂	PM₁₀	PM_{2.5}

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

Notes: Emissions taken from the season, summer or winter, with the highest output. Emission projections predominately based on CalEEMod model defaults for Orange County, site acreage and building dimensions provided by the Project Site Plans, and maximum daily vehicle trips provided in the VMT Report by NV5 Engineers & Consultants 2024. Specifically, the Traffic Impact Assessment estimates the Project generation would consist of maximum 62 daily heavy-duty truck trips, 1,346 maximum daily passenger car trips, and 690 maximum daily van trips. The average van trips length was taken from the Project’s VMT Report (NV5 Engineers & Consultants 2024). The average Project truck trip length is calculated at 52 miles, which represents the average distance between the Project Site and the Port of Los Angeles/Long Beach, the Project Site and the Banning Pass, the Project Site and the San Diego County line, the Project Site and the Cajon Pass, and the Project Site and downtown Los Angeles. CalEEMod GHG emissions associated with the existing baseline condition account for a 637,503 square foot office building, 949 parking spaces and 4,818 daily vehicle trips (NV5 Engineers & Consultants 2024).

As shown in Table 2-8, the Project would result in less operational emissions across all emission sources compared to the existing baseline condition. The Project would result in a reduction of 27.04 pounds per day of ROG, 1.24 pounds per day of NO_x, 92.25 pounds per day of CO, 0.02 pounds per day of SO₂, 2.80 pounds per day of PM₁₀, and 0.85 pounds per day of PM_{2.5}. As such, the Project would not exceed any SCAQMD thresholds for any criteria pollutants during operation. The reduction in criteria air pollutants is mainly attributed to a reduction in maximum daily vehicle trips as the existing 637,503-square-foot office building generates 4,818 maximum daily vehicle trips compared to the 2,098 maximum daily vehicle trips generated by the Project.¹⁵ Additionally, the existing building on the Project Site, developed in 1990, was not constructed to meet the stringent energy efficiency standards currently mandated, including high-performance insulation, efficient windows, and advanced heating, ventilation, and air conditioning (HVAC) systems.

As identified in Table 2-3, the Orange County portion of the SoCAB is designated as a nonattainment area for the federal O₃ and PM_{2.5} standards and is also a nonattainment area for the state standards for O₃, PM_{2.5} and PM₁₀.¹⁶ O₃ is a health threat to persons who already suffer from respiratory diseases and can cause severe ear, nose and throat irritation and increases susceptibility to respiratory infections. PM can adversely affect the human respiratory system. As shown in Table 2-8, although the Proposed Project would result in emissions of the O₃ precursor pollutants ROG and NO_x, PM₁₀, and PM_{2.5}, the Proposed Project would generate less emissions than the existing baseline condition. Moreover, the correlation between a project’s emissions and increases in nonattainment days, or frequency or severity of related illnesses, cannot be accurately quantified. The overall strategy for reducing air pollution and related health effects in the SCAQMD is contained in the SCAQMD 2022 AQMP. The AQMP provides control measures that reduce emissions to attain federal ambient air quality standards by their applicable deadlines such as the

¹⁵ NV5. 2024. Vehicle Miles Traveled Analysis for Brea Delivery Station.

¹⁶ CARB. 2022. State and Federal Area Designation Maps. <http://www.arb.ca.gov/desig/adm/adm.htm>.

application of available cleaner technologies, best management practices, incentive programs, as well as development and implementation of zero and near-zero technologies and control methods. The CEQA thresholds of significance established by the SCAQMD are designed to meet the objectives of the AQMP and in doing so achieve attainment status with state and federal standards. As noted above, the Project would result in a net decrease in emissions of these pollutants and would not exceed the thresholds of significance established by the SCAQMD for purposes of reducing air pollution and its deleterious health effects.

Localized Operational Significance Analysis

According to the SCAQMD localized significance threshold methodology, LSTs would apply to the operational phase of a proposed project only if the project includes stationary sources (e.g., smokestacks) or attracts heavy-duty trucks that may spend long periods queuing and idling at the site (e.g., warehouse or transfer facilities). The Proposed Project would construct a 181,500-square-foot parcel delivery facility, consisting of 163,350 square feet of warehouse and storage space, 18,150 square feet of ancillary office space, and a parking lot and heavy-duty truck loading docks. Therefore, in the case of the Proposed Project, the operational phase LST protocol is applied. Operational LSTs apply to CO, NO₂, PM₁₀, and PM_{2.5}.

The nearest sensitive receptors to onsite construction activity are residences located across Valencia Avenue, approximately 37 meters distant at the nearest. LST thresholds are provided for distances to sensitive receptors of 25, 50, 100, 200, and 500 meters. LSTs for receptors located at 25 meters were utilized in this analysis as a conservative approach.

The appropriate SRA for the localized significance thresholds is SRA 16 (North Orange County) since this area includes the Project Site. As described, the SCAQMD has produced lookup tables for projects under five acres. The Proposed Project Site encompasses approximately 31.6 acres. For the purposes of this analysis, the LST value for a five-acre site from the SCAQMD's LST lookup tables was employed. This approach is conservative because it assumes the dispersion of air pollutants over only five acres before reaching sensitive receptors, as opposed to accounting for the dispersion of air pollutants over the greater 31.6-acre area. The five-acre LST thresholds were developed based on the dispersion of pollutants over a five-acre site before exposing sensitive receptors. Thus, by applying the five-acre threshold to a larger 31.6-acre site, it does not account for increased dispersion area, and therefore is a more stringent threshold than if it were specifically calculated for 31.6 acres. Therefore, this conservative assumption ensures a more protective assessment of localized operational air quality impacts.

For a worst-case scenario assessment, the emissions shown in Table 2-9 include all "onsite" project-related stationary (area) sources, energy sources, and standard 10 percent of the Project-related mobile sources. 10 percent would represent onsite movement of passenger automobiles, vans, and trucks on the Project Site. Considering that the trip length used for calculating mobile emissions for the Proposed Project is 52 miles for heavy duty trucks and 17.5 miles for vans and passenger automobiles, 10 percent of this total would represent an onsite travel distance for each truck of approximately 5.2 miles and an onsite travel distance for each van and passenger automobile of 1.75 miles. Thus, the 10 percent assumption is conservative and would tend to overstate the actual impact.

Table 2-9. Operational-Related Emissions Attributable to Project Buildout (Localized Significance Analysis)

Source: CalEEMod 2022.1. Refer to Attachment A for Model Data Outputs.

Notes: Emissions taken from the season, summer or winter, with the highest output.

As shown in Table 2-9, the Project would result in a net reduction of 1.82 pounds per day of NO_x and 14.01 pounds per day of CO and an increase of 2.51 pounds per day of PM₁₀ and 0.45 pounds per day of PM_{2.5}.

Project emissions of these pollutants during operations would not exceed the SCAQMD LST thresholds. Therefore, the Project would not result in significant concentrations of pollutants at nearby sensitive receptors.

2.3.3.3 Conflict with the South Coast Air Quality Management District Air Quality Management Plan

As part of its enforcement responsibilities, the USEPA requires each state with nonattainment areas to prepare and submit a SIP that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under state law, the CCAA requires an air quality attainment plan to be prepared for areas designated as nonattainment with regard to the NAAQS and CAAQS. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

As previously mentioned, the Project Site is located within the SoCAB, which is under the jurisdiction of the SCAQMD. The SCAQMD is required, pursuant to the federal CAA, to reduce emissions of criteria pollutants for which the SoCAB is in nonattainment. In order to reduce such emissions, the SCAQMD drafted and adopted the 2022 AQMP. The 2022 AQMP establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving state and federal air quality standards. The 2022 AQMP is a regional and multi-agency effort including the SCAQMD, CARB, SCAG, and the USEPA. The plan's pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's latest RTP/SCS, updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. (SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans.) The Project is subject to the SCAQMD's AQMP.

According to the SCAQMD, in order to determine consistency with SCAQMD's air quality planning two main criteria must be addressed.

Criterion 1:

With respect to the first criterion, SCAQMD methodologies require that an air quality analysis for a project include forecasts of project emissions in relation to contributing to air quality violations and delay of attainment.

- a) *Would the project result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new air quality violations?*

As shown in Tables 2-6, 2-7, 2-8, and 2-9 above, the Proposed Project would result in emissions that would be below the SCAQMD regional and localized thresholds during both construction and operations. Therefore, the Proposed Project would not result in an increase in the frequency or severity of existing air quality violations and would not have the potential to cause or affect a violation of the ambient air quality standards.

- b) *Would the project delay timely attainment of air quality standards or the interim emissions reductions specified in the AQMP?*

As shown in Table 2-6 and 2-8 above, the Proposed Project would be below the SCAQMD regional thresholds for construction and operations. Because the Project would result in less than significant regional emission impacts, it would not delay the timely attainment of air quality standards or AQMP emissions reductions.

Criterion 2:

With respect to the second criterion for determining consistency with SCAQMD and SCAG air quality policies, it is important to recognize that air quality planning within the SoCAB focuses on attainment of ambient air quality standards at the earliest feasible date. Projections for achieving air quality goals are based on assumptions regarding population, housing, and growth trends. Thus, the SCAQMD's second criterion for determining Project consistency focuses on whether or not the Proposed Project exceeds the assumptions utilized in preparing the forecasts presented in its air quality planning documents. Determining whether or not a project exceeds the assumptions reflected in the 2022 AQMP involves the evaluation of the three criteria outlined below. The following discussion provides an analysis of each of these criteria.

- a) *Would the project be consistent with the population, housing, and employment growth projections utilized in the preparation of the 2022 AQMP?*

As discussed above, the 2022 AQMP establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving state and federal air quality standards. The plan's pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's 2020-2045 RTP/SCS, updated emission inventory methodologies for various source categories, and SCAG's growth forecasts, which were defined in consultation with local governments and with reference to local general plans. The population, housing, and employment forecasts, which are adopted by SCAG's Regional Council, are based on the local plans and policies applicable to the Project Site, which are used by SCAG in all phases of implementation and review. A project is consistent with regional air quality planning efforts, in part, if it is consistent with the population, housing, and employment assumptions that were used in the development of the SCAQMD air quality plans. The City of Brea General Plan is referenced by SCAG in order to assist in forecasting future growth in the City.

As described in Section 1.2 above, the Project Site has two land use designations under the City of Brea General Plan. The northern 24.2-acre portion of the Project Site is designated as Light Industrial, which accommodates industrial uses that are low intensity and contained entirely within buildings. Allowable uses include research and development, light manufacturing and processing, offices, warehousing and storage, logistics facilities, high-technology production, and related uses. The Light Industrial designation allows for a maximum FAR of 0.75. The southern approximately 7.4-acre portion of the Project Site is designated as Mixed Use II, which is intended to provide opportunities for the coordinated development of urban villages that offer a diverse range of complementary land uses in close proximity to one another. The Mixed Use II designation includes parking facilities as a permitted land use and allows a maximum FAR of 2.00. The northern approximately 24.2-acre portion of the Project Site is zoned Light Industrial (M-1), and the

southern approximately 7.4-acre portion of the site is zone Mixed-Use II (MU-II). Per the City of Brea City Code, M-1 zoning permits an array of light industrial uses, including warehouse and storage, and MU-II zoning permits a mix of commercial, residential, and parking uses. Both M-1 and MU-II zones permit a maximum height of 60 feet. The Project would demolish the existing 637,503-square-foot office building and surface parking lot to construct a 181,500-square-foot parcel delivery facility, consisting of 163,350 square feet of warehouse and storage space and 18,150 square feet of ancillary office space, on a 31.6-acre site. The proposed facility would be a single-story building with a maximum height of 56 feet (including architectural projects) and FAR of approximately 0.14:1. Therefore, the Project is consistent with the General Plan land use designation.

In addition, as described in Section 3, Project Description, of this Draft EIR, the Project would create a maximum of 800 employment opportunities that are anticipated to be filled by the existing regional workforce. Furthermore, the overall number of employees would be less than that of the existing baseline condition. Therefore, the Project would not induce substantial unplanned growth in the City and would be consistent with the employment growth projections anticipated in the City's General Plan.

As discussed previously, the 2022 AQMP is based on SCAG's RTP/SCS, which incorporates data from General Plans, as well as local land use data, such as the General Plan. The Project would adhere to the land uses envisioned in the General Plan and is, thus, consistent with the types, intensity, and patterns of land use envisioned for the site vicinity in the RTP/SCS, as detailed in Table 3-6 below. The Project-related employment growth would also be well within the Citywide growth projections. Thus, the Project would be consistent with the growth projections in the 2022 AQMP.

b) Would the project implement all feasible air quality mitigation measures?

In order to further reduce emissions, the Project would be required to comply with emission reduction measures promulgated by the SCAQMD, such as SCAQMD Rules 201, 402, 403, and 1113. SCAQMD Rule 402 prohibits the discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. SCAQMD Rule 403 requires fugitive dust sources to implement Best Available Control Measures for all sources, and all forms of visible particulate matter are prohibited from crossing any property line. SCAQMD Rule 403 is intended to reduce PM₁₀ emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. SCAQMD Rule 1113 requires manufacturers, distributors, and end-users of architectural and industrial maintenance coatings to reduce ROG emissions from the use of these coatings, primarily by placing limits on the ROG content of various coating categories. Rule 201 requires a "Permit to Construct" prior to the installation of any equipment "the use of which may cause the issuance of air contaminants . . .". Rule 1401 requires new source review of any new, relocated, or modified permit units that emit TACs. As such, the Proposed Project meets this consistency criterion. As such, the

c) Would the project be consistent with the land use planning strategies set forth by SCAQMD air quality planning efforts?

Land use planning strategies to develop infill sites, reduce VMT and GHG emissions, and promote sustainable design in the 2022 AQMP are primarily based on the 2020-2045 RTP/SCS. As discussed in detail below in Section 3.3.3.2 and Table 3-6 the Project would be consistent with SCAG's 2020-2045 RTP/SCS. The Project would redevelop an underutilized infill site in an urbanized area of the City and would provide sustainability features such as energy efficient appliances and lighting, a solar-ready roof, EV charging stations, and EV capable stalls. The Project would also provide bike parking spaces and extend The Tracks at Brea by improving the bike and walkway path along the Nasa Street Project frontage to the intersection of Valencia Avenue and Nasa Street, which would promote alternative modes of travel. Additionally, the Project would establish a last-mile parcel delivery facility with nearby access to freeways, which would facilitate the efficient movement of goods by absorbing portions of the service areas that are currently covered by existing delivery stations and reducing the distance traveled by delivery vans throughout the region. The Project would also provide approximately 800 employment opportunities in a housing-rich area that could be filled by local residents, thereby reducing commuter trips. These Project characteristics would support the goals of the RTP/SCS to reduce VMT and associated GHG emissions. Therefore, the Project would be consistent with the land use planning strategies set forth by SCAQMP in its 2022 AQMP. As such, the Proposed Project meets this consistency criterion. The AQMP contains air pollutant reduction strategies based on SCAG's latest growth forecasts, and SCAG's growth forecasts were defined in consultation with local governments and with reference to local general plans. The Proposed Project is consistent with the land use designation and development density presented in the City's General Plan and therefore, would not exceed the population or job growth projections used by the SCAQMD to develop the AQMP.

In conclusion, the determination of AQMP consistency is primarily concerned with the long-term influence of a project on air quality. The Proposed Project would not result in a long-term impact on the region's ability to meet state and federal air quality standards. The Proposed Project's long-term influence would also be consistent with the goals and policies of the SCAQMD's 2022 AQMP.

The Project would be consistent with the emission-reduction goals of the 2022 AQMP.

2.3.3.4 Exposure of Sensitive Receptors to Toxic Air Contaminants

As previously described, sensitive receptors are defined as facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over age 65, children under age 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis. The nearest sensitive receptors to the Project Site are residences located across Valencia Avenue, approximately 37 meters distant at the nearest.

Construction-Generated Air Contaminants

Construction-related activities would result in temporary, short-term Proposed Project-generated emissions of diesel particulate matter (DPM), ROG, NO_x, CO, and PM₁₀ from the exhaust of off-road, heavy-duty diesel

equipment for site preparation (e.g., clearing, grading); soil hauling truck traffic; paving; and other miscellaneous activities. The portion of the SoCAB which encompasses the Project Area is designated as a nonattainment area for the federal O₃ and PM_{2.5} standards and is also a nonattainment area for the state standards for O₃, PM_{2.5} and PM₁₀.¹⁷ Thus, existing O₃, PM₁₀, and PM_{2.5} levels in the SoCAB are at unhealthy levels during certain periods. However, as shown in Table 2-6 and Table 2-7, the Project would not exceed the SCAQMD regional or localized significance thresholds for emissions.

The health effects associated with O₃ are generally associated with reduced lung function. O₃ is not emitted directly into the air but is formed through complex chemical reactions between precursor emissions of ROG and NO_x in the presence of sunlight. The reactivity of O₃ causes health problems because it damages lung tissue, reduces lung function and sensitizes the lungs to other irritants. Scientific evidence indicates that ambient levels of O₃ not only affect people with impaired respiratory systems, such as asthmatics, but healthy adults and children as well. Exposure to O₃ for several hours at relatively low concentrations has been found to significantly reduce lung function and induce respiratory inflammation in normal, healthy people during exercise. This decrease in lung function generally is accompanied by symptoms including chest pain, coughing, sneezing and pulmonary congestion.

Studies show associations between short-term O₃ exposure and non-accidental mortality, including deaths from respiratory issues. Studies also suggest long-term exposure to O₃ may increase the risk of respiratory-related deaths. The concentration of O₃ at which health effects are observed depends on an individual's sensitivity, level of exertion (i.e., breathing rate), and duration of exposure. Studies show large individual differences in the intensity of symptomatic responses, with one study finding no symptoms to the least responsive individual after a 2-hour exposure to 400 parts per billion of O₃ and a 50 percent decrement in forced airway volume in the most responsive individual. Although the results vary, evidence suggests that sensitive populations (e.g., asthmatics) may be affected on days when the 8-hour maximum O₃ concentration reaches 80 parts per billion. Because the Project would not involve construction activities that would result in O₃ precursor emissions (ROG or NO_x) in excess of the SCAQMD thresholds, which are set to be protective of human health and account for cumulative emissions in the SoCAB, the Project is not anticipated to substantially contribute to regional O₃ concentrations and the associated health impacts.

CO tends to be a localized impact associated with congested intersections. In terms of adverse health effects, CO competes with oxygen, often replacing it in the blood, reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can include dizziness, fatigue, and impairment of central nervous system functions. The Project would not involve construction activities that would result in CO emissions in excess of the SCAQMD thresholds, which are set to be protective of human health and account for cumulative emissions in the SoCAB. Thus, the Project's CO emissions would not contribute to the health effects associated with this pollutant.

Particulate matter (PM₁₀ and PM_{2.5}) contains microscopic solids or liquid droplets that are so small that they can get deep into the lungs and cause serious health problems. Particulate matter exposure has been linked to a variety of problems, including premature death in people with heart or lung disease, nonfatal heart

¹⁷ CARB. 2022. State and Federal Area Designation Maps. <http://www.arb.ca.gov/desig/adm/adm.htm>.

attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms such as irritation of the airways, coughing, or difficulty breathing. For construction activity, DPM is the primary TAC of concern. PM₁₀ exhaust is considered a surrogate for DPM as all diesel exhaust is considered to be DPM and it contains PM_{2.5} exhaust as a subset. As with O₃ and NO_x, the Project would not generate emissions of PM₁₀ or PM_{2.5} that would exceed the SCAQMD's thresholds. The increases of these pollutants generated by the Proposed Project would not on their own generate an increase in the number of days exceeding the NAAQS or CAAQS standards. Therefore, PM₁₀ and PM_{2.5} emissions, when combined with the existing PM emitted regionally, would have minimal health effect on people located in the immediate vicinity of the Project Site. Additionally, the Project's PM₁₀ and PM_{2.5} emissions are not expected to cause any increase in related regional health effects from these pollutants.

Furthermore, the Project has been evaluated against the SCAQMD's LSTs for construction. LSTs were developed in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative and can be used to assist lead agencies in analyzing localized impacts associated with Project-specific level of proposed projects. The SCAQMD Environmental Justice Enhancement Initiative program seeks to ensure that everyone has the right to equal protection from air pollution. The Environmental Justice Program is divided into three categories, with the LST protocol promulgated under Category I: *Further-Reduced Health Risk*. As shown in Table 2-7, the emissions of pollutants on the peak day of construction would not result in significant concentrations of pollutants at nearby sensitive receptors. Thus, the fact that onsite Project construction emissions would be generated at rates below the LSTs for NO_x, CO, PM₁₀, and PM_{2.5} demonstrates that the Project would not adversely impact nearby sensitive receptors.

In summary, Project construction would not result in a potentially significant contribution to regional concentrations of nonattainment pollutants and would not result in a significant contribution to the adverse health impacts associated with those pollutants.

Project Health Risk Assessment

A Health Risk Assessment (HRA) was performed for Project construction and Project operations to determine the health risk associated with each aspect of the Proposed Project. The HRA analyzed cancer and chronic non-cancer risk calculated for 70-year, 30-year, 25-year and 9-year operational exposure scenarios for operational emissions and utilized Project information for an approximately 2-year construction scenario. The operational scenario durations were chosen for this analysis per OEHHA guidance; the 25-year scenario was used to model the health risk for workers at business locations and the 70-, 30-, and 9-year scenarios were used for residents in residential areas. Construction risk was calculated using the duration provided by the Project Proponent and onsite emissions generated using CalEEMod.

For both operations and construction, emissions from the heavy-duty and medium heavy-duty trucks are calculated using PM₁₀ exhaust running and idle emission rates generated for Orange County for year 2025 by the EMFAC2021 online interface. All PM₁₀ exhaust emitted from truck exhaust is considered to be DPM. Distances of the truck roadway links associated with Project operations are used along with a representative speed profile to calculate peak hourly and annual DPM emissions from Project related trucks. Emissions for speed bins were gathered to be used to develop a conservative aggregate emission factor for Project related heavy duty and medium duty truck activity.

Construction Emission Calculations

Construction emissions sources include onsite haul trucks, offsite haul trucks, and onsite construction. All onsite and offsite diesel truck traffic related PM₁₀ exhaust emissions were generated using EMFAC2021. PM₁₀ exhaust is considered a surrogate for DPM as it contains PM_{2.5} exhaust as a subset and all diesel exhaust is considered to be DPM. Offsite and onsite truck trips were obtained from CalEEMod (see Attachment A). Offsite truck movement was modeled as line volume sources totaling 1.3 miles, exiting the Project Site and traversing south onto Surveyor Avenue, east onto Nasa Street, continuing onto Valencia Avenue with 50 percent of the trips traveling north to the Olinda Alpha Landfill and 50 percent of the trips traveling south on Valencia Avenue towards Imperial Highway and onto the Interstate 57 freeway. Onsite construction activities were modeled as an area source encompassing the existing building on the Project Site where the majority of demolition and building construction would occur. Due to the linear nature of construction paving activities, line volume sources were placed around the perimeter of the proposed parking lot areas totaling 96 volume sources. PM₁₀ exhaust emissions were obtained from CalEEMod and distributed based on the proposed construction activities (see Attachment B).

Operational Emission Calculations

Operational emissions sources include onsite and offsite trucks as well as idling emissions at the proposed loading dock. All onsite and offsite diesel truck traffic related PM₁₀ exhaust emissions were generated using EMFAC2021. PM₁₀ exhaust is considered a surrogate for DPM as it contains PM_{2.5} exhaust as a subset and all diesel exhaust is considered to be DPM. According to the Project proponent, truck traffic would exit the Project Site and travel south onto Surveyor Avenue, east onto Nasa Street, and south onto Valencia Avenue. 40 percent of the trucks from Valencia Avenue would travel east onto Imperial Highway, while 60 percent would travel west onto Imperial Highway.¹⁸ Offsite truck movement was modeled as line volume sources totaling 1.3 miles. The Project would result in the generation of 62 daily truck trips. Onsite truck movement was modeled as line volume sources traversing the proposed path of travel identified in the Traffic Impact Assessment.¹⁹ An area source was modeled within the location of the loading dock and used to account for onsite truck idling emissions.

Dispersion Modeling

The air dispersion modeling for the HRA was performed using the USEPA AERMOD Version v22112 dispersion model. AERMOD is a steady-state, multiple-source, Gaussian dispersion model designed for use with emission sources situated in terrain where ground elevations can exceed the stack heights of the emission sources. The USGS_NED_13_n34w118.tif file Digital Elevation Model File was used for elevation data for all sources and receptors in the Project domain. All regulatory defaults were used with urban settings for dispersion modeling as configured in AERMOD.

¹⁸ NV5. 2024. Vehicle Miles Traveled Analysis for Brea Delivery Station.

¹⁹ Ibid.

AERMOD requires hourly meteorological data consisting of wind vector, wind speed, temperature, stability class, and mixing height. Pre-processed meteorological data files provided by SCAQMD using USEPA's AERMET program, designed to create AERMOD input files, for the Fullerton Airport were selected as being the most representative meteorology based on proximity. The location of the meteorological monitoring site is shown in Attachment B of this document.

The unit emission rate of one gram per second was utilized in AERMOD to create plot files containing the dispersion factor (X/Q) for each source group. A uniform grid was placed, centered over the Project Area with a 50 by 50 grid spaced at 25 meters. The grid was placed evenly over the area surrounding the Project and includes 441 receptors. Additionally, discrete receptors were placed within the Brea Sports Park and Olinda Elementary School, located north of the Project Site, as they are located just outside the uniform grid. No onsite receptors were modeled for this analysis.

Risk during operations was also modeled utilizing worker factors and residential factors to find the Maximumly Exposed Individual Resident (MEIR), Maximumly Exposed Individual Worker (MEIW) and Point of Maximum Impact (PMI). The chronic and carcinogenic health risk calculations are based on the standardized equations contained in the California OEHHA Guidance Manual²⁰ as implemented in CARB's HARP2 program.²¹

Based on the OEHHA methodology, the residential inhalation cancer risk from the annual average TAC concentrations is calculated by multiplying the daily inhalation or oral dose, by a cancer potency factor, the age sensitivity factor (ASF), the frequency of time spent at home, and the exposure duration divided by averaging time, to yield the excess cancer risk. These factors are discussed in more detail below. Cancer risk must be separately calculated for specified age groups, because of age differences in sensitivity to carcinogens and age differences in intake rates (per kg body weight). Separate risk estimates for these age groups provide a health-protective estimate of cancer risk by accounting for greater susceptibility in early life, including both age-related sensitivity and amount of exposure.

Exposure through inhalation (Dose-air) is a function of the breathing rate, the exposure frequency, and the concentration of a substance in the air. For residential exposure, the breathing rates are determined for specific age groups, so Dose-air is calculated for each of these age groups, 3rd trimester, 0<2, 2<9, 2<16, 16<30 and 16-70 years. To estimate cancer risk, the dose was estimated by applying the following formula to each ground-level concentration:

$$\text{Dose-air} = (C_{\text{air}} * \{BR/BW\} * A * EF * 10^{-6})$$

Where:

Dose-air = dose through inhalation (mg/kg/day)

²⁰ OEHHA. 2015. Guidance Manual for Preparation of Health Risk Assessments.

²¹ CARB. 2022. HARP Air Dispersion Modeling and Risk Tool 22118.
<https://ww2.arb.ca.gov/resources/documents/harp-air-dispersion-modeling-and-risk-tool>

C_{air} = air concentration ($\mu\text{g}/\text{m}^3$) from air dispersion model

{BR/BW} = daily breathing rate normalized to body weight (L/kg body weight – day) (361 L/kg BW-day for 3rd Trimester, 1,090 L/kg BW-day for 0<2 years, 861 L/kg BW-day for 2<9 years, 745 L/kg BW-day for 2<16 years, 335 L/kg BW-day for 16<30 years, and 290 L/kg BW-day 16<70 years)

A = Inhalation absorption factor (unitless [1])

EF = exposure frequency (unitless), days/365 days (0.96 [approximately 350 days per year])

10^{-6} = conversion factor (micrograms to milligrams, liters to cubic meters)

OEHHA developed ASFs to take into account the increased sensitivity to carcinogens during early-in-life exposure. In the absence of chemical-specific data, OEHHA recommends a default ASF of 10 for the third trimester to age 2 years, an ASF of 3 for ages 2 through 15 years to account for potential increased sensitivity to carcinogens during childhood and an ASF of 1 for ages 16 through 70 years.

Fraction of time at home (FAH) during the day is used to adjust exposure duration and cancer risk from a specific facility’s emissions, based on the assumption that exposure to the facility’s emissions are not occurring away from home. OEHHA recommends the following FAH values: from the third trimester to age <2 years, 85 percent of time is spent at home; from age 2 through <16 years, 72 percent of time is spent at home; from age 16 years and greater, 73 percent of time is spent at home.

To estimate the cancer risk, the dose is multiplied by the cancer potency factor, the ASF, the exposure duration divided by averaging time, and the frequency of time spent at home (for residents only):

$$\text{Risk}_{\text{inh-res}} = (\text{Dose}_{\text{air}} * \text{CPF} * \text{ASF} * \text{ED}/\text{AT} * \text{FAH})$$

Where:

$\text{Risk}_{\text{inh-res}}$ = residential inhalation cancer risk (potential chances per million)

Dose_{air} = daily dose through inhalation (mg/kg-day)

CPF = inhalation cancer potency factor (mg/kg-day⁻¹)

ASF = age sensitivity factor for a specified age group (unitless)

ED = exposure duration (in years) for a specified age group (0.25 years for 3rd trimester, 2 years for 0<2, 7 years for 2<9, 14 years for 2<16, 14 years for 16<30, 54 years for 16-70)

AT = averaging time of lifetime cancer risk (years)

FAH = fraction of time spent at home (unitless)

Non-cancer chronic impacts are calculated by dividing the annual average concentration by the Reference Exposure Level (REL) for that substance. The REL is defined as the concentration at which no adverse non-cancer health effects are anticipated. The following equation was used to determine the non-cancer risk:

$$\text{Hazard Quotient} = \text{Ci}/\text{RELi}$$

Where:

- Ci = Concentration in the air of substance i (annual average concentration in $\mu\text{g}/\text{m}^3$)
- RELi = Chronic noncancer Reference Exposure Level for substance i ($\mu\text{g}/\text{m}^3$)

Cancer Risk

Construction cancer risk calculations for existing residential and worker receptors are based on a 2-year construction scenario. Operational cancer risk calculations for existing residential receptors are based on 70-, 30-, and 9-year exposure periods and worker receptors are based on a 25-year exposure period for operations. Additionally, the 2-year exposure period of construction and 9-year exposure period for operations was used for the Brea Sports Park as well as Olinda Elementary School located in the vicinity of the Project Site. The calculated cancer risk accounts for 350 days per year of exposure to residential receptors. While the average American spends 87 percent of their life indoors,²² neither the pollutant dispersion modeling nor the health risk calculations account for the reduced exposure structures provide. Instead, health risk calculations account for the equivalent exposure of continual outdoor living. The calculated carcinogenic risk at Project vicinity receptors is depicted in Table 2-10.

²² USEPA. 2021. National Human Activity Pattern Survey.

Table 2-10. Maximum Construction and Operational Cancer Risk Summary	
Maximum Exposure Scenario	Total Maximum Risk
Project Construction	
2-Year Construction Exposure Resident	4.61
2-Year Construction Exposure Worker	0.14
2-Year Construction Exposure Brea Sports Park	2.43
2-Year Construction Exposure Olinda Elementary School	1.02
<i>Significance Threshold</i>	<i>10</i>
Exceed Threshold?	No
Project Operations	
70-Year Exposure Resident	1.02
30-Year Exposure Resident	0.90
9-Year Exposure Resident	0.64
25-Year Exposure Worker	1.29
9-Year Exposure Brea Sports Park	0.58
9-Year Exposure Olinda Elementary School	0.24
<i>Significance Threshold</i>	<i>10</i>
Exceed Threshold?	No

Source: ECORP Consulting 2024. See Attachment B.

As shown, impacts related to cancer risk for all modeled scenarios would be below the 10 in one million threshold. These calculations do not account for any pollutant-reducing remedial components inherent to the Project or the Project Site.

The MEIR for construction emissions is a single-family residence located east of the Project Site fronting Granada Circle. The MEIW for construction emissions is the building located west of the Project Site. The PMI for construction emissions is located west of the Project Site on Surveyor Avenue. The MEIR for operational emissions is the same as that for construction. The MEIW for operational emissions is located west of the Project Site across Surveyor Avenue. The PMI for operational emissions is located on Surveyor Avenue adjacent to the Project Site. All of the above listed points are presented in Attachment B of this document.

Non-Carcinogenic Hazards

In addition to cancer risk, the significance thresholds for TAC exposure requires an evaluation of non-cancer risk stated in terms of a hazard index. Non-cancer chronic impacts are calculated by dividing the annual average concentration by the REL for that substance. The REL is defined as the concentration at which no adverse non-cancer health effects are anticipated. The potential for acute non-cancer hazards is evaluated by comparing the maximum short-term exposure level to an acute REL. RELs are designed to protect sensitive individuals within the population. The calculation of acute non-cancer impacts is similar to the procedure for chronic non-cancer impacts.

An acute or chronic hazard index of 1.0 is considered individually significant. The hazard index is calculated by dividing the acute or chronic exposure by the REL. No acute health risk guidelines have been established for DPM. Thus, no acute hazards were analyzed for this analysis, and maximum chronic hazard indexes for residents and workers due to Project operations are presented in Table 2-11.

Table 2-11. Maximum Non-Carcinogenic Health Risk Summary	
Maximum Exposure Scenario	Chronic Health Hazard Index
Project Construction	
Resident	0.0027
Worker	0.0056
<i>Significance Threshold</i>	<i>1</i>
Exceed Threshold?	No
Project Operations	
Resident (70 Year for Chronic)	0.0020
Worker (25 Year for Chronic)	0.0042
<i>Significance Threshold</i>	<i>1</i>
Exceed Threshold?	No

Source: ECORP Consulting 2024. See Attachment B.

As shown in Table 2-11, impacts related to non-cancer risk as a result of the Project Site would not surpass significance thresholds.

Carbon Monoxide Hot Spots

It has long been recognized that CO exceedances are caused by vehicular emissions, primarily when idling at intersections. Concentrations of CO are a direct function of the number of vehicles, length of delay, and traffic flow conditions. Under certain meteorological conditions, CO concentrations close to congested intersections that experience high levels of traffic and elevated background concentrations may reach

unhealthy levels, affecting nearby sensitive receptors. Given the high traffic volume potential, areas of high CO concentrations, or “hot spots,” are typically associated with intersections that are projected to operate at unacceptable levels of service during the peak commute hours. It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. However, transport of this criteria pollutant is extremely limited, and CO disperses rapidly with distance from the source under normal meteorological conditions. Furthermore, vehicle emissions standards have become increasingly more stringent in the last 20 years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SoCAB is designated as in attainment. Detailed modeling of Project-specific CO “hot spots” is not necessary and thus this potential impact is addressed qualitatively.

A CO “hot spot” would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur. The analysis prepared for CO attainment in the SCAQMD’s 1992 Federal Attainment Plan for Carbon Monoxide in Los Angeles County and a Modeling and Attainment Demonstration prepared by the SCAQMD as part of the 2003 AQMP can be used to demonstrate the potential for CO exceedances of these standards. The SCAQMD is the air pollution control officer for much of southern California. The SCAQMD conducted a CO hot spot analysis as part of the 1992 CO Federal Attainment Plan at four busy intersections in Los Angeles County during the peak morning and afternoon time periods. The intersections evaluated included Long Beach Boulevard and Imperial Highway (Lynwood), Wilshire Boulevard and Veteran Avenue (Westwood), Sunset Boulevard and Highland Avenue (Hollywood), and La Cienega Boulevard and Century Boulevard (Inglewood). The busiest intersection evaluated was at Wilshire Boulevard and Veteran Avenue, which has a traffic volume of approximately 100,000 vehicles per day. Despite this level of traffic, the CO analysis concluded that there was no violation of CO standards.²³ In order to establish a more accurate record of baseline CO concentrations affecting Los Angeles, a CO “hot spot” analysis was conducted in 2003 at the same four busy intersections in Los Angeles at the peak morning and afternoon time periods. This “hot spot” analysis did not predict any violation of CO standards. The highest one-hour concentration was measured at 4.6 ppm at Wilshire Boulevard and Veteran Avenue and the highest eight-hour concentration was measured at 8.4 ppm at Long Beach Boulevard and Imperial Highway. Thus, there was no violation of CO standards.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD), the air pollution control officer for the San Francisco Bay Area, concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—in order to generate a significant CO impact.

²³ SCAQMD. 1992. 992 Federal Attainment Plan for Carbon Monoxide.

The Proposed Project is anticipated to result in 2,098 daily trips per the Project VMY Report.²⁴ More specifically, the Project's daily vehicle generation would consist of a maximum of 62 daily heavy-duty truck trips a day, 1,346 passenger car trips a day, and 690 van trips a day. Thus, the Proposed Project would not generate traffic volumes at any intersection of more than 100,000 vehicles per day (or 44,000 vehicles per hour) and there is no likelihood of the Project traffic exceeding CO values.

2.3.3.5 Odors

Typically, odors are regarded as an annoyance rather than a health hazard. However, manifestations of a person's reaction to foul odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache).

With respect to odors, the human nose is the sole sensing device. The ability to detect odors varies considerably among the population and overall is quite subjective. Some individuals have the ability to smell minute quantities of specific substances; others may not have the same sensitivity but may have sensitivities to odors of other substances. In addition, people may have different reactions to the same odor; in fact, an odor that is offensive to one person (e.g., from a fast-food restaurant) may be perfectly acceptable to another. It is also important to note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience. For instance, if a person describes an odor as flowery or sweet, then the person is describing the quality of the odor. Intensity refers to the strength of the odor. For example, a person may use the word "strong" to describe the intensity of an odor. Odor intensity depends on the odorant concentration in the air. When an odorous sample is progressively diluted, the odorant concentration decreases. As this occurs, the odor intensity weakens and eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant reaches a detection threshold. An odorant concentration below the detection threshold means that the concentration in the air is not detectable by the average human.

During construction, the Proposed Project presents the potential for generation of objectionable odors in the form of diesel exhaust in the immediate vicinity of the site. However, these emissions are short-term in nature and will rapidly dissipate and be diluted by the atmosphere downwind of the emission sources. Additionally, odors would be localized and generally confined to the construction area. Therefore, construction odors would not adversely affect a substantial number of people to odor emissions.

According to the SCAQMD, land uses commonly considered to be potential sources of obnoxious odorous emissions include agriculture (farming and livestock), wastewater treatment plants, food processing plants,

²⁴ NV5. 2024. Vehicle Miles Traveled Analysis for Brea Delivery Station.

chemical plants, composting facilities, refineries, landfills, dairies, and fiberglass molding. The Project does not contain any of the land uses identified as typically associated with emissions of objectionable odors.

2.3.3.6 Cumulative Impacts

The cumulative context for air quality is regional. For the Orange County portion of the SCAB, the region is designated as a nonattainment area for the federal standards for O₃ and PM_{2.5} and a nonattainment area for the state standards for O₃, PM_{2.5} and PM₁₀. The SCAB is designated unclassifiable or in attainment for all other federal and state standards. Cumulative growth in population, vehicle use, and industrial activity could inhibit efforts to improve regional air quality and attain the ambient air quality standards. Thus, the setting for this cumulative analysis consists of the SoCAB and associated growth and development anticipated in the air basin.

The SCAQMD's approach to assessing cumulative impacts is based on the AQMP forecasts of attainment of ambient air quality standards in accordance with the requirements of the CAA and CCAAs. As discussed earlier, the Proposed Project would not conflict with the 2022 AQMP, which aims to bring the SoCAB into attainment for all criteria pollutants, as it supports the goals of the RTP/SCS to reduce VMT and associated GHG emissions. In addition, the SCAQMD recommends that any given project's potential contribution to cumulative impacts be assessed using the same significance criteria as for project-specific impacts. Therefore, individual projects that do not generate operational or construction emissions that exceed the SCAQMD's daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which the air basin is in nonattainment and therefore would not be considered to have a significant, adverse air quality impact. Alternatively, individual Project-related construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable. As previously noted, the Project would not exceed the applicable SCAQMD thresholds for construction or operations. Thus, the Project is considered less than cumulatively considerable in terms of air quality-related impacts.

3.0 GREENHOUSE GAS EMISSIONS

3.1 Greenhouse Gas Setting

Certain gases in the earth's atmosphere, classified as GHGs, play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space. A portion of the radiation is absorbed by the earth's surface and a smaller portion of this radiation is reflected back toward space. This absorbed radiation is then emitted from the earth as low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. Because the earth has a much lower temperature than the sun, it emits lower-frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead trapped, resulting in a warming of the atmosphere. This phenomenon, known as the greenhouse effect, is responsible for maintaining a habitable climate on earth. Without the greenhouse effect, the earth would not be able to support life as we know it.

Prominent GHGs contributing to the greenhouse effect are CO₂, methane (CH₄), and N₂O. Fluorinated gases also make up a small fraction of the GHGs that contribute to climate change. Fluorinated gases include chlorofluorocarbons, hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and nitrogen trifluoride; however, it is noted that these gases are not associated with typical land use development. Human-caused emissions of these GHGs in excess of natural ambient concentrations are believed to be responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the earth's climate, known as global climate change or global warming. More specifically, experts agree that human activities, principally through emissions of greenhouse gases, have unequivocally caused global warming, with global surface temperature reaching 1.1°C above 1850–1900 in 2011–2020.²⁵

Table 3-1 describes the primary GHGs attributed to global climate change, including their physical properties, primary sources, and contributions to the greenhouse effect.

Each GHG differs in its ability to absorb heat in the atmosphere based on the lifetime, or persistence, of the gas molecule in the atmosphere. CH₄ traps over 25 times more heat per molecule than CO₂, and N₂O absorbs 298 times more heat per molecule than CO₂. Often, estimates of GHG emissions are presented in carbon dioxide equivalents (CO₂e), which weigh each gas by its global warming potential. Expressing GHG emissions in CO₂e takes the contribution of all GHG emissions to the greenhouse effect and converts them to a single unit equivalent to the effect that would occur if only CO₂ were being emitted.

Climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and TACs, which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one to several thousand years). GHGs persist in the atmosphere for long enough time periods to be dispersed around the globe. Although the exact lifetime of any particular GHG molecule is dependent on multiple variables and cannot be pinpointed, it is understood that more CO₂ is emitted into the atmosphere than is sequestered

²⁵ IPCC. 2014. Climate Change 2014 Synthesis Report: Approved Summary for Policymakers. <http://www.ipcc.ch/>.

by ocean uptake, vegetation, or other forms. Despite the sequestration of CO₂, human-caused climate change is already causing damaging effects, including weather and climate extremes in every region across the globe.²⁶

Greenhouse Gas	Description
CO ₂	Carbon dioxide is a colorless, odorless gas. CO ₂ is emitted in a number of ways, both naturally and through human activities. The largest source of CO ₂ emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, industrial facilities, and other sources. A number of specialized industrial production processes and product uses such as mineral production, metal production, and the use of petroleum-based products can also lead to CO ₂ emissions. The atmospheric lifetime of CO ₂ is variable because it is so readily exchanged in the atmosphere. ¹
CH ₄	Methane is a colorless, odorless gas and is the major component of natural gas, about 87 percent by volume. It is also formed and released to the atmosphere by biological processes occurring in anaerobic environments. Methane is emitted from a variety of both human-related and natural sources. Human-related sources include fossil fuel production, animal husbandry (intestinal fermentation in livestock and manure management), rice cultivation, biomass burning, and waste management. These activities release significant quantities of CH ₄ to the atmosphere. Natural sources of CH ₄ include wetlands, gas hydrates, permafrost, termites, oceans, freshwater bodies, non-wetland soils, and other sources such as wildfires. The atmospheric lifetime of CH ₄ is about 12 years. ²
N ₂ O	Nitrous oxide is a clear, colorless gas with a slightly sweet odor. Nitrous oxide is produced by both natural and human-related sources. Primary human-related sources of N ₂ O are agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuels, adipic acid production, and nitric acid production. N ₂ O is also produced naturally from a wide variety of biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of N ₂ O is approximately 120 years. ³

The quantity of GHGs that it takes to ultimately result in climate change is not precisely known; it is sufficient to say the quantity is enormous, and no single project alone would measurably contribute to a noticeable incremental change in the global average temperature or to global, local, or microclimates. From the standpoint of CEQA, GHG impacts on global climate change are inherently cumulative.

3.1.1 Sources of Greenhouse Gas Emissions

In 2023, CARB released the 2023 edition of the California GHG inventory covering calendar year 2021 emissions. In 2021, California emitted 381.3 million gross metric tons of CO₂e including emissions from imported electricity.²⁷ This inventory is 3.4 percent higher than the State's 2020 inventory, but 5.7 percent lower than 2019 level, which aligns with the global changes, shutdowns, and economic recoveries affected by the COVID-19 pandemic. Additionally, between 2020 and 2021, California's Gross Domestic Product (GDP) increased 7.8 percent while the GHG intensity of California's economy (GHG emissions per unit GDP) decreased 4.1 percent. Combustion of fossil fuel in the transportation sector was the single largest source of California's GHG emissions in 2021, accounting for approximately 38.2 percent of total GHG emissions in the state. Transportation emissions have increased 7.4 percent compared to 2020, which is most likely from light duty vehicle emissions that rebounded when COVID-19 shelter-in-place orders were lifted. Emissions from the electricity sector account for 16.4 percent of the inventory, which is an increase of 4.8 percent since 2020, despite the growth of in-state solar and imported renewable energy. California's industrial sector accounts for the second largest source of the state's GHG emissions in 2021, accounting for 19.4 percent, which saw an increase of nearly 1 percent since 2020.²⁸

3.1.2 Existing GHG Setting

California has been a leader in addressing GHG emissions, with significant efforts to reduce emissions across various sectors. As of the most recent data, the state's total GHG emissions are approximately 369.1 million metric tons of CO₂e. This reflects a steady decline from the peak emissions of 489.7 metrics tons of CO₂e in 2004, driven by statewide initiatives.²⁹ The primary sources of GHG emissions in California include transportation, industrial activities, and electricity generation, with transportation alone accounting for nearly 40 percent of the state's total emissions.³⁰ In line with California's broader goals, the City of Brea has strived to reduce GHG emissions. Brea's emissions profile is influenced by its mix of residential, commercial, and industrial activities, with transportation and energy use being the primary contributors.

The Project Site is currently occupied by a 637,503 square foot office building with 1,949 parking spaces and accommodates 4,818 daily vehicle trips a day.³¹ Operations of the existing office building generates GHG emissions from natural gas used for energy and heating; electricity usage; vehicle trips for employees, vendors, and visitors; area sources such as landscaping equipment and consumer cleaning products;

3.2 Regulatory Framework

3.2.1 Federal

3.2.1.1 United States Environmental Protection Agency's GHG Funding of 2009

Based on scientific evidence, the United States Environmental Protection Agency (USEPA) announced its findings on GHG emissions on December 7, 2009 stating that GHG emissions threaten the public health and welfare of the American people, that GHG emissions from on-road vehicles contribute to that threat, and that GHG emissions are the primary driver of climate change, which can lead to hotter, longer heat waves that threaten the health of the sick, poor or elderly; increases ground-level ozone pollution linked to asthma and other respiratory illnesses; as well as other threats to the health and welfare of Americans.³³ The findings

³² Ibid.

³³ USEPA. 2009, EPA: Greenhouse Gases Threaten Public Health and Environment. https://www.epa.gov/archive/epapages/newsroom_archive/newsreleases/08d11a451131bca585257685005bf252.html.

were in response to the U.S. Supreme Court's 2007 decision that GHGs fit within the Clean Air Act definition of air pollutants.³⁴

Based on these findings, the USEPA signed two distinct findings regarding GHGs under section 202(a) of the Clean Air Act:

- **Endangerment Finding:** The Administrator finds that the current and projected concentrations of the six key well-mixed greenhouse gases, including carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆) in the atmosphere threaten the public health and welfare of current and future generations.
- **Cause or Contribute Finding:** The Administrator finds that the combined emissions of these well-mixed greenhouse gases from new motor vehicles and new motor vehicle engines contribute to the greenhouse gas pollution that threatens public health and welfare.

These findings do not themselves impose any requirements on industries or other entities. However, this action was a prerequisite for implementing GHG standards for vehicles and other sectors and forms the basis for the USEPA's regulatory actions.³⁵

3.2.1.2 United States Environmental Protection Agency's Clean Trucks Plan

In 2021, USEPA announced the Clean Trucks Plan to reduce GHG emissions and other harmful pollutants from heavy-duty trucks through a series of rulemaking over the following three years.³⁶

The first rulemaking of this Clean Trucks Plan is a final rule signed on December 20, 2022, which focuses on reducing emissions that form smog and soot and will apply to heavy-duty engines and vehicles beginning in model year 2027. The final rule is expected to reduce NO_x emissions from in-use fleets of heavy-duty trucks by almost 50 percent by 2045 and would result in widespread air quality improvements across the nation, especially in areas already overburdened by air pollution and diesel emissions. The final rule is consistent with President Biden's Executive Order 14037, Strengthening American Leadership in Clean Cars and Trucks (August 5, 2021) and includes amendments to regulations that implement air pollutant emission standards for other sectors (e.g., light-duty vehicles, marine diesel engines, locomotives, various types of nonroad engines, vehicles, and equipment).³⁷

³⁴ Ibid.

³⁵ USEPA, 2023. Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act. <https://www.epa.gov/climate-change/endangerment-and-cause-or-contribute-findings-greenhouse-gases-under-section-202a>.

³⁶ USEPA. 2024. Clean Trucks Plan. <https://www.epa.gov/regulations-emissions-vehicles-and-engines/clean-trucks-plan#:~:text=The%20first%20rulemaking%20of%20this,beginning%20in%20model%20year%202027>.

³⁷ USEPA. 2024. Final Rule and Related Materials for Control of Air Pollution from New Motor Vehicles: Heavy-Duty Engine and Vehicle Standards. <https://www.epa.gov/regulations-emissions-vehicles-and-engines/final-rule-and-related-materials-control-air-pollution>.

The second rulemaking is a final rule announced on March 20, 2024, which focuses on light- and medium-duty vehicles and addresses multi-pollutant emissions, including GHG emissions and emissions that form smog and soot, for model year 2027 and later commercial pickup trucks and vans. The final rule builds upon EPA's final standards for federal GHG emissions standards for passenger cars and light trucks for model years 2023 through 2026 and leverages advances in clean car technology to unlock benefits to Americans ranging from improving public health through reducing smog- and soot-forming pollution from vehicles, to reducing climate pollution, to saving drivers money through reduced fuel and maintenance costs. These standards will phase in over model years 2027 through 2032.³⁸

The third and final rulemaking of the Clean Trucks Plan was announced on March 29, 2024, and focuses on GHG emissions for model year 2027 and later heavy-duty vehicles. The new standards will be applicable to heavy-duty vocational vehicles (such as delivery trucks, refuse haulers, public utility trucks, transit, shuttle, school buses, etc.) and tractors (such as day cabs and sleeper cabs on tractor-trailer trucks).³⁹

3.2.1.3 National Highway Traffic and Safety Administration (NHTSA)

The NHTSA sets and enforces the Corporate Average Fuel Economy (CAFE) Standards, which were first enacted by Congress in 1975. The purpose of CAFE is to reduce energy consumption by increasing fuel economy in passenger cars and light trucks. CAFE Standards set fleet-wide targets that auto manufacturers must achieve each year. Increased CAFE Standards reduce GHG emissions, reduce consumer fuel consumption and costs, and increase the nation's independence from foreign oil.

Most recently, on June 7, 2024, NHTSA announced the final Model Years 2027-2031 CAFE Standards and Model Years 2030-2035 Heavy-Duty Pickup Trucks and Vans (HDPUV) Fuel Efficiency Standards. The final rule establishes standards that would require an industry-wide fleet average of approximately 50.4 miles per gallon (mpg) in Model Year 2031 for passenger cars and light trucks, and an industry fleet-wide average for HDPUVs of roughly 2.851 gallons per 100 miles in Model Year 2035. The final CAFE standards increase at a rate of 2 percent per year for passenger cars in Model Years 2027-2031 and 2 percent per year for light trucks in Model Years 2029-2031. The final HDPUV fuel efficiency standards increase at a rate of 10 percent per year in MYs 2030-2032 and 8 percent per year in Model Years 2033-2035. NHTSA projects the final standards will save consumers nearly \$23 billion in fuel costs and avoid the consumption of about 70 billion gallons of gasoline (equivalent) through 2050. The agency also projects the standards will prevent more than 710 million metric tons of carbon dioxide emissions by 2050, reduce air pollution, and reduce the country's dependence on oil. The final standards provide critical savings at the gas pump for American

³⁸ USEPA. 2024. Final Rule: Multi-Pollutant Emissions Standards for Model Years 2027 and Later Light-Duty and Medium-Duty Vehicles. <https://www.epa.gov/regulations-emissions-vehicles-and-engines/final-rule-multi-pollutant-emissions-standards-model>.

³⁹ USEPA. 2024. Final Rule: Greenhouse Gas Emissions Standards for Heavy-Duty Vehicles – Phase 3. <https://www.epa.gov/regulations-emissions-vehicles-and-engines/final-rule-greenhouse-gas-emissions-standards-heavy-duty>.

consumers and set goals that are consistent with Congress' direction to conserve energy and provide flexibility to industry on how best to meet those goals from proven, available fuel-saving technologies.⁴⁰

3.2.1.4 Energy Independence and Security Act

The Energy Independence and Security Act of 2007 (EISA) facilitates the reduction of national GHG emissions by requiring the following:

- Increasing the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard (RFS) that requires fuel producers to use at least 36 billion gallons of biofuel in 2022;
- Prescribing or revising standards affecting regional efficiency for heating and cooling products, procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances;
- Requiring approximately 25 percent greater efficiency for light bulbs by phasing out incandescent light bulbs between 2012 and 2014; requiring approximately 200 percent greater efficiency for light bulbs, or similar energy savings, by 2020; and
- While superseded by the USEPA and NHTSA actions described above, (i) establishing miles per gallon targets for cars and light trucks and (ii) directing the NHTSA to establish a fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for trucks.

Additional provisions of EISA address energy savings in government and public institutions, promote research for alternative energy, additional research in carbon capture, international energy programs, and the creation of "green jobs."

3.2.2 State

3.2.2.1 Executive Order S-3-05

Executive Order (EO) S-3-05, signed by Governor Arnold Schwarzenegger in 2005, proclaims that California is vulnerable to the impacts of climate change. It declares that increased temperatures could reduce the Sierra Nevada snowpack, further exacerbate California's air quality problems, and potentially cause a rise in sea levels. To combat those concerns, the EO established total GHG emission targets for the state. Specifically, emissions are to be reduced to the 2000 level by 2010, the 1990 level by 2020, and to 80 percent below the 1990 level by 2050.

⁴⁰ United States Department of Transportation. 2024. Corporate Average Fuel Economy. <https://www.nhtsa.gov/laws-regulations/corporate-average-fuel-economy>.

3.2.2.2 California Air Resources Board

The CARB, a part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both federal and State air pollution control programs within California. In this capacity, CARB conducts research, sets the California Ambient Air Quality Standards, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB has primary responsibility for the development of California's State Implementation Plan (SIP), for which it works closely with the Federal Government and the local air districts. The SIP is required for the State to take over implementation of the Federal Clean Air Act. CARB also has primary responsibility for adopting regulations to meet the State's goal of reducing GHG emissions. The State has met its goals to reduce GHG emissions to 1990 levels by 2020. Subsequent State goals include reducing GHG emissions to 40 percent below 1990 levels by 2030 and to 80 percent below 1990 levels by 2050.

3.2.2.3 Assembly Bill 1493

Assembly Bill (AB) 1493, also known as the Pavley Bill, required that CARB develop and adopt by January 1, 2005, regulations that achieve "the maximum feasible and cost-effective reduction of GHG emissions from motor vehicles." On June 30, 2009, the USEPA granted the waiver of CAA preemption to California for its GHG emissions standards for motor vehicles beginning with the 2009 model year. Pavley I regulates model years from 2009 to 2016 and Pavley II, which is now referred to as "LEV (Low Emission Vehicle) III GHG," regulates model years from 2017 to 2025. The Advanced Clean Cars program coordinates the goals of the LEV, Zero Emissions Vehicles (ZEV), and Clean Fuels Outlet programs, and should provide major reductions in GHG emissions. By 2025, when the rules will be fully implemented, new automobiles will emit 34 percent fewer GHGs and 75 percent fewer smog-forming emissions from their model year 2016 levels.

3.2.2.4 California Global Warming Solutions Act (Assembly Bill 32 and Senate Bill 32) and AB 197

In 2006, the California legislature passed Assembly Bill (AB) 32 (Health and Safety Code § 38500 et seq., or AB 32), also known as the Global Warming Solutions Act. AB 32 required CARB to design and implement feasible and cost-effective emission limits, regulations, and other measures, such that statewide GHG emissions are reduced to 1990 levels by 2020 (representing a 25 percent reduction in emissions). Pursuant to AB 32, CARB adopted a Scoping Plan in December 2008, which outlined measures to meet the 2020 GHG reduction goals. California exceeded the target of reducing GHG emissions to 1990 levels by the year 2017. The Scoping Plan is required by AB 32 to be updated at least every five years

In May 2014, CARB approved the first update to the AB 32 Scoping Plan. The 2013 Scoping Plan Update defined CARB's climate change priorities for the next five years and set the groundwork to reach post-2020 Statewide goals. The update highlighted California's progress toward meeting the "near-term" 2020 GHG emission reduction goals defined in the original Scoping Plan. It also evaluated how to align the State's

longer-term GHG emissions reduction strategies with other State policy priorities, including those for water, waste, natural resources, clean energy, transportation, and land use. In conjunction with the First Update, CARB identified “six key focus areas comprising major components of the State’s economy to evaluate and describe the larger transformative actions that will be needed to meet the State’s more expansive emission reduction needs by 2050.” Those six areas were: (1) energy; (2) transportation (vehicles/ equipment, sustainable communities, housing, fuels, and infrastructure); (3) agriculture; (4) water; (5) waste management; and (6) natural and working lands. The First Update identified key recommended actions for each sector that would facilitate achievement of the 2050 reduction target.

Senate Bill (SB) 32, signed into law on September 8, 2016, extended AB 32 by requiring the State to further reduce GHGs to 40 percent below 1990 levels by 2030 (the other provisions of AB 32 remained unchanged). On December 14, 2017, CARB adopted the 2017 Scoping Plan, which provided a framework for achieving the 2030 target. The 2017 Scoping Plan relies on the continuation and expansion of existing policies and regulations, such as the Cap-and-Trade Program, as well as implementation of recently adopted policies and policies, such as SB 350 and SB 1383. The 2017 Scoping Plan also put an increased emphasis on innovation, adoption of existing technology, and strategic investment to support its strategies. As with the 2013 Scoping Plan Update, the 2017 Scoping Plan does not provide project-level thresholds for land use development. Instead, it recommends that local governments adopt policies and locally appropriate quantitative thresholds consistent with Statewide per capita goals of no more than 6 MTCO_{2e} by 2030 and 2 MTCO_{2e} by 2050.

AB 197, signed September 8, 2016, is a bill linked to SB 32 and signed on September 8, 2016, prioritizes efforts to cut GHG emissions in low-income or minority communities. AB 197 requires CARB to make available, and update at least annually, on its website the emissions of GHGs, criteria pollutants, and toxic air contaminants for each facility that reports to CARB and air districts. In addition, AB 197 adds two Members of the Legislature to the CARB board as ex officio, non-voting members and creates the Joint Legislative Committee on Climate Change Policies to ascertain facts and make recommendations to the Legislature and the houses of the Legislature concerning the State’s programs, policies, and investments related to climate change.

In December 2017, CARB adopted the 2017 Update. The 2017 Update builds upon the framework established by the 2008 Climate Change Scoping Plan and the First Update while identifying new, technologically feasible, and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health. The 2017 Update includes policies to require direct GHG reductions at some of the State’s largest stationary sources and mobile sources. These policies include the use of lower GHG fuels, efficiency regulations, and the Cap-and-Trade Program, which constrains and reduces emissions at covered sources.

In response to the passage of AB 1279 and the identification of the 2045 GHG emissions reduction target, CARB published the Final 2022 Climate Change Scoping Plan in November 2022 (2022 Update). The 2022 Update builds upon the framework established by the 2008 Climate Change Scoping Plan and previous updates while identifying a new, technologically feasible, cost-effective, and equity-focused path to achieve

California's climate target. The 2022 Update includes policies to achieve a significant reduction in fossil fuel combustion, further reductions in short-lived climate pollutants, support for sustainable development, increased action on natural and working lands to reduce emissions and sequester carbon, and the capture and storage of carbon.

The 2022 Update assesses the progress California is making toward reducing its GHG emissions by at least 40 percent below 1990 levels by 2030, as called for in SB 32 and laid out in the 2017 Scoping Plan; addresses recent legislation and direction from Governor Newsom; extends and expands upon these earlier plans; and implements a target of reducing anthropogenic emissions to 85 percent below 1990 levels by 2045, as well as taking an additional step of adding carbon neutrality as a science-based guide for California's climate work. As stated in the 2022 Update, "the plan outlines how carbon neutrality can be achieved by taking bold steps to reduce GHGs to meet the anthropogenic emissions target and by expanding actions to capture and store carbon through the State's natural and working lands and using a variety of mechanical approaches." Specifically, the 2022 Update achieves the following:

- Identifies a path to keep California on track to meet its SB 32 GHG reduction target of at least 40 percent below 1990 emissions by 2030.
- Identifies a technologically feasible, cost-effective path to achieve carbon neutrality by 2045 and a reduction in anthropogenic emissions by 85 percent below 1990 levels.
- Focuses on strategies for reducing California's dependency on petroleum to provide consumers with clean energy options that address climate change, improve air quality, and support economic growth and clean sector jobs.
- Integrates equity and protecting California's most impacted communities as driving principles throughout the document.
- Incorporates the contribution of natural and working lands to the State's GHG emissions, as well as their role in achieving carbon neutrality.
- Relies on the most up-to-date science, including the need to deploy all viable tools to address the existential threat that climate change presents, including carbon capture and sequestration, as well as direct air capture.
- Evaluates the substantial health and economic benefits of taking action.
- Identifies key implementation actions to ensure success.

In addition to reducing emissions from transportation, energy, and industrial sectors, the 2022 Update includes emissions and carbon sequestration in natural and working lands and explores how they contribute to long-term climate goals. Under the Scoping Plan Scenario, California's 2030 emissions are anticipated to be 48 percent below 1990 levels, representing an acceleration of the current SB 32 target. Cap-and-trade regulation continues to play a large factor in the reduction of near-term emissions for meeting the accelerated 2030 reduction target. Every sector of the economy will need to begin to transition in this decade to meet these GHG emissions reduction goals and achieve carbon neutrality no later than 2045. The 2022 Update approaches decarbonization from two perspectives, managing a

phasedown of existing energy sources and technologies, as well as increasing, developing, and deploying alternative clean energy sources and technology.

3.2.2.5 Executive Order B-32-15 and California Sustainable Freight Action Plan

In July 2015, Governor Brown issued Executive Order B-32-15, which provides a vision for California's transition to a more efficient, more economically competitive, and less polluting freight transport system. This transition of California's freight transport system is essential to supporting the State's economic development while reducing harmful pollution affecting many communities. As a key first step, the Governor's Executive Order directed the California State Transportation Agency, CalEPA, Natural Resources Agency, California Air Resources Board, California Department of Transportation, California Energy Commission (CEC), and Governor's Office of Business and Economic Development to develop a California Sustainable Freight Action Plan, which was completed in July 2016. The plan provides a vision for an integrated approach to coordinate State agency priorities and timing on actions to influence freight transportation and energy infrastructure, vehicle and equipment technologies, and facility and operations efficiency. The Action Plan includes recommendations on a long-term 2050 Vision and Guiding Principles for California's future freight transport system and targets for 2030 to guide the State toward meeting the Vision.

3.2.2.6 Executive Order N-79-20

Governor Gavin Newsom signed an executive order on September 23, 2020, that would phase out sales of new gas-powered passenger cars by 2035 with an additional 10-year transition period for heavy vehicles. The State would not restrict used car sales, nor forbid residents from owning gas-powered vehicles, meaning that the overall reduction in GHG emissions would likely not substantially reduce GHG emissions from vehicles for many years after the ban goes into effect.

3.2.2.7 Executive Order B-55-18

Executive Order B-55-18 establishes a new Statewide goal to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter. The Executive Order directs CARB to develop a framework for implementing this goal and directs CARB to work with State agencies to ensure future Scoping Plans incorporate measures to achieve carbon neutrality by 2045.

3.2.2.8 Assembly Bill 1279

In September 2022, Governor Brown signed AB 1279, The California Climate Crisis Act, which requires California to achieve carbon neutrality as soon as possible, but no later than 2045, and to achieve and maintain net negative GHG emissions thereafter. AB 1279 also requires that by 2045 statewide anthropogenic GHG emissions be reduced to at least 85 percent below 1990 levels and directs CARB to ensure that its scoping plan identifies and recommends measures to achieve these goals. AB 1279 also directs CARB to identify policies and strategies to enable carbon capture, utilization, and storage and CO₂

removal technologies to meet emission reduction goals. In addition, CARB is required to submit an annual report on progress in achieving the 2022 Scoping Plan's goals.

3.2.2.9 2022 Building Energy Efficiency Standards for Residential and Nonresidential Buildings

The Building and Efficiency Standards (Energy Standards) were first adopted and put into effect in 1978 and have been updated periodically in the intervening years. These standards are a unique California asset that have placed the State on the forefront of energy efficiency, sustainability, energy independence and climate change issues. The 2022 California Building Codes include provisions related to energy efficiency to reduce energy consumption and greenhouse gas emissions from buildings. Some of the key energy efficiency components of the codes are:

1. **Energy Performance Requirements:** The codes specify minimum energy performance standards for the building envelope, lighting, heating and cooling systems, and other components.
2. **Lighting Efficiency:** The codes require that lighting systems meet minimum efficiency standards, such as the use of energy-efficient light bulbs and fixtures.
3. **HVAC Systems:** The codes establish requirements for heating, ventilation, and air conditioning (HVAC) systems, including the use of high-efficiency equipment, duct sealing, and controls.
4. **Building Envelope:** The codes include provisions for insulation, air sealing, glazing, and other building envelope components to reduce energy loss and improve indoor comfort.
5. **Renewable Energy:** The codes encourage the use of renewable energy systems, such as photovoltaic panels and wind turbines, to reduce dependence on non-renewable energy sources.
6. **Commissioning:** The codes require the commissioning of building energy systems to ensure that they are installed and operate correctly and efficiently.

Overall, the energy efficiency provisions of the 2022 California Building Codes aim to reduce the energy consumption of buildings, lower energy costs for building owners and occupants, and reduce the environmental impact of the built environment. The 2022 Building Energy Efficiency Standards improve upon the 2019 Energy Standards for new construction of, and additions and alterations to, residential and nonresidential buildings. The exact amount by which the 2022 Building Codes are more efficient compared to the 2019 Building Codes would depend on the specific provisions that have been updated and the specific building being considered. However, in general, the 2022 Building Codes have been updated to include increased requirements for energy efficiency, such as higher insulation and air sealing standards, which are intended to result in more efficient buildings. The 2022 standards are a major step toward meeting Zero Net Energy.

3.2.2.10 Energy and GHG Reduction Regulations (Stationary Sources)

SB 1368, signed September 29, 2006, is a companion bill to AB 32, which requires the CPUC and the CEC to establish GHG emission performance standards for the generation of electricity. These standards also

generally apply to power that is generated outside of California and imported into the State. SB 1368 provides a mechanism for reducing the emissions of electricity providers, thereby assisting CARB to meet its mandate under AB 32.

SB 1078 (Chapter 516, Statutes of 2002) required retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20 percent of their supply from renewable sources by 2017 as a renewable portfolio standard (RPS). Subsequent amendments provided additional targets throughout the years. Most recently, on October 7, 2015, SB 350 (Chapter 547, Statutes of 2015), also known as the Clean Energy and Pollution Reduction Act, further increased the RPS to 50 percent by 2030. The legislation also included interim targets of 40 percent by 2024 and 45 percent by 2027. SB 350 also requires the State to double Statewide energy efficiency savings in electricity and natural gas end uses by 2030. The 2017 Scoping Plan incorporated the SB 350 standards and estimated the GHG reductions in the electric section would account for approximately 21 percent of the 2017 Scoping Plan reductions. On September 10, 2018, SB 100, provided additional RPS targets of 44 percent by 2024, 52 percent by 2027, and 60 percent by 2030, and that CARB should plan for 100 percent eligible renewable energy resources and zero-carbon resources by 2045.

3.2.2.11 Senate Bill 1020

SB 1020, the Clean Energy, Jobs, and Affordability Act of 2022, adds interim targets to the policy framework originally established in SB 100 to require renewable energy and zero-carbon resources to supply 90% of all retail electricity sales by 2035 and 95% of all retail electricity sales by 2040. Additionally, the bill requires all state agencies to rely on 100% renewable energy and zero-carbon resources to serve their own facilities by 2035. This bill also requires that CARB's Scoping Plan workshops be held in non-attainment areas and requires the California Public Utilities Commission, the California Energy Commission, and CARB to create a joint report on electricity reliability.

3.2.3 Regional

3.2.3.1 South Coast Air Quality Management District

To provide guidance to local lead agencies on determining significance for GHG emissions in CEQA documents, SCAQMD staff is convening an ongoing GHG CEQA Significance Threshold Working Group. Members of the working group include government agencies implementing CEQA and representatives from various stakeholder groups that provide input to SCAQMD staff on developing the significance thresholds. On October 8, 2008, the SCAQMD released the Draft AQMD Staff CEQA GHG Significance Thresholds. These thresholds have not been finalized and continue to be developed through the working group.

The Draft AQMD Staff CEQA GHG Significance Thresholds guidance document, which builds on the previous guidance prepared by the California Air Pollution Control Officers Association (CAPCOA), explored various approaches for establishing a significance threshold for GHG emissions and was described as a "work in progress" of efforts to date. However, the draft interim CEQA thresholds guidance document was not adopted or approved by the Governing Board. In December 2008, the SCAQMD adopted a 10,000 metric tons of CO₂e per year threshold for stationary source/industrial projects for which the SCAQMD is the lead

agency. From December 2008 to September 2010, SCAQMD hosted working group meetings and revised the draft threshold proposal several times, although it did not officially provide these proposals in a subsequent document. SCAQMD has continued to consider adoption of significance thresholds for residential and general land use development projects. The most recent proposal, issued in September 2010, used the following tiered approach to evaluate potential GHG impacts from various uses:

- Tier 1 Determine if CEQA categorical exemptions are applicable. If not, move to Tier 2.
- Tier 2 Consider whether or not the proposed project is consistent with a locally adopted GHG reduction plan that has gone through public hearing and CEQA review, that has an approved inventory, includes monitoring, etc. If not, move to Tier 3.
- Tier 3 Consider whether the project generates GHG emissions in excess of screening thresholds for individual land uses. The 10,000 metric tons of CO₂e per year threshold for industrial uses would be recommended for use by all lead agencies. Under option 1, separate screening thresholds are proposed for residential projects (3,500 metric tons of CO₂e per year), commercial projects (1,400 metric tons of CO₂e per year), and mixed-use projects (3,000 metric tons of CO₂e per year). Under option 2, a single numerical screening threshold of 3,000 metric tons of CO₂e per year would be used for all non-industrial projects. If the project generates emissions in excess of the applicable screening threshold, move to Tier 4.
- Tier 4 Consider whether the project generates GHG emissions in excess of applicable performance standards for the project service population (population plus employment). The efficiency targets were established based on the goal of AB 32 to reduce statewide GHG emissions by 40 percent by 2035. The efficiency-based threshold of 3.0 metric tons of CO₂e per service population (defined as the people that work and/or congregate on the Project Site) per year in 2035. If the project generates emissions in excess of the applicable efficiency targets, move to Tier 5.
- Tier 5 Consider the implementation of CEQA mitigation (including the purchase of GHG offsets) to reduce the project efficiency target to Tier 4 levels.

The SCAQMD has not announced when staff are expecting to present a finalized version of its GHG thresholds to the governing board.

These thresholds were developed as part of the SCAQMD GHG CEQA Significance Threshold Working Group. This working group was formed to assist SCAQMD's efforts to develop a GHG significance threshold and is composed of a wide variety of stakeholders including the State Office of Planning and Research (OPR), CARB, the Attorney General's Office, a variety of city and county planning departments in the SoCAB, various utilities such as sanitation and power companies throughout the SoCAB, industry groups, and environmental and professional organizations. These thresholds were developed to be consistent with CEQA requirements for developing significance thresholds, are supported by substantial evidence, and provides guidance to CEQA practitioners with regard to determining whether GHG emissions from a proposed land use project are significant.

3.2.3.2 Southern California Association of Governments

In April 2024, the SCAG Regional Council adopted the *2024-2050 Regional Transportation Plan/ Sustainable Communities Strategy* (2024 RTP/SCS). The 2024 RTP/SCS charts a course for closely integrating land use and transportation – so that the region can grow smartly and sustainably. It was prepared through a collaborative, continuous, and comprehensive process with input from local governments, county transportation commissions, tribal governments, non-profit organizations, businesses and local stakeholders within the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. The 2024 RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental and public health goals. The SCAG region strives toward sustainability through integrated land use and transportation planning. The SCAG region must achieve specific federal air quality standards and is required by state law to lower regional GHG emissions. Specifically, the region has been tasked by CARB to achieve a 19 percent per capita reduction by the end of 2035.

3.2.4 Local

3.2.4.1 City of Brea Municipal Code

Chapter 15.24: Green Building Standards Code

Under Section 15.24.010 of the City's Green Building Standards, the 2022 California Green Building Standards Code is adopted in its entirety and shall be and become the Green Building Standards Code of the City of Brea.

Chapter 15.28: Energy Code

Under Section 15.28.010 of the City's Energy Code, the 2022 California Energy Code is adopted in its entirety and shall be and become the Energy Code of the City of Brea.

3.2.4.2 City of Brea General Plan—Public Safety Chapter

The Public Safety Chapter of the City's General Plan, amended in 2021, contains goals and policies that provide the basis for public safety plans and measures, identify standards and programs to protect public safety, and outline adequate facilities and services to meet the emergency needs of the City. The Public Safety Chapter also includes strategies to eliminate, counter, and/or minimize the impacts of potential natural or manmade hazards. The Public Safety Chapter's includes the following policy related to climate change:

Policy PS-1.15: Consider climate change vulnerability in planning decisions, including those involving new public facilities and private development.

3.3 Greenhouse Gas Emissions Impact Assessment

3.3.1 Thresholds of Significance

The impact analysis provided below is based on the following CEQA Guidelines Appendix G thresholds of significance. The Project would result in a significant impact to greenhouse gas emissions if it would:

- 1) Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment.
- 2) Conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

The Appendix G thresholds for GHG emissions do not prescribe specific methodologies for performing an assessment, do not establish specific thresholds of significance, and do not mandate specific mitigation measures. Rather, the CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance consistent with the manner in which other impact areas are handled in CEQA. With respect to GHG emissions, the CEQA Guidelines Section 15064.4(a) states that lead agencies "shall make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate" GHG emissions resulting from a project. The CEQA Guidelines note that an agency has the discretion to either quantify a project's GHG emissions or rely on a "qualitative analysis or other performance-based standards." (14 CCR 15064.4(b)). A lead agency may use a "model or methodology" to estimate GHG emissions and has the discretion to select the model or methodology it considers "most appropriate to enable decision makers to intelligently take into account the project's incremental contribution to climate change." (14 CCR 15064.4(c)). Section 15064.4(b) provides that the lead agency should consider the following when determining the significance of impacts from GHG emissions on the environment:

1. The extent a project may increase or reduce GHG emissions as compared to the existing environmental setting.
2. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
3. The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions (14 CCR 15064.4(b)).

In addition, Section 15064.7(c) of the CEQA Guidelines specifies that "[w]hen adopting or using thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence" (14 CCR 15064.7(c)). The CEQA Guidelines also clarify that the effects of GHG emissions are cumulative and should be analyzed in the context of CEQA's requirements for cumulative impact analysis (see CEQA Guidelines Section 15130). As a note, the CEQA

Guidelines were amended in response to Senate Bill 97. In particular, the CEQA Guidelines were amended to specify that compliance with a GHG emissions reduction plan renders a cumulative impact insignificant.

Per CEQA Guidelines Section 15064(h)(3), a project's incremental contribution to a cumulative impact can be found not cumulatively considerable if the project would comply with an approved plan or mitigation program that provides specific requirements that would avoid or substantially lessen the cumulative problem within the geographic area of the project. To qualify, such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency. Examples of such programs include a "water quality control plan, air quality attainment or maintenance plan, integrated waste management plan, habitat conservation plan, natural community conservation plans [and] plans or regulations for the reduction of greenhouse gas emissions." Put another way, CEQA Guidelines Section 15064(h)(3) allows a lead agency to make a finding of less than significant for GHG emissions if a project complies with adopted programs, plans, policies and/or other regulatory strategies to reduce GHG emissions.

The local air quality agency regulating the SoCAB is the SCAQMD, the regional air pollution control officer for the basin. As previously stated, to provide guidance to local lead agencies on determining significance for GHG emissions in CEQA documents, SCAQMD staff convened a GHG CEQA Significance Threshold Working Group. The Working Group was formed to assist the SCAQMD's efforts to develop a GHG significance threshold and is composed of a wide variety of stakeholders including the State Office of Planning and Research (OPR), CARB, the Attorney General's Office, a variety of city and county planning departments in the Basin, various utilities such as sanitation and power companies throughout the Basin, industry groups, and environmental and professional organizations. The numeric bright line and efficiency-based thresholds described above were developed to be consistent with CEQA requirements for developing significance thresholds, are supported by substantial evidence, and provide guidance to CEQA practitioners and lead agencies with regard to determining whether GHG emissions from a proposed project are significant.

In *Center for Biological Diversity v. Department of Fish and Wildlife* (2015) 62 Cal. 4th 2014, 213, 221, 227, following its review of various potential GHG thresholds proposed in an academic study [Crockett, *Addressing the Significance of Greenhouse Gas Emissions: California's Search for Regulatory Certainty in an Uncertain World* (July 2011), 4 Golden Gate U. Envtl. L. J. 203], the California Supreme Court identified the use of numeric bright line thresholds as a potential pathway for compliance with CEQA GHG requirements. The study found numeric bright line thresholds designed to determine when small projects were so small as to not cause a cumulatively considerable impact on global climate change was consistent with CEQA. Specifically, Public Resources Code section 21003(f) provides it is a policy of the State that "[a]ll persons and public agencies involved in the environmental review process be responsible for carrying out the process in the most efficient, expeditious manner in order to conserve the available financial, governmental, physical and social resources with the objective that those resources may be better applied toward the mitigation of actual significant effects on the environment." The Supreme Court-reviewed study noted, "[s]ubjecting the smallest projects to the full panoply of CEQA requirements, even though the public benefit would be minimal, would not be consistent with implementing the statute in the most efficient, expeditious manner.

Nor would it be consistent with applying lead agencies' scarce resources toward mitigating actual significant climate change impacts." (Crockett, *Addressing the Significance of Greenhouse Gas Emissions: California's Search for Regulatory Certainty in an Uncertain World* (July 2011), 4 Golden Gate U. Env'tl. L. J. 203, 221, 227.)

CEQA Guidelines Section 15064.4(b)(2) allows the City to determine a threshold of significance that applies to the Project. However, the City has not adopted a numeric threshold for the analysis of GHG impacts. Therefore, the significance of the Project's GHG emissions is evaluated consistent with CEQA Guidelines Section 15064.4(b)(3) by considering whether the Project complies with applicable plans, policies, regulations and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. Although not directly applicable to the Project because the City, not SCAQMD, is the lead agency for the Project, the SCAQMD's bright line screening threshold of 10,000 metric tons of CO₂e annually for stationary source/industrial land uses is an appropriate threshold to consider for the Project's proposed merchandise warehouse use. Thus, the Project's GHG emissions is compared to SCAQMD's industrial bright line screening threshold for informational purposes only.

3.3.2 Methodology

Where GHG emission quantification was required, emissions were modeled using CalEEMod, version 2022.1. CalEEMod is a statewide land use emissions computer model designed to quantify potential GHG emissions associated with both construction and operations from a variety of land use projects. Project construction-generated GHG emissions are calculated using a combination of CalEEMod model defaults for Orange County and information provided by the Project proponent, specifically the demolition square footage, construction of new square footage, construction equipment employed during each phase of construction, the construction schedule, and the amount of soil material that would be imported and exported from the site. Operational air pollutant emissions were based on the site acreage and building dimensions provided by the Project Site plans and daily trip numbers provided in the VMT Report.⁴¹ The VMT Report estimates the Project's maximum daily vehicle generation would consist of 62 heavy duty truck trips, 1,346 passenger car trips, and 690 van trips. The average truck trip length is calculated at 52 miles, which represents the average distance between the Project Site and the Port of Los Angeles/Long Beach, the Project Site and the Banning Pass, the Project Site and the San Diego County line, the Project Site and the Cajon Pass, and the Project Site and downtown Los Angeles, consistent with SCAQMD recommendation for calculating heavy-duty truck emissions. For the purposes of this analysis, operational GHG emissions associated with the Project are compared to the existing baseline condition, which includes a 637,503 square foot office building and 1,949 parking spaces as well as 4,818 daily vehicle trips.⁴²

As stated above, the Project's GHG emissions are compared to SCAQMD's bright line threshold of 10,000 metric tons of CO₂e annually for informational purposes. However, the Project's potential impacts related to GHG is determined by considering whether the Project complies with applicable plans, policies, regulations and requirements adopted to implement a statewide, regional, or local plan for the reduction

⁴¹ NV5. 2024. Vehicle Miles Traveled Analysis for Brea Delivery Station.

⁴² Ibid.

or mitigation of GHG emissions. Thus the Project is evaluated for consistency with the 2022 Climate Change Scoping Plan, the 2020–2045 RTP/SCS, and applicable City of Brea policies and regulations, which are intended to reduce GHG emissions to meet the statewide targets set forth in AB 32 and amended by SB 32. If the Project is not in conflict with these applicable regulatory plans, regulations, and policies to reduce GHG emissions, then the Project would result in a less than significant impact with respect to GHG emissions.

3.3.3 Impact Analysis

3.3.3.1 Generation of GHG Emissions

Project Construction

Construction-related activities that would generate GHG emissions include worker commute trips, haul trucks carrying supplies and materials to and from the Project Site, and off-road construction equipment (e.g., dozers, loaders, excavators). Table 3-3 illustrates the specific construction generated GHG emissions that would result from construction of the Project. Once construction is complete, the generation of these GHG emissions would cease.

Table 3-3. Construction-Related Greenhouse Gas Emissions	
Emissions Source	CO₂e (Metric Tons/ Year)
Construction Calendar Year One	1,418
Construction Calendar Year Two	1,090
Construction Calendar Year Three	307
Construction Emissions (amortized over the 30-year life of the Project)	94
Total Construction Emissions	2,909 Co₂e (metric tons)

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

Notes: Project construction generated emissions are calculated using a combination of CalEEMod model defaults for Orange County and information provided by the Project proponent, specifically the construction equipment and model years for equipment that would be employed during all phases of construction, the construction schedule and the amount of soil material that would be exported from the site (25,680 cubic yards). The 13 tractor rig and 180 van queuing/loading spaces were accounted for in CalEEMod by increasing the total acreage of the modeled industrial and parking land use.

As shown in Table 3-3, Project construction would result in the generation of approximately 2,909 metric tons of CO₂e over the course of construction. Once construction is complete, the generation of these GHG emissions would cease. Consistent with SCAQMD recommendations, Project construction GHG emissions have been amortized of the expected life of the Project, which is considered to be 30 years per the SCAQMD and added to the annual average operational emissions (see Table 3-4).

Project Operations

Operation of the Project would generate GHG emissions primarily associated with mobile sources. Long-term operational GHG emissions attributed to the Project are identified in Table 3-4.

Table 3-4. Operational-Related Greenhouse Gas Emissions	
Emissions Source	CO₂e (Metric Tons/ Year)
Proposed Project	
Construction Emissions (amortized over the 30-year life of the Project)	94
Mobile	6,084

Solid Waste	-132
Refrigerants	<1
Total:	-3,037
<i>SCAQMD Numeric Significance Threshold</i>	<i>10,000</i>
Exceed SCAQMD Numeric Threshold?	No

Table 3-4. Operational-Related Greenhouse Gas Emissions	
Emissions Source	CO₂e (Metric Tons/ Year)

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

Notes: Emission projections predominately based on CalEEMod model defaults for Orange County, site acreage and building dimensions provided by the Project Site Plans, and maximum daily vehicle trips provided in the VMT Report by NV5 Engineers & Consultants 2024. Specifically, the VMT Report estimates the Project generation would consist of 62 maximum daily heavy duty truck trips, 1,346 maximum daily passenger car trips, and 690 maximum daily van trips. All daily passenger car trips and van trips are assumed to be gas powered vehicles. The average van trips length was taken from the Project’s VMT Report (NV5 Engineers & Consultants 2024). The average truck trip length is calculated at 52 miles, which represents the average distance between the Project Site and the Port of Los Angeles/Long Beach, the Project Site and the Banning Pass, the Project Site and the San Diego County line, the Project Site and the Cajon Pass, and the Project Site and downtown Los Angeles. CalEEMod GHG emissions associated with the existing baseline condition account for a 637,503 square foot office building, 949 parking spaces and 4,818 maximum daily vehicle trips (NV5 Engineers & Consultants 2024).

As shown in Table 3-4, the Project’s operational GHG emissions would be less than the GHG emissions generated by the existing baseline condition and the Project’s net operational emissions would not exceed the SCAQMD’s numeric bright line screening threshold of 10,000 metric tons of CO₂e annually. Although not directly applicable to the Project because the City, not SCAQMD, is the lead agency for the Project, the SCAQMD’s bright line screening threshold of 10,000 metric tons of CO₂e annually for stationary source/industrial land uses is an appropriate threshold to consider for the Project’s proposed merchandise warehouse use. As such, this threshold is considered in this analysis for informational purposes. However, the significance of the Project’s potential impacts regarding GHG emissions and climate change is not determined by the SCAQMD bright line screening threshold, but by the Project’s consistency with applicable plans, regulations, and policies as discussed in more detail below.

3.3.3.2 Consistency with Applicable Plan, Policy, or Regulation of an Agency Adopted for the Purpose of Reducing the Emissions of Greenhouse Gases

The City of Brea has not adopted a Climate Action Plan or any other plan for the purpose of reducing GHG emissions. However, the State of California promulgates several mandates and goals to reduce statewide GHG emissions, including the goal to reduce statewide GHG emissions to 40 percent below 1990 levels by the year 2030 (SB 32) and 80 percent below 1990 levels by the year 2050 (Executive Order S-3-05). Several plans and policies have been adopted to reduce GHG emissions in compliance with these mandates and goals, including the State’s 2022 Scoping Plan, SCAG’s 2020-2045 RTP/SCS, and applicable City of Brea regulations and policies. The Proposed Project’s consistency with these plans are discussed in detail below.

2022 Scoping Plan

As shown in Table 3-5 the 2022 Scoping Plan strategies that are applicable to the Project include reducing fossil fuel use, energy demand, and VMT; maximizing recycling and diversion from landfills; and increasing water conservation. The Project would be consistent with these goals through Project design, which includes complying with the latest requirements of the CALGreen Code and Building Energy Efficiency Standards, providing EV parking spaces and charging equipment, and complying with the AB 341 waste diversion goal of 75 percent. In addition, the Project would receive electricity from Southern California Edison, which is

required to reduce GHG emissions by increasing procurement from eligible renewable energy by set target years. Furthermore, as discussed in the VMT Report, the VMT generated by the Project is less than the VMT generated by the existing baseline condition (Bank of America use). The Project meets the Project Type screening criterion in the City’s Transportation Impact Assessment Guidelines and would have a less-than-significant VMT impact.

The Project would also include short-term and long-term bike parking spaces as well as connectivity improvements to The Tracks at Brea. Currently, the trail ends near the northwest corner of the Project Site and resumes further down Imperial Highway away from the Project Site. The Project would improve the bike and walkway path, extending The Tracks at Brea along the Nasa Street Project frontage to the intersection of Valencia and Nasa Street. The proposed path would move south along Surveyor Avenue, wrap around Nasa Street and continue east to Valencia Avenue. In addition, the Project would provide electric vehicle (EV) charging stations and EV-ready spaces.

Table 3-5. Consistency with 2022 Scoping Plan	
Actions and Strategies	Project Consistency Analysis
Smart Growth / Vehicles Miles Traveled (VMT)	
Reduce VMT per capita to 25% below 2019 levels by 2030, and 30% below 2019 levels by 2045	Consistent. The Project would include the installation of EV charging stations in accordance with the CALGreen requirements. Under the Project, approximately 18 associate vehicle parking spaces would have EV charging stations installed at Project completion. In addition, 46 associate vehicle parking spaces would have conduit installed to accommodate the potential installation of electrical charging stations for electrical passenger vehicles. Further, some delivery van spaces and 4 trailer spaces would have conduit run to stalls to accommodate the potential addition of future charging stations. In addition, the Project would provide bicycle parking spaces and would improve the bike and walkway path, extending The Tracks at Brea along the Nasa Street Project frontage to the intersection of Valencia and Nasa Street. The proposed path would move south along Surveyor Avenue, wrap around Nasa Street and continue east to Valencia Avenue. Furthermore, as detailed in the VMT Report, the VMT generated by the Project is less than the VMT generated by the existing baseline condition, resulting in a decrease in VMT from the Project Site. As such, the Project would be consistent with this action.
Provide EV charging infrastructure that, at minimum, meets the most ambitious voluntary standard in the California Green Building Standards Code at the time of project approval	Consistent. As described above, under the Project, approximately 18 associate vehicle parking spaces would have EV charging stations installed at Project completion. In addition, 46 associate vehicle parking spaces would have conduit installed to accommodate the potential installation of electrical charging stations for electrical passenger vehicles. Further, some delivery van spaces and 4 trailer spaces would have conduit run to stalls to accommodate the potential addition of future charging stations. As such, the Project would be consistent with this action.
New Residential and Commercial Buildings	
All electric appliances beginning 2026 (residential) and 2029 (commercial), contributing to 6 million heat pumps installed statewide by 2030	Consistent. The Project proposes to construct 163,350 square feet of merchandise warehouse space and 18,150 square feet of ancillary office space. Currently, the City has not adopted an ordinance or program limiting the use of natural gas for heating. Additionally, the City also does

Use all-electric appliances without any natural gas connections and does not use propane or other fossil fuels for space heating, water heating, or indoor cooking.	not have any policy that requires an all-electric development. Thus, the Project is anticipated to include natural gas appliances. However, if policies related to all-electric development are adopted in the future, the Project would comply with the applicable goals or policies limiting the use of natural gas equipment in the future and/or requiring all electric developments. Furthermore, the Project would comply with Title 24 standards which would reduce energy consumption. The Project would be consistent with this action.
Construction Equipment	
Achieve 25% of energy demand electrified by 2030 and 75% electrified by 2045	Not Applicable. Currently, the City has not adopted an ordinance or program requiring electricity-powered construction equipment. However, if such programs or ordinance is adopted in the future, the Project would be required to comply with the applicable goals or policies requiring the use of electric construction equipment in the future.
Non-combustion Methane Emissions	
Divert 75% of organic waste from landfills by 2025	Not Applicable. SB 1383 establishes targets to achieve a 50 percent reduction by 2022 in the level of the statewide disposal of organic waste and a 75 percent reduction by 2025. The Project is not a residential development and would not be a generator of organic waste. As such, the Project would not preclude this action.
Developed Lands	
Increase urban forestry investment by 200% above current levels and utilize tree watering that is 30% less sensitive to drought.	Consistent. The Project would exceed City tree planting requirements by providing 286 parking lot trees, 82 perimeter interior trees, and 152 perimeter street abutting trees. The Project would provide approximately 323,744 square feet of landscaping, including perimeter landscaping and maintained landscaped areas throughout the site. The Project would also comply with the City's water efficient landscape requirements and would provide drought tolerant landscaping and water-efficient irrigation via a drip irrigation system utilizing a Smart Controller to moderate water use. As such, the Project would be consistent with this action.

As such, the Project would encourage alternative modes of transportation and would include land uses that would reduce total VMT. In addition, the Project would also support the reduction of GHG emissions by providing new and drought tolerant landscaping and water-efficient irrigation in compliance with the City's water efficient landscape requirements.

Therefore, the Project would not conflict with the 2022 Scoping Plan.

SCAG 2020-2045 RTP/SCS

As discussed above, although SCAG has approved the 2024–2050 RTP/SCS, CARB has not formally accepted the 2024–2050 RTP/SCS's quantification of GHG emission reductions. Accordingly, the Project is evaluated for consistency with the 2020-2045 RTP/SCS, as shown in Table 3-6.

The 2020-2045 RTP/SCS includes goals with corresponding implementation strategies for focusing growth near destinations and mobility options, promoting diverse housing choices, leveraging technology innovations, and supporting implementation of sustainability policies. These strategies include similar measures to the 2022 Scoping Plan, such as encouraging the use of EVs and alternative modes of transportation. The Project complies with the 2022 CalGreen Code, which was adopted by reference by the

City of Brea per BCC Section 15.24.010, and would provide sustainability features such as energy efficient appliances and lighting, a solar-ready roof, EV charging stations, and EV capable stalls.

Additionally, the objectives of the Proposed Project also align with various aspects of the SCAG’s RTP/SCS, which include supporting the goods movement industry and balancing job and housing opportunities in local areas to reduce long commutes from home to work. The Project would efficiently develop an underutilized property that would absorb portions of the service areas that are currently covered by existing delivery stations, which would allow the Project to reduce the distance traveled by delivery vans throughout the region. The Project aims to establish a last-mile parcel delivery facility that has nearby access to freeways in order to efficiently facilitate the movement of goods. It is noted that the Project would generate approximately 30 percent less GHG emissions compared with the existing baseline condition (see Table 3-4). Furthermore, the Project allows the expansion of economic development and facilitated job creation in the City. The Project would generate employment opportunities that would maintain the jobs-housing balance in the area and reduce commuter trips and GHG emissions by providing jobs to those who already live near the Project Site or in the City. All of these factors are consistent with the goals of the RTP/SCS, which as previously described was developed with the target of a 19 percent reduction in GHG emissions by 2035 compared with 2005 levels and a 21 percent reduction by 2040 compared with 2005 levels.

Therefore, the Project would not conflict with the SCAG 2020-2045 RTP/SCS.

Table 3-6. Consistency with the SCAG 2020-2045 RTP/SCS		
Reduction Strategy	Applicable Land Use Tools	Project Consistency Analysis
Focus Growth Near Destinations and Mobility Options		
<ul style="list-style-type: none"> • Emphasize land use patterns that facilitate multimodal access to work, educational and other destinations • Focus on a regional jobs/housing balance to reduce commute times and distances and expand job opportunities near transit and along center-focused main streets • Plan for growth near transit investments and support implementation of first/last mile strategies • Promote the redevelopment of underperforming retail developments and other outmoded nonresidential uses • Prioritize infill and redevelopment of underutilized land to accommodate new growth, increase amenities and connectivity in existing neighborhoods • Encourage design and transportation options that reduce the reliance on and number of solo car trips (this could 	Center Focused Placemaking, Priority Growth Areas (PGA), Job Centers, High Quality Transit Areas (HQTAs), Transit Priority Areas (TPA), Neighborhood Mobility Areas (NMAs), Livable Corridors, Spheres of Influence (SOIs), Green Region, Urban Greening.	<p>Consistent. The Project would develop a last-mile parcel delivery facility, consisting of 163,350 square feet of merchandise warehouse space and 18,150 square feet of ancillary office space, on an underutilized 31.6-acre site. The Project would improve the existing site by helping meet the unmet regional demands for goods delivery services and reducing the delivery distances traveled. Furthermore, as detailed in the VMT Report, the VMT generated by the Project would be less than the VMT for the existing baseline condition; as such, the Project would result in a reduction in VMT from the Project Site.</p> <p>The Project would promote alternative transportation options by providing EV charging stations, bike parking spaces, and increased connectivity with The Tracks at Brea, which is a localized portion of the regional Orange County Loop trail network adjacent to the Project Site. Specifically, the Project would improve the bike and walkway path extending The Tracks along the Nasa Street Project frontage to the intersection of</p>

Table 3-6. Consistency with the SCAG 2020-2045 RTP/SCS		
Reduction Strategy	Applicable Land Use Tools	Project Consistency Analysis
<p>include mixed uses or locating and orienting close to existing destinations)</p> <ul style="list-style-type: none"> Identify ways to “right size” parking requirements and promote alternative parking strategies (e.g., shared parking or smart parking) 		<p>Valencia Avenue and Nasa Street. In addition, the Project would provide a solar-ready rooftop. Therefore, the Project would focus growth near destinations and mobility options. The Project would be consistent with this reduction strategy.</p>
Leverage Technology Innovations		
<ul style="list-style-type: none"> Promote low emission technologies such as neighborhood electric vehicles, shared rides hailing, car sharing, bike sharing and scooters by providing supportive and safe infrastructure such as dedicated lanes, charging and parking/drop-off space Improve access to services through technology—such as telework and telemedicine as well as other incentives such as a “mobility wallet,” an app-based system for storing transit and other multi-modal payments Identify ways to incorporate “micro-power grids” in communities, for example solar energy, hydrogen fuel cell power storage and power generation 	<p>HQTA, TPAs, NMA, Livable Corridors.</p>	<p>Consistent. The Project would install EV charging stations in accordance with the CALGreen requirements. Under the Project, approximately 18 associate vehicle parking spaces would have EV charging stations installed at Project completion. In addition, 46 associate vehicle parking spaces would have conduit installed to accommodate the potential installation of electrical charging stations for electrical passenger vehicles. Further, some delivery van spaces and 4 trailer spaces would have conduit run to stalls to accommodate the potential addition of future charging stations. In addition, the Project would provide bicycle parking spaces onsite and a solar-ready roof. Therefore, the proposed Project would leverage technology innovations to promote alternative modes of transportation and support GHG reductions. The Project would be consistent with this reduction strategy.</p>
Support Implementation of Sustainability Policies		
<ul style="list-style-type: none"> Pursue funding opportunities to support local sustainable development implementation projects that reduce greenhouse gas emissions Support statewide legislation that reduces barriers to new construction and that incentivizes development near transit corridors and stations Support local jurisdictions in the establishment of Enhanced Infrastructure Financing Districts (EIFDs), Community Revitalization and Investment Authorities (CRIAs), or other tax increment or value capture tools to finance sustainable infrastructure and development projects, including parks and open space Work with local jurisdictions/communities to identify opportunities and assess barriers to implement sustainability strategies 	<p>Center Focused Placemaking, PGA, Job Centers, HQTAs, TPA, NMAs, Livable Corridors, Spheres of Influence, Green Region, Urban Greening.</p>	<p>Consistent. As previously discussed, the Proposed Project would provide a solar-ready roof, EV charging stations, and bike storage spaces to promote alternative modes of transportation. In addition, the Project would comply with sustainable practices included in the most current and applicable Title 24 standards and California Building Code requirements, including the installation of EV charging stations, bicycle parking spaces, and high efficiency lighting. The Project would also comply with the City’s water efficient landscape requirements and would provide drought tolerant landscaping and water-efficient irrigation via a drip irrigation system utilizing a Smart Controller to moderate water use. Furthermore, the Project would improve a currently underutilized industrial site by helping meet the unmet regional demands for goods delivery services and reducing the delivery distances traveled. Therefore, the Project would be consistent with this reduction strategy.</p>

Table 3-6. Consistency with the SCAG 2020-2045 RTP/SCS		
Reduction Strategy	Applicable Land Use Tools	Project Consistency Analysis
<ul style="list-style-type: none"> • Enhance partnerships with other planning organizations to promote resources and best practices in the SCAG region • Continue to support long range planning efforts by local jurisdictions • Provide educational opportunities to local decisions makers and staff on new tools, best practices and policies related to implementing the Sustainable Communities Strategy 		
Promote a Green Region		
<ul style="list-style-type: none"> • Support development of local climate adaptation and hazard mitigation plans, as well as project implementation that improves community resiliency to climate change and natural hazards • Support local policies for renewable energy production, reduction of urban heat islands and carbon sequestration • Integrate local food production into the regional landscape • Promote more resource efficient development focused on conservation, recycling and reclamation • Preserve, enhance and restore regional wildlife connectivity • Reduce consumption of resource areas, including agricultural land • Identify ways to improve access to public park space 	<p>Green Region, Urban Greening, Greenbelts and Community Separators.</p>	<p>Consistent. As described above, the Project would be solar-ready and would be required to comply with the most current and applicable Title 24 standards and California Building Code, which would help reduce energy consumption and GHG emissions. The Project would support the reduction of the urban heat island effect by exceeding City tree planting requirements and providing 286 parking lot trees, 82 perimeter interior trees, and 152 perimeter street abutting trees. The Project would provide approximately 323,744 square feet of landscaping, including perimeter landscaping and maintained landscaped areas throughout the site. The Project would also comply with the City’s water efficient landscape requirements and would provide drought tolerant landscaping and water-efficient irrigation via a drip irrigation system utilizing a Smart Controller to moderate water use. In addition, the Project would comply with the City’s solid waste reduction programs, which are designed to comply with federal, state, and local statutes and regulations related to solid waste. Therefore, the Project would be consistent with this reduction strategy.</p>

City of Brea Regulations and Policies

The City’s General Plan includes Policy PS-1.15, which highlights the importance of considering climate change vulnerability in planning decisions, including those involving new public facilities and private development. While this is a Citywide policy, the Project would not preclude implementation of such policy as the Project is undergoing the CEQA review and approval process and being analyzed for GHG emissions impacts, as detailed above. The Project would comply with the 2022 California Green Building Standards Code, which has been adopted by the City. These standards would ensure the Proposed Project would

provide sustainability features such as energy efficient appliances and lighting, a solar-ready roof, EV charging stations, EV readiness parking spaces, and low-flow water fixtures. Furthermore, the Proposed Project would include approximately 18 passenger vehicle EV charging parking spaces, 46 EV-ready parking spaces, and would include several EV-ready delivery van spaces and 4 trailer spaces. These electrical vehicle charging stations would be served by a separate electrical service and the electricity would be managed by load management software to help reduce the amount of electrical consumption associated with vehicle charging. As such, the Project would be consistent with the City's electrical vehicle parking requirements. Furthermore, the Project also offers other GHG reduction measures integrated into the Project's design, including the planting of a minimum of 399 trees onsite and provision of drought tolerant landscaping and water-efficient irrigation, which would comply with the City's water efficient landscape requirements.

Based on the above, the Project would not conflict with applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions.

3.3.3.3 Cumulative Impacts

Analysis of GHG emissions is cumulative in nature because impacts are caused by cumulative global emissions and additionally, climate change impacts related to GHG emissions do not necessarily occur in the same area as a project is located. The geographic scope for related projects considered in the cumulative impact analysis for GHG emissions is global because impacts of climate change are experienced on a global scale regardless of the location of GHG emission sources. Therefore, GHG emissions and climate change are, by definition, cumulative impacts. As discussed above, adverse environmental impacts of cumulative GHG emissions, including sea level rise, increased average temperatures, more drought years, and more large forest fires, are already occurring. As a result, cumulative impacts related to GHG emissions are significant. Thus, the issue of climate change involves an analysis of whether a Project's contribution towards an impact is cumulatively considerable. Per CEQA Guidelines Section 15064(h)(3), a project's incremental contribution to a cumulative impact would not be cumulatively considerable if the project would comply with a previously approved plan or mitigation program that provides specific requirements that would avoid or substantially lessen the cumulative problem within the geographic area of the Project.

Given that the Project would be consistent with and would not conflict with applicable reduction actions and strategies the 2022 Scoping Plan and 2020-2045 RTP/SCS, as well as with the policies and regulations set forth by the City of Brea and given that GHG emission impacts are cumulative in nature, the Project's incremental contribution to cumulatively significant GHG emissions would be less than significant. As discussed under Subsection 5.3.7, the Project would not conflict with applicable regulations or plans and would further certain GHG emission reduction initiatives in these plans as a result of the Project's GHG emission reducing features, including the incorporation of bike parking and EV charging capabilities, improved connectivity to bicycle and pedestrian pathways, and provision of a last-mile parcel delivery facility that would reduce truck travel distances. Moreover, as demonstrated above, the Project would result in a net reduction in GHG emissions from the Project Site. Therefore, the Project's contribution to impacts related to GHG emissions and climate change would not be cumulatively considerable, and, as such, the Project's cumulative impact on global climate change would be less than significant.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.7	annual days of extreme heat
Extreme Precipitation	4.90	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	3.88	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	55.4
AQ-PM	85.6
AQ-DPM	66.3
Drinking Water	78.3
Lead Risk Housing	32.6
Pesticides	80.1
Toxic Releases	87.9
Traffic	83.9
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	66.4

Haz Waste Facilities/Generators	90.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	32.0
Cardio-vascular	51.3
Low Birth Weights	28.5
Socioeconomic Factor Indicators	—
Education	21.4
Housing	6.32
Linguistic	30.0
Poverty	20.1
Unemployment	36.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	91.17156422
Employed	78.94264083
Median HI	80.21301168
Education	—
Bachelor's or higher	85.62812781

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	81.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Total site acreage is 31.6 acres.
Construction: Construction Phases	Construction schedule specified by Construction Questionnaire filled out by Applicant.
Construction: Off-Road Equipment	Construction Equipment specified by Construction Questionnaire filled out by Project Applicant.
Operations: Vehicle Data	Trip Generation data and VMT derived from the Project's VMT Report (NV5 Engineers & Consultants 2024).
Operations: Fleet Mix	Warehouse accounts for all Heavy Duty Trucks and Vans used by the Project. General Office Building Accounts for the Passenger Cars driven by employees.
Construction: Dust From Material Movement	Material export provided by the Project proponent.
Construction: Trips and VMT	Hauling trips updated to match information provided by the Project proponent.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.7	annual days of extreme heat
Extreme Precipitation	4.90	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	3.88	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	55.4
AQ-PM	85.6
AQ-DPM	66.3
Drinking Water	78.3
Lead Risk Housing	32.6
Pesticides	80.1
Toxic Releases	87.9
Traffic	83.9
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	66.4
Haz Waste Facilities/Generators	90.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	32.0
Cardio-vascular	51.3
Low Birth Weights	28.5

Socioeconomic Factor Indicators	—
Education	21.4
Housing	6.32
Linguistic	30.0
Poverty	20.1
Unemployment	36.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	91.17156422
Employed	78.94264083
Median HI	80.21301168
Education	—
Bachelor's or higher	85.62812781
High school enrollment	100
Preschool enrollment	17.18208649
Transportation	—
Auto Access	98.98626973
Active commuting	36.87925061
Social	—

Other Decision Support	—
2016 Voting	86.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	81.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

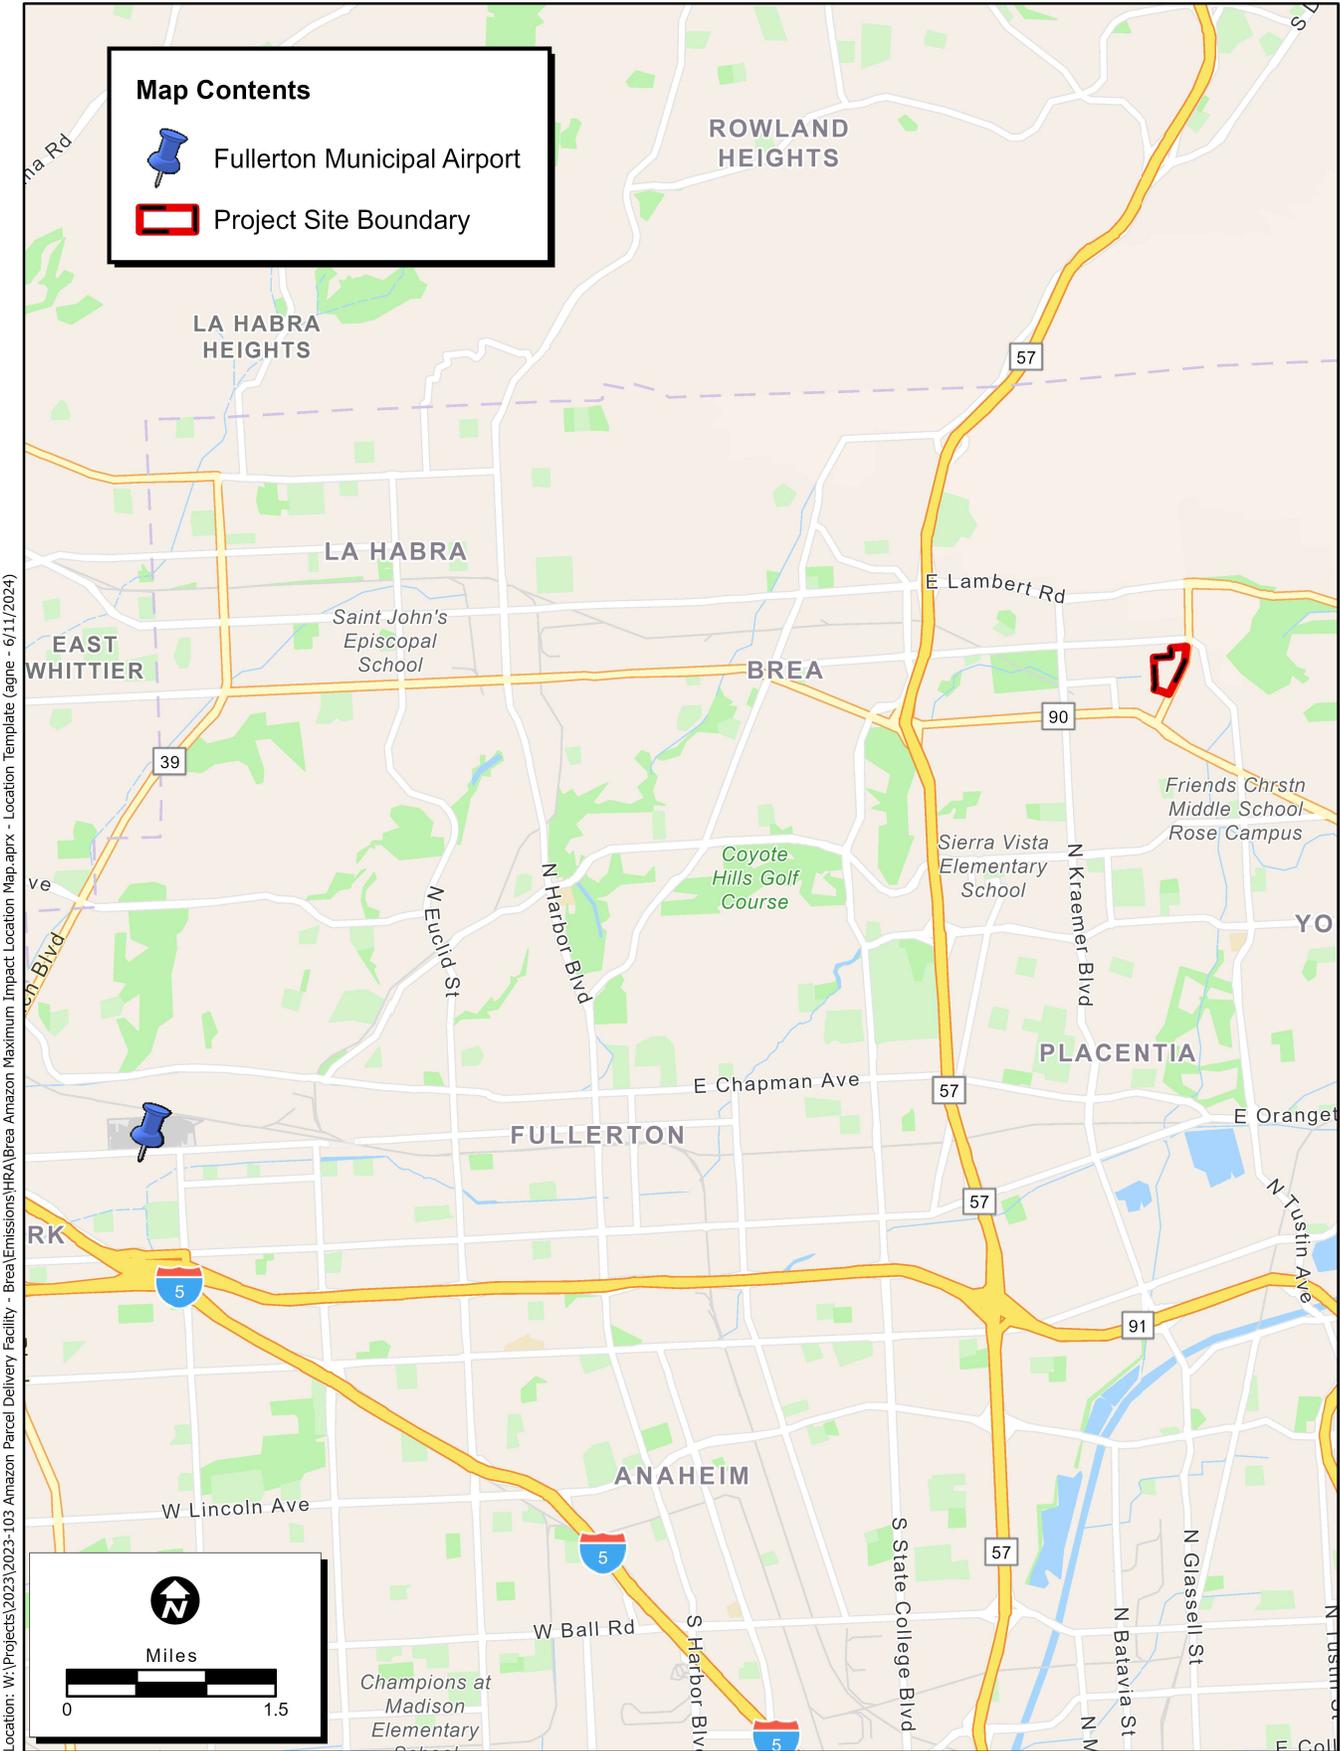

8. User Changes to Default Data

Screen	Justification
Operations: Vehicle Data	Trips and VMT update to match VMT report.
Land Use	Lot acreage adjusted to match that of the Project Site.

Notes:

- Project electricity consumptions as modeled in California Emissions Estimator Model Version 2022.1 (CalEEMod) computer model. Project fuel consumption calculated based on CalEEMod results. Countywide operational fuel consumption, off-road construction equipment diesel fuel consumption, and on-road fuel consumption are from CARB's EMFAC2021 emissions inventories.
- The project's net increase in electricity and natural gas consumption is compared to the total consumption in Orange County in 2022. The project net increases in construction off-road and on-road fuel consumption are compared with the projected Orange Countywide off-road fuel consumption and Countywide on-road fuel consumption in 2025. The project increases in operational automotive fuel consumption is compared with the projected Countywide on-road fuel consumption in 2027 (operation year).

14 June 2021

EXECUTIVE SUMMARY

This Executive Summary presents the results of the Phase I Environmental Site Assessment (ESA) performed by Geosyntec Consultants, Inc. (Geosyntec) for the property located at 275 Valencia Avenue, Brea, California 92823 (the “Site”). This Phase I ESA was prepared in accordance with the scope of work, terms and conditions described in Geosyntec’s proposal dated 9 August 2018 and Purchase Order 2D-05538053 issued on 10 May 2021. This Phase I ESA was performed in accordance with ASTM Standard E1527-13. The objective of performing this Phase I ESA was to identify, to the extent feasible, “Recognized Environmental Conditions” (RECs) at the Site as the “REC” term is defined by ASTM E1527-13.

The Site is an approximately 31.8-acre property that currently consists of two Bank of America buildings (service and operations buildings) that are owned by Cerberus California, LLC. The buildings measure approximately 673,507 square feet combined. Current operations include the Bank of America call center and administrative offices. Bank of America has occupied the Site since at least 1994. Former uses of the Site include vacant or undeveloped land until the construction of the current commercial buildings in 1981 and 1983, former tenants of the Site include a Security Pacific bank and data processing center/microfiche operations. Current uses of the vicinity include recreational areas, residential, commercial buildings, and an inactive oil field. Historical uses of the Site vicinity included an active oil field and undeveloped land.

The Site buildings were constructed in 1981 and 1983, and as such, Geosyntec presumes that asbestos-containing material (ACM) may be present in building materials; however, lead-based paint (LBP) is not likely to be present in building materials at the Site. In addition, no water damage or mold issues were identified during preparation of this Phase I ESA.

The Phase I ESA performed by Geosyntec has revealed the following conditions as defined by ASTM:

Recognized Environmental Conditions (RECs)

- **Abandoned On-Site Underground Storage Tank (UST):** Historical reports identified an abandoned 4,000-gallon tank which was installed on-Site to act as secondary containment in case of a release from a former power transformer. Southern California Edison (SCE) reportedly owned the transformer and was responsible for any releases. The UST was reportedly never used and was abandoned in place in 1999; however, no subsurface sampling was conducted around the UST or former transformer prior to or after abandonment. The presence of an abandoned UST without sampling or regulatory concurrence represents a REC.

Historical Recognized Environmental Conditions (HRECs)

- **Historical On-Site Clarifier and USTs:** Historical reports identified two former 48,000-gallon diesel USTs which were installed on-Site to power backup generators in case of

power failure, and an abandoned clarifier which was installed for management of the liquid waste stream related to the prior on-Site developing of microfiche. Petroleum products or other chemicals may have been associated with the development of microfiche and may have impacted the subsurface at the Site in the event of a release associated with the clarifier. Additionally, a 47-gallon release was reported from one of the 48,000-gallon USTs in 1995, and both 48,000-gallon USTs were removed later that year. Soil investigations and remedial actions were implemented to address residual hydrocarbon impacts to the soil. During these investigations, total petroleum hydrocarbon (TPH) impacts to soil were encountered that were previously unknown and reportedly unrelated to the identified release, indicating other unknown releases could have also occurred elsewhere. Soil was reportedly excavated upon the identification of additional contamination. Subsurface sampling near the clarifier in 1994 did not report significant levels of volatile organic compounds (VOCs) or metals in soil or groundwater. The clarifier was abandoned in place. A no further action (NFA) determination was issued for the property in 1995 by County of Orange Health Care Agency; therefore, the presence of the former USTs and the abandoned clarifier at the Site represents an HREC.

De Minimis Conditions

- **Surface Staining in Elevator Equipment Rooms:** During Site reconnaissance, pools of hydraulic fluid were observed in and around elevator equipment at the Site. Generally, the hydraulic fluid was contained within the equipment's secondary containment; however, staining of the concrete flooring was locally observed surrounding some of the equipment. The concrete flooring in the vicinity of the hydraulic fluid was observed to be intact and in good condition, therefore the surface staining is classified as a *de minimis* condition.
- **Southern California Edison Transformer Room:** During the Site reconnaissance a transformer room was identified on-Site which contains transformers and transformer equipment as reported by Armando Flores of Bank of America. Geosyntec was unable to access the transformer room. SCE reportedly owns and maintains the transformer equipment within the transformer room. While the transformer room could not be observed, there were no records or reports of releases and the condition of the building floor throughout the remainder of the building generally appeared to be competent with no cracks in the areas observed. In the absence of additional information indicating a release has occurred, Geosyntec considers this finding to represent a *de minimis* condition.

Following investigation, it appears that "data gaps" as defined by ASTM exist for the Site. However, in Geosyntec's opinion, none are considered to be significant with respect to identification of additional RECs for the Site.

Additionally, the Client authorized Geosyntec to address methane as a Non-Scope Consideration task in this Phase I ESA. The Site is located adjacent to the south of the Brea-Olinda Oil Field, an active oil field that has operated many oil and gas wells since the 1800s. Seven wells are located

within approximately 300 to 400 feet to the north, northeast and/or east of the Site, including idle and plugged wells. Orange County may have restrictions on the construction of new buildings in proximity to active or inactive oil well, unless the well has been assessed to ensure proper abandonment, and the CalGEM updated its well abandonment criteria in 2010. There are no known abandoned, inactive, or active oil wells on the Site. Although methane is not a CERCLA-regulated hazardous substance as defined in ASTM 1527-13, methane may pose an explosive risk. The presence of former oil wells in the Site vicinity and the potential for elevated methane in the subsurface present a Business Environmental Risk.

1. INTRODUCTION

Geosyntec Consultants, Inc. (Geosyntec) was retained on behalf of Amazon.com Services LLC (Amazon or the Client) to perform a Phase I Environmental Site Assessment (ESA) for the property located at 275 Valencia Avenue, Brea, California 92823 (the “Site”). Geosyntec understands that Amazon intends to purchase this Site (Amazon Site Code DJT4). The Site location, a recent layout, and Site vicinity are provided on the appended Figures.

1.1 Purpose

This Phase I ESA was conducted in general accordance with the scope and limitations of the guidance contained within the ASTM International (ASTM) Practice E1527-13. Deviations or exceptions to the guidance contained in the ASTM E1527-13 standard of practice are described in Section 1.4. The intent of Geosyntec’s effort is to provide the User with a Phase I ESA that includes a search for the existence of potential or known surface or subsurface environmental impacts at the Site. For the purposes of this Phase I ESA report, Amazon represents the “User,” defined as “the party seeking to use Practice E1527-13 to complete an environmental site assessment of the property...”

The Phase I ESA was conducted to identify, to the extent feasible, “Recognized Environmental Conditions¹” (RECs) at the Site, as the “REC” term is defined by ASTM E1527-13. This REC definition eliminates from consideration a number of conditions that could fall under the general definition of “environmental” issues and focuses the Phase I ESA on known or potential releases of hazardous substances and petroleum products that Geosyntec believes could have impacted the soil, groundwater, and/or soil vapor at the Site. Such conditions include radon, wetlands, etc.; unless in the case where these out of scope items are specifically included in the Client’s scope of work (see Section 8).

1.2 Scope of Services

Geosyntec was authorized by Tracey Schwartz on behalf of Amazon to conduct the scope of work specified in Geosyntec’s 9 August 2018 proposal and authorized under Amazon Purchase Order 2D-05538053 issued on 10 May 2021. The Phase I ESA scope of work included: (i) review of pertinent information/documents provided by Amazon; (ii) review of environmental databases for the Site and in the vicinity of the Site pursuant to the ASTM E1527-13 Standard; (iii) review of historical land usage via historical aerial photographs, fire insurance maps, city directories, and U.S. Geological Survey (USGS) topographic maps, and past reports on the Site, as available; (iv) a

¹ As defined by ASTM E1527-13, a Recognized Environmental Condition is: “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

Site visit to perform a visual reconnaissance of the major Site features; and (v) a report. In addition, as non-scope items, Geosyntec also reviewed the building/structure age (if present), and if available, historical information regarding lead-based paint (LBP), asbestos-containing materials (ACM), methane, and water and mold. These non-scope items are discussed in Section 8.

This Phase I ESA was conducted under the supervision of Wendy Key, a Client Program Manager, who is an “Environmental Professional” (as defined under the ASTM Practice E1527-13). Under their direction and oversight, the Site visit was conducted on 4 June 2021 by Josh Nandi of Geosyntec and the report was drafted by Lucas Henry and Madeline Ferry and peer reviewed by Paige Farrell. This report was senior reviewed by Gib Fates and Kimberly Brandt who are also Environmental Professionals. The professional qualifications of the individuals above are presented in Appendix F.

1.3 Significant Assumptions

Except as may be noted in Geosyntec’s proposal, no significant assumptions were taken into account by Geosyntec as part of this project.

1.4 Limitations, Deviations, and Exceptions

This Phase I ESA was performed according to the agreed upon scope of work with Amazon consistent with the ASTM Practice E1527-13, except as follows:

- Due to time limitations on preparing the Phase I ESA, review of agency files pertaining to the Site and surrounding properties was limited to online resources only.
- Geosyntec did not enter the transformer room on-Site due to access restrictions in place by Southern California Edison (SCE). SCE owns and maintains the transformers and equipment in the transformer room.

This Phase I ESA contains a property description and history, an environmental database review, a summary of visual observations made during the Site reconnaissance, and descriptions of information obtained during interview(s) of person(s) knowledgeable with the Site. The findings and conclusions presented in this Phase I ESA are the result of professional interpretation of the information collected at the time of this study. The Phase I ESA does not necessarily include an exhaustive search of all available records nor does it include detailed assessment of all Phase I ESA findings. Therefore, Geosyntec cannot “certify” or guarantee that any property is free of environmental impairment; no warranties regarding the environmental quality of the property are expressed or implied.

1.5 Special Terms and Conditions

Except as may be noted in Geosyntec’s proposal, no special contractual terms or conditions were taken into account as part of this project.

1.6 User Reliance

This Phase I ESA report has been prepared solely for the benefit of Geosyntec's Client, Amazon.com Services LLC and its subsidiaries and affiliated entities. Geosyntec has issued the Phase I ESA report to Amazon, and grants the right to Amazon.com Services LLC, and its subsidiaries and affiliated entities to rely on the report contents. Except as specifically set forth in Geosyntec's proposal to Client to perform this work, no other party shall have the right to rely on Geosyntec's opinions rendered in connection with the Services without Geosyntec's written consent which may be conditioned on the third party's agreement to be bound to acceptable conditions and limitations similar to this Agreement. Please note that Geosyntec's consent to provide a right-to-rely on this report is subject to Client's approval and to agreement to Geosyntec's terms and conditions associated with Geosyntec's performance of this specific scope of work.

2. SITE DESCRIPTION

This section provides a description of the key characteristics of the Site. This description is derived from information provided by the Client and information gathered during the reconnaissance unless referenced otherwise.

2.1 Site Location and General Characteristics

The Site is an approximately 31.8-acre property, composed of three parcels (Orange County Parcel Numbers 320-301-11, 320-301-12, and 320-233-17) located on the west side of Valencia Avenue in Brea, California. The Site is currently owned by Cerberus California, LLC, a division of Cerberus Capital Management. General vicinity use consists of commercial and residential properties. The Site location and layout are shown in the Figures. A legal description of the Site was not provided to Geosyntec. Current tax parcel/map information is provided in Appendix C.

2.2 Current and Former Uses of the Site

The Site currently consists of two commercial buildings and is occupied by Bank of America. The Site consists of one three-story building identified as the operations building, and one three-story building identified as the service building. The buildings measures approximately 673,507 square feet combined. Current operations include the Bank of America call center and administrative offices. Former uses of the Site include vacant or undeveloped land until the construction of the current commercial buildings in 1981 and 1983, former tenants of the Site include a Security Pacific bank and data processing center/microfiche operations.

Current uses of the vicinity include recreational areas, residential, commercial buildings, and an inactive oil field. Historical uses of the Site vicinity included an active oil field and undeveloped land.

2.3 Current Use of Adjoining and Nearby Notable Properties

The vicinity is currently a mix of commercial and residential properties. Current uses are summarized below:

- North – Myles Rice Co. (3300 East Birch Street) and Professional Tutors of America (3350 East Birch Street);
- East – Valencia Avenue followed by residences;
- South – Nasa Street followed by Suzuki Motor of America, Inc. (offices at 3251 East Imperial Highway);
- West – Surveyor Avenue followed by Orora Manufacturing Packaging Products (3200 Enterprise Street); and
- Northwest – intersection of Surveyor Avenue and Enterprise Street followed by Shambaugh & Son Fire Protection (3233 Enterprise Street).

2.4 Physical Setting

2.4.1 Topography and Geology

The Site is depicted on the USGS 7.5-minute quadrangle map, Anaheim, California. Geosyntec obtained a physical setting report for the area of the Site from Environmental Risk Information Services (ERIS). According to the ERIS report (Appendix E), the Site has an elevation of approximately 419 feet above mean sea level with a decreasing topographic gradient to the east-southeast. The ERIS report identified Site soils largely as Myford sandy loam. According to geologic information provided in the ERIS report, the Site vicinity is underlain by Quaternary alluvium and marine deposits of Pliocene to Holocene age.

2.4.2 Hydrology

According to the USGS quadrangle map, Anaheim Union Canal and Anaheim Union Reservoir are located approximately 1.5 miles southwest of the Site. The Carbon Canyon Canal is also located approximately 0.5 miles southeast of the Site. According to the US Fish and Wildlife Service, there are no wetlands or water features present on the Site. The Site is located in an area of minimal flood hazard as indicated on the Federal Emergency Management Agency Flood Insurance Rate Map for the Site.

In general, groundwater flow direction may vary depending on area groundwater pumping, surface water bodies, land use and development, localized topography, and other macro and micro features. According to the Orange County Water District (OCWD) 2019 Groundwater Elevation

Contours for the Principal Aquifer, the groundwater flow is south/southwest (Appendix C).² According to the Beckman Instruments *Case Summary and No Further Action* report from 1990 by County of Orange Environmental Health Division, depth to groundwater is approximately 145 feet below ground surface (bgs) (OCWD 1990, Appendix D). The Beckman Instruments cleanup property is located on the northern adjoining property.

ERIS conducted a search of federal and state water well databases within one mile of the Site. There were no wells identified on the Site, although there were 660 well entries listed in the vicinity. The majority of these entries were associated with oil and gas wells in the vicinity. The vicinity was formerly identified as the Brea-Olinda Oil Field. Seven former oil/gas wells are located on the northern and northeastern adjoining properties. No information regarding violations to drinking water were reported by ERIS.

3. USER-PROVIDED INFORMATION

This section describes the information provided to Geosyntec by Amazon (the User of this Phase I ESA). Per ASTM E1527-13, a User Questionnaire was provided to the User to inquire about specialized information related to the Site. To date, a completed questionnaire has not been provided to Geosyntec; the User indicated that they have no specialized knowledge of environmental conditions on the Site beyond that described in Section 3.3 below.

3.1 Title Records

Geosyntec was not provided with and did not review title records for the Site. A property title search was not included in the scope of Geosyntec's services.

3.2 Environmental Liens or Activity and Use Limitations

The User did not provide Geosyntec with records for liens or activity and use limitations for the Site.

3.3 Specialized Knowledge

The User did not indicate it had specialized knowledge of environmental conditions on the Site.

3.4 Commonly Known or Reasonably Ascertainable Information

The User did not indicate it had commonly known or reasonably ascertainable information (as defined in AAI) regarding the Site.

² <https://www.ocwd.com/what-we-do/groundwater-management/groundwater-location-maps/>

3.5 Valuation Reduction for Environmental Issues

The User has not informed Geosyntec regarding whether or not the valuation of the Site has been reduced or otherwise impacted by environmental issues (as defined in AAI) at the Site.

3.6 Owner, Property Manager, and Occupant Information

For this Phase I ESA, the User supplied Geosyntec with the following contact for the Site: Tyler Rothenberg of Cerberus California, LLC (owner representative). Mr. Rothenberg referred Geosyntec to Armando Flores of Bank of America, who provided access to the Site.

3.7 Reason for Performing This Phase I ESA

Geosyntec understands that the Client engaged Geosyntec to perform this Phase I ESA for the Site to identify “Recognized Environmental Conditions” (as defined in ASTM E1527-13) and potential environmental liabilities associated with the Site in preparation for purchasing the Site.

3.8 Additional Information

The User provided documentation of the Site boundary. A copy is included in Appendix B.

4. RECORDS REVIEW

Geosyntec’s records review consisted of the following, to the extent available and reasonably ascertainable within the timeframe of the report preparation: i) review of identified federal, state, and local environmental databases; ii) review of historical aerial photographs; iii) review of historical topographic maps; iv) review of city directories; v) review of select public and Client/owner-provided records related to environmental matters; and vi) review of available property tax information.

4.1 Environmental Database Search

4.1.1 Overview

Geosyntec contracted with ERIS to provide portions of the records reviewed as described below. The environmental database search was performed by ERIS in an attempt to ascertain whether the Site or neighboring properties were suspected of having environmental conditions that could have impacted the surface or subsurface at the Site. Specific records and search distances (from the approximate Site boundaries) for the environmental databases were reported by ERIS to be consistent with ASTM Practice E1527-13 and are discussed in the ERIS Database Report (presented in Appendix E). Database descriptions are also included in the ERIS report. Relevant results for the Site and vicinity are discussed in the following sections.

4.1.2 Results – Site

Bank of America – Brea Branch was listed at 275 Valencia Ave in the following databases: Alternative Fueling Station (ALT FUELS), Above Ground Storage Tanks (AST), SWRCB Historical Aboveground Storage Tanks (AST SWRCB), California Environmental Report System Tanks (CERS TANKS), Delisted Environmental Report System (CERS), Hazardous Waste Sites (DELISTED HAZ), Delisted Tank (DELISTED TNK), Historical Hazardous Substance Storage Information Database (HHSS), Historical Hazardous Waste Manifest Data (HIST MANIFEST), Facility Registry Service/Facility Index (FINDS/FRS), Hazardous Waste Manifest Data (HAZNET), Historical Hazardous Substances Storage Container Information – Facility Summary (HIST TANK), Leaking Underground Fuel Tank Reports (LUST), Orange County – Aboveground Petroleum Storage Tank Listing (ORANGE AST), Orange County Hazardous Waste Facilities (ORANGE HW), Toxic Pollutant Emissions Facilities (EMISSIONS), Resource Conservation and Recovery Act non-generators (RCRA NON GEN), RCRA Small Quantity Generator List (RCRA SQG), and Statewide Environmental Evaluation and Planning System (UST SWEEPS).

- According to the LUST listing, a prior LUST was reported in connection with the Site in 1995 and was later removed that same year. A remedial action involving soil excavation was also completed. No confirmatory sampling or details on which tank was removed was available through the online entry in GeoTracker.
- According to the HHSS listing, four tanks were listed in connection with the Site in 1988. These included a 1,500-gallon diesel fuel tank (this tank maybe an AST associated with a backup generator), a 4,000-gallon waste oil tank, and two 48,000-gallon gasoline tanks. The tanks were installed in 1984. The listing did not specify if these tanks were aboveground storage tanks (ASTs) or underground storage tanks (USTs); however, prior reports identified these tanks as USTs with leak detection sensors; however, no documentation was provided. The former USTs are further discussed in Section 4.5.
- According to the HAZNET and HIST MANIFEST entries Bank of America and the previous tenant, Security Pacific Bank, generated small volumes of hazardous waste each year with manifests provided between 1983 and 2015. There were various hazardous wastes generated including, alkaline solutions, laboratory waste chemicals, waste oil, off-specification, aged, or surplus inorganic and organic chemicals, and photograph chemical and processing waste.
- According to the three EMISSIONS entries, an inventory of toxic and pollutant air emissions was reported for the facility between 1993 and 2013. It tracked a variety of pollutants including total organic gases, reactive organic gases, carbon monoxide, nitrogen oxides, sulfur oxides, particulate matter, and fine particulate matter (<10 microns). The mass of emissions appears to have decreased over time.
- According to the CERS TANK listing, regular inspections of the aboveground storage tanks (ASTs) and a survey of hazardous materials stored on-Site has been recorded in this database since 2014. There was minor noncompliance reported such as failure to conduct a spill prevention meeting and training credentials for an on-Site worker. The most notable entry was observations of leaking pipes which connected two ASTs (1,000-gallon diesel

AST and 15,000-gallon diesel AST) that occurred for numerous months during 2020. The facility had reportedly returned to compliance in July 2020. Geosyntec did not observe the ASTs to be leaking during Site reconnaissance.

- According to the two RCRA NON GEN listings, as of January 2021 there were no compliance monitoring or enforcement records associated with the facility. According to RCRA SQG, the Security Pacific Bank and data processing center was formerly listed as a small quantity generator (SQG) and large quantity generator (LQG). There were no violations associated with the prior tenant.
- According to AST SWRCB and AST, there was a 3,050-gallon diesel AST on-Site in 2003 and 1,320-gallon AST (contents not specified) on-Site in 2005.
- According to the DELISTED TNK entry, there was a/are former UST(s) that was/were present on the Site and delisted in 2017. The entry did not specify which UST(s) was/were being delisted.

4.1.3 Results – Vicinity Sites

ERIS identified 35 sites (located within 1/8-mile, projected to be upgradient of the Site, or of high interest), in databases potentially indicative of release (e.g., leaking underground storage tanks, cleanup sites) or in a database indicative of solid waste disposal (SWF/LF) or land use concerns (e.g., historical military sites). Of these, the following were considered to have at least a moderate potential to have impacted the soil, groundwater, and/or soil vapor at the Site:

- Pepper Tree Corridor at 3202 Valencia Ave (southeastern adjoining property, hydraulically downgradient) and listed on Orange County – Industrial Cleanup Program Case Listings (ORANGE ICP) database. Listed as a closed cleanup site involving waste oil.
- [Orora] Manufacturing Packaging Products at 3200 Enterprise St. (western adjoining property hydraulically cross-gradient) and listed on CERS HAZ, Orange HW, RCRA SQG, and FINDS/FRS databases. Listings in the CERS HAZ describe the facility as a chemical storage facility and a hazardous waste generator. A number of violations were reported, including issues with employee training, improper labeling, and submitted waste inventories. The RCRA SQG entry listed waste oil, ignitable waste, corrosive waste, and mercury as some of the different hazardous waste classes produced by the facility. This adjoining property was listed as a SQG with no compliance and violation records associated with the facility as of January 2021.
- Weber Aircraft Inc. was also listed at 3200 Enterprise St. (western adjoining property hydraulically cross-gradient) on RCRA SQG and the EMISSIONS databases. The RCRA SQG entry listed Weber as generating spent halogenated solvent used in degreasing, corrosive waste, and ignitable waste in 1990. Emissions were tracked by the South Coast Air Quality Management District (SCAQMD) in 1987 and 1990.
- Blaisdell Manufacturing was also listed at 3200 Enterprise St. (western adjoining property hydraulically cross-gradient) on the RCRA NON GEN and EMISSIONS databases. There

are emissions data for the facility in 1987 which indicates the facility emitted toxins into the air under regulatory oversight by the SCAQMD.

- Shambaugh & Son LP and Allan Automatic Sprinkler were listed at 3233 Enterprise St. (northwestern adjoining property, hydraulically upgradient) on the CERS HAZ, ORANGE HW, RCRA NON GEN, ORANGE LOP, LUST, and UST SWEEPS databases. A LUST was formerly present on the adjoining property and closed in 1995, further details are provided in Section 4.4.2. This property was listed as an active facility in the UST SWEEPS database entry, but the number of tanks was not specified.
- Beckman Instruments was listed at 3300 Birch St. (north adjoining property, hydraulically upgradient) on EMISSIONS, FINDS/FRS, and LUST databases. There are emissions information for 1990 and 1993 which indicates the facility emitted toxins into the air under regulatory oversight by the SCAQMD. A description of the LUST listing is discussed in Section 4.4.2.
- Pacific Skylight, Harbor Truck Bodies, and Munters Corp at 255 Voyager Avenue (located approximately 550 feet to the northwest, hydraulically cross-gradient) are listed on the EMISSIONS, FINDS/FRS, ICIS, CERS HAZ, ORANGE LOP, RCRA LQG, RCRA NONGEN, and LUST databases. According to the listings, operations at the Harbor Truck Bodies facility included motor vehicle body manufacturing. The ICIS database identified two notices of violation that were reported as administrative in nature for this facility. The facility was regulated by the SCAQMD between 1987 and 2018. Pacific Skylight was identified by the ORANGE LOP and LUST databases for a closure certification issued in 1991 in association with a gasoline release to soil. The leaking UST was closed and removed. No further information pertaining to the quantity or location of release was provided by the databases.
- Cyanamid Distribution Center Brea at 2980 Enterprise Street (located approximately 0.3 mile to the west, hydraulically cross-gradient) is listed on the CERCLIS, SEMS ARCHIVE, and CERCLIS NFRAP databases. According to the listings, a release was discovered at the facility in 1980; however, no further information regarding the type or quantity of release was reported. The listing was archived in 1987.

These sites are further discussed in Section 4.4.2.

4.1.4 Unplottable Sites

ERIS identified 15 “unplottable sites” which could not be mapped by ERIS due to the lack of sufficient address information. Geosyntec attempted to identify the relative location of these sites. Based on information reviewed, in Geosyntec’s opinion, these listings are unlikely to have impacted the Site.

4.2 Historical Use Information

Geosyntec contracted ERIS to provide standard historical records, including aerial photographs, topographic maps, fire insurance maps, and city directories. The following documents were provided to Geosyntec for review and are included in Appendix E:

- Historical aerial photographs – 1928, 1939, 1947, 1960, 1972, 1975, 1988, 1995, 2002, 2005, 2009, 2010, 2012, 2014, 2016, 2018, 2020;
- Historical topographic maps – 1896, 1898, 1901, 1925, 1928, 1942, 1949, 1950, 1964, 1972, 1981, 2015;
- Fire insurance maps – Requested, but no coverage was identified by ERIS; and
- City directories – 1955, 1959, 1964, 1971, 1975, 1980, 1987, 1991, 1996, 2001, 2004, 2008, 2012, 2016, 2020.

Additional satellite imagery was reviewed using Google Earth for the following years: 1985.

A summary of the findings from the review of the historical sources is provided in Table 1 and is summarized below:

- Site – Based on aerial photograph and topographic map review, the Site was undeveloped until sometime between approximately 1981 and 1985. The Site appears as undeveloped or vacant land on aerial photographs through 1947. Between 1928 and 1981, there appear to be a few small streams, drainage ditches, or canals crossing through the Site. Distinct constructed linear features, are observed crossing the Site in roughly east-west and northwest-southeast orientations on aerial photographs between 1953 and 1972, and may represent a canal or drainage channel (east-west alignment) and a buried utility line or oil pipeline (northwest-southeast alignment). By 1975, the Site and adjoining areas to the north, south, and west appeared cleared in preparation for development. By at least 1985, the Site was developed with commercial buildings and associated parking lots that appear similar to the current Site layout. From 1988 to the present, there have not been any significant changes to the Site. From at least 1994 through 2020, the Site has been occupied by Bank of America according to city directory listings.
- Surrounding vicinity – Based on topographic map and aerial photograph review, from 1896 to 1939, the vicinity and adjoining properties were vacant land. In 1939, the Brea-Olinda Oil Fields are visible in the northern and northeastern vicinity, approximately 0.2 miles north-northwest of the Site. Oil field operations are visible in these areas through 2020. Between 1942 and 1988, agricultural orchards are present in the vicinity of the Site to the north, east, and south. The size of these orchards fluctuates during this time. In 1953, the southeastern adjoining property is developed into a collection of commercial or industrial structures. Development on this property expanded through time into at least 2005 and

appears to have tanks present. In 1988, there is significant development of the adjoining and vicinity properties, with likely commercial or industrial structures being constructed on all adjoining properties except for a portion of the eastern adjoining property. In 2009, the eastern and southeastern adjoining properties have been completely cleared and beginning in 2014 the construction of residential housing is visible. By 2018, the eastern and southeastern adjoining properties have been covered with residential housing. By 2005, it appears the oil fields in the northern vicinity have been cleared and redevelopment has begun for an apparent school.

According to the city directories provided, there are no listings on Valencia Avenue, Surveyor Avenue or Nasa Street until 2001. Starting in 1987, there are commercial listings along East Birch Street, including a Truck Fabrication business located at 3200 East Birch Street with additional residential listings. In 2001 and 2004, there are commercial listings on Valencia Avenue and East Birch Street including Unocal Corporation (a division of Union Oil) listed at 376 Valencia Avenue. Central Sprinkler Co was listed at 3170 Nasa Street in 2004. Additional commercial/industrial listings are listed between 2008 and 2020. In 2016 and 2020, the Orange County Landfill and Recycling (also known as the Olinda Landfill) is listed at 1942 Valencia Avenue.

In summary, the review of aerial photographs, topographic maps, and city directories revealed usages (agriculture [orchards], commercial/industrial, and oil extraction) that could be indicative of hazardous materials/chemical storage, management/usage, or disposal at the Site or in the immediate vicinity that could pose a threat to the soil, groundwater, and/or soil vapor quality at the Site. However, in this review, Geosyntec noted no definitive features showing chemical management, chemical spills or evidence of waste disposal on or into the ground at the Site.

4.3 Property Tax Records

Geosyntec searched online Orange County real estate data to obtain records associated with the Site. Documents obtained did not indicate current or former Site owners. The retrieved tax map parcel information is provided as Appendix C to this report.

4.4 Local, County, State, and Federal Files

Geosyntec searched local, county, state, and federal agencies' online databases to search for records regarding the Site. Relevant information is summarized below.

4.4.1 Local and County Records

City and Orange County (Orange County Health Care Agency [OCHCA]³ and Orange County Fire Authority⁴) environmental records such as hazardous materials, well and UST permitting, and septic records are not readily available online.

4.4.2 State Records

Geosyntec searched the following California database websites for septic/well/hazardous materials/UST/AST records were available for online search. Relevant information regarding the Site is described below:

- California Department of Toxic Substances Control (DTSC) EnviroStor⁵ - No cases were mapped on, adjoining, or upgradient of the Site that may have impacted the Site.
- State Water Resources Control Board (SWRCB) GeoTracker⁶ - There was one LUST associated with the Site, which was incorrectly located on another property. A release from a UST was reported in 1995 and the UST was removed later that same year. Impacted soil was excavated and disposed offsite. No confirmation sampling information, analytical data, or details for UST removal were available through the online entry in GeoTracker; however, this listing is likely associated with the 48,000-gallon LUST case and UST removal that is further discussed in Section 4.5.

There were two closed LUST listings on the adjoining properties. The Beckman Instruments case (northern adjoining property) was closed as of September 1990 following the removal of two 12,000-gallon diesel tanks in 1985. Reportedly 300 to 500 gallons of diesel spilled during tank removal and the diesel-impacted soil was excavated to a depth of 24 feet bgs between 1985 and 1990. Nine soil borings were drilled to evaluate the extent of contamination and determined that the depth of soil impacts extended to 45 feet bgs (approximately 100 feet above groundwater). At the Allan Automatic Sprinkler case (northwestern adjoining property) a LUST was discovered and removed in 1995. Soil vapor extraction (SVE) was implemented at the property between January and August 2001 and the case was closed in December 2001. No other documentation was available.

There were three other LUST cases mapped in the vicinity of the Site; however, based on the closed nature of these cases, locations (down or cross-gradient), and distance from the Site, it is unlikely these LUSTs have adversely impacted the Site.

⁴ <https://www.ocfa.org/IWantTo/IWantTo.aspx>

⁵ <https://www.envirostor.dtsc.ca.gov/public/>

⁶ <https://geotracker.waterboards.ca.gov/>

- DTSC Hazardous Waste Tracking System (HWTS)⁷ – Four inactive temporary waste handlers were reported in the northern vicinity of the Site. There were entries for small volumes of waste oil and unspecified organic liquid. None of these entries are likely to have impacted the Site.
- SCAQMD FIND Map⁸ -There was an SCAQMD entry associated with the Site. Three notices of violations between 2000 and 2014 which involved failures to submit emission reports for monitoring periods were recorded in this time span. There were eight notices to comply between 2000 and 2012 for missing emission calculations and formatting for the submittals. Numerous pieces of equipment were listed for the Site, including a 50 to 500-gallon diesel emergency backup generator (application date 2015), a Charbroiler – Natural Gas generator (application date 1997), and an emergency Gas Turbine (application date 1997). These equipment pieces were listed as active. Emissions data for the facility were provided for years 2000 through 2020.
- National Pipeline Mapping System (NPMS) – A natural gas pipeline operated by Southern California Gas Company was identified on-Site and is listed as active.⁹ No releases were reported.
- CalGEM WellFinder¹⁰ - No wells were identified on-Site; however, three idle oil or gas wells on the adjoining properties north of the Site and another four plugged oil or gas wells on the western adjoining residential properties. From at least 1939 through present day the northwestern vicinity of the Site was associated with the Brea-Olinda Oil Field. Reportedly, the oil and gas wells are no longer active.

4.4.3 Federal Records

Review of the United States Environmental Protection Agency (USEPA) Enforcement and Compliance History Online (ECHO)¹¹ database revealed one record associated with Bank of America regulated by RCRA dating back to 1994. No violations were reported. This database is used to track compliance, releases, and other information for facilities handling hazardous materials.

Review of the USEPA National Priorities List (NPL)¹² database did not reveal records in connection with the Site or vicinity properties. This database lists sites of national priority among

the known releases or threatened releases of hazardous substances, pollutants, or contaminants throughout the United States and its territories.

Review of the Air Force Civil Engineer Center website¹³ and Base Realignment and Closures Sites website¹⁴ did not reveal any military sites in the vicinity of the Site.

4.5 Client- or Owner-Provided Environmental Assessment Documents

Documentation was provided to Geosyntec by Tyler Rothenberg, Managing Director for Cerberus California. A discussion of pertinent documentation is provided below, and copies are included in Appendix D.

Phase I Environmental Site Assessment Report for 275 Valencia Avenue by Partner (14 October 2014)

The Partner Phase I ESA was completed for the same project boundaries as this report. At the time that the report was completed, the property was occupied by Bank of America. The Site consisted of a parking lot and two buildings, the main call center building and an operations building, consistent with present day. The report mentioned that the property appeared undeveloped as early as 1938 and was first occupied by a Security Pacific Bank and data processing center prior to being occupied by Bank of America.

Partner's Phase I ESA included a Phase II Investigation report prepared by SECOR International Incorporated (SECOR) that was conducted to assess soil conditions surrounding two 48,000-gallon diesel USTs and the clarifier connected to the former micrographic operation was conducted by SECOR in 1994. The results of the investigation indicated that total petroleum hydrocarbons as diesel (TPHd) was detected at maximum concentration of 9,300 milligrams per kilogram (mg/kg) around the USTs. Soil and groundwater samples collected near the clarifier reported no metals or VOCs above respective Human Health Risk Assessment (HHRA) Note 3 DTSC-modified Screening Levels¹⁵ or USEPA Regional Screening Levels¹⁶ for residential soil and groundwater.

Based on the results of the Phase II investigation, the 48,000-gallon USTs and associated piping were excavated and removed by SECOR in 1995. TPHd impacted soil was excavated and removed from the UST pit. Following soil excavation, confirmation soil sampling was performed and no detectable concentrations of TPHd and benzene, toluene, ethylbenzene and xylenes (BTEX) were detected. The excavations were backfilled to grade. No groundwater was encountered during any of the excavation efforts.

¹³ <https://ar.afceec-cloud.af.mil/Search.aspx>

¹⁴ <https://www.epa.gov/fedfac/base-realignment-and-closure-brac-sites-state>

¹⁵ <https://dtsc.ca.gov/wp-content/uploads/sites/31/2019/04/HHRA-Note-3-June-2020-A.pdf>

¹⁶ <https://semspub.epa.gov/work/HQ/400431.pdf>

Partner did not identify any RECs or CRECs but did identify three HRECs and one business environmental risk (BER) which are summarized below:

- Two former 48,000-gallon diesel USTs associated with backup power generators were removed in February 1995 and soil excavation was implemented to address hydrocarbon impacts to the soil. Post-excavation confirmation soil samples were collected and analyzed for TPH and BTEX. Neither TPH nor BTEX was reported in the confirmation samples. A no further action (NFA) determination was issued OCHCA in September 1995.
- A 4,000-gallon UST, located adjacent to the main building, was reportedly connected to a power transformer and was intended for use as secondary containment in the event of a release from the transformer. Partner interviewed Mr. Eddie Cordero, the building engineer, and reported that the UST was never used and was abandoned in-place in 1999.
- A clarifier, associated with the former micrographic operation, is located on-Site. The micrographic operation produced microfiches and may have involved the use of petroleum products or other chemicals in the production process. The clarifier is connected to a floor drain where these operations occurred. The date of clarifier installation and period of use were not reported. As reported by Partner, Mr. Cordero indicated that the floor drain was filled with concrete and covered in 1994 and the clarifier was backfilled.

Partner identified ACMs as a potential business environmental risk. Based on the age of the buildings on-Site, potential ACMs were identified; however, the suspect ACMs were observed to be in good condition and determined to not pose a threat to human health. Partner concluded the report by recommending that an ACM abatement program be implemented in the case that any future building renovations were performed.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

A reconnaissance of the Site was conducted by Geosyntec representative Joshua Nandi on 4 June 2021 who was escorted by Armando Flores with Bank of America. Photographs taken during the reconnaissance are included in Appendix A. Adjoining properties were peripherally observed from the perimeter of the Site.

As part of the Site reconnaissance, Geosyntec looked for evidence of the presence of hazardous substances used, stored, or discarded, and inspected the Site for areas of disturbed or discolored soil, suspect equipment and/or building materials which may contain hazardous substances, areas of distressed vegetation, wastewater discharge areas, storage tanks/septic systems, waste management/disposal areas, lagoons, pits, sumps, surface water management areas, and stained surfaces.

5.2 Utility Service & Materials Management Provider Information

At the time of the Site reconnaissance, electricity was provided by SCE, natural gas was provided by Southern California Gas Company, potable water and sewer services were provided by the City of Brea, and waste removal services were provided by Republic Services. Used oil, hazardous waste, and used battery removal services are provided by Safety-Kleen, Inc.

5.3 Interior and Exterior Observations

Observations made by Geosyntec during the Site reconnaissance are documented as follows:

Geosyntec Site Reconnaissance Observations		
ASTM Section	Feature or Condition	Description
<i>Interior and Exterior Observations</i>		
9.4.2.3 & 9.4.2.8	Hazardous Substances or Petroleum Products	Two diesel ASTs associated with generators (described below) were observed in the eastern portion of the building. A Universal Waste Storage area in the eastern portion of the building was observed to contain a 55-gallon drum of used oil, a 55-gallon drum of empty aerosol cans, empty 55-gallon drums, 1-gallon buckets of waste paints and finishes, 5-liter and 1-liter containers of motor oil, and 1-gallon containers of bleach. Small quantities of paints, adhesives, lubricants, and torch fuel were observed in a flammable cabinet in the eastern portion of the building.
9.4.2.4	Underground Storage Tanks (USTs)	No evidence of USTs was identified.
9.4.2.4	Aboveground Storage Tanks (ASTs)	A 15,000-gallon diesel AST and a 1,000-gallon diesel AST associated with generators were observed to be in good condition in the eastern portion of the building.
9.4.2.5	Odors	No notable odors were identified.
9.4.2.6	Pools of Liquids	Pools of hydraulic fluid were observed in and around elevator equipment inside the buildings. Generally, the hydraulic fluid was contained within the equipment's secondary containment, but oil staining was locally present on the concrete floor near some equipment. The concrete flooring in the vicinity of the hydraulic fluid was observed to be intact and in good condition.
9.4.2.7	Drums and Containers > 5 Gallons	A 55-gallon drum of used oil, a 55-gallon drum of empty aerosol cans, and several empty 55-gallon drums were observed in the Universal Waste Storage area.
9.4.2.9	Unidentified Substances/Containers	No unidentified containers were identified.
9.4.2.10	Polychlorinated Biphenyl (PCB) Items	Pad-mounted utility-owned transformers are reportedly installed in the northern interior of the building. The age and PCB content (if any) of the transformers were not reported, and PCB labels were not observed on the identified transformers; however, the transformer room was not accessible. The transformers are owned and maintained by Southern California Edison.

Geosyntec Site Reconnaissance Observations		
ASTM Section	Feature or Condition	Description
<i>Interior Observations</i>		
9.4.3.1	Heating and Cooling Systems	Heating and cooling systems were observed within the building.
9.4.3.2	Stains/Corrosion	Staining was observed in proximity to leaking hydraulic equipment in the elevator rooms of the building. The concrete flooring in the vicinity of the staining was observed to be intact and in good condition.
9.4.3.3	Drains and Sumps	Floor drains were observed in the restroom and kitchen areas of the building. These drains reportedly discharge into utility-owned sanitary sewers.
<i>Exterior Observations</i>		
9.4.4.1	Pits, Ponds, or Lagoons	No pits, ponds, or lagoons were observed.
9.4.4.2	Stained Soil or Pavement	No areas of staining indicative of potential subsurface contamination were observed at the Site.
9.4.4.3	Stressed Vegetation	No obviously stressed vegetation indicative of a chemical discharge or application was observed at the Site.
9.4.4.4	Solid Waste	Office waste was observed to be collected in small bins throughout the interior of the Site. A waste compactor was observed in the southern exterior of the building.
9.4.4.5	Wastewater or Stormwater Discharge	No wastewater discharge was observed on the Site, with the exception of domestic waste. Stormwater at the Site drains to storm drains located in paved areas.
9.4.4.6	Wells	No wells (water production or monitoring) were observed at the Site.
9.4.4.7	Septic Systems	No evidence of septic systems was observed at the Site during Geosyntec's visit.

5.4 Adjoining Property Reconnaissance

Geosyntec did not visit the adjoining properties but did observe them from vantage points on the Site and on public roads near the Site. Our limited inspection of adjoining and vicinity properties did not reveal conditions suggesting obvious environmental impairments with the ability to impact the Site at the adjoining properties during the time of our Site reconnaissance.

6. INTERVIEWS

6.1 Interview with Current Owner/Occupant

On 4 June 2021, Geosyntec conducted an in-person interview with Armando Flores of Bank of America. Mr. Flores indicated they have been associated with the Site since 2011. Mr. Flores

supplied information regarding Site features, operations, and history. The information gathered during the interview is included in this document.

6.2 Interview with Previous Owner/Occupant

Geosyntec was not provided with contact information for any of the former property owners; Geosyntec did not conduct an interview with former owner representatives.

6.3 Interview with Local Agencies

In accordance with the Client agreed-to scope of work associated with this Phase I ESA, Geosyntec did not interview local agency personnel.

7. FINDINGS, OPINIONS, AND DATA GAPS

In the following sections, Geosyntec presents our findings and opinions, data gaps, and conclusions (Sections 7.1 through 7.3) regarding any identified RECs, Controlled RECs (CRECs), Historical RECs (HRECs), and/or *de minimis* conditions associated with the Site.

7.1 Findings and Opinions

Geosyntec has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Site described herein. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. The Phase I ESA performed by Geosyntec has revealed the following conditions as defined by ASTM:

RECs

As defined by ASTM E1527-13, a REC is: “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

The following RECs were identified during the course of this assessment.

- **Abandoned On-Site UST:** Historical reports identified an abandoned 4,000-gallon tank which was installed on-Site to act as secondary containment in case of a release from a former power transformer. SCE reportedly owned the transformer and was responsible for any releases. The UST was reportedly never used and was abandoned in place in 1999; however, no subsurface sampling was conducted around the UST or former transformer

prior to or after abandonment. The presence of an abandoned UST without sampling or regulatory concurrence represents a REC.

CRECs

A CREC is “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

No CRECs were identified during the course of this assessment.

HRECs

An HREC is “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

The following HRECs were identified during the course of this assessment:

- **Historical On-Site Clarifier and USTs:** Historical reports identified two former 48,000-gallon diesel USTs which were installed on-Site to power backup generators in case of power failure, and an abandoned clarifier which was installed for management of the liquid waste stream related to the prior on-Site developing of microfiche. Petroleum products or other chemicals may have been associated with the development of microfiche and may have impacted the subsurface at the Site in the event of a release associated with the clarifier. Additionally, a 47-gallon release was reported from one of the 48,000-gallon USTs in 1995, and both 48,000-gallon USTs were removed later that year. Soil investigations and remedial actions were implemented to address residual hydrocarbon impacts to the soil. During these investigations, TPH impacts to soil were encountered that were previously unknown and reportedly unrelated to the identified release, indicating other unknown releases could have also occurred elsewhere. Soil was reportedly excavated upon the identification of additional contamination. Subsurface sampling near the clarifier in 1994 did not report significant levels of VOCs or metals in soil or groundwater. The clarifier was abandoned in place. A NFA determination was issued for the property in 1995 by OCHCA; therefore, the presence of the former USTs and the abandoned clarifier at the Site represents an HREC.

De Minimis Conditions

A *de minimis* condition is a condition that “generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies”. *De minimis* conditions are not recognized environmental conditions.

Based on the information Geosyntec obtained, Geosyntec has concluded that the following findings do not meet the definition of a REC, CREC or HREC and are *de minimis* conditions:

- **Surface Staining in Elevator Equipment Rooms:** During Site reconnaissance, pools of hydraulic fluid were observed in and around elevator equipment at the Site. Generally, the hydraulic fluid was contained within the equipment’s secondary containment; however, staining of the concrete flooring was locally observed surrounding some of the equipment. The concrete flooring in the vicinity of the hydraulic fluid was observed to be intact and in good condition, therefore the surface staining is classified as a *de minimis* condition.
- **Southern California Edison Transformer Room:** During the Site reconnaissance a transformer room was identified on-Site which contains transformers and transformer equipment as reported by Armando Flores of Bank of America. Geosyntec was unable to access the transformer room. SCE reportedly owns and maintains the transformer equipment within the transformer room. While the transformer room could not be observed, there were no records or reports of releases and the condition of the building floor throughout the remainder of the building generally appeared to be competent with no cracks in the areas observed. In the absence of additional information indicating a release has occurred, Geosyntec considers this finding to represent a *de minimis* condition.

7.2 Data Gaps

In accordance with ASTM E1527-13, this section documents data gaps in the information obtained and reviewed as part of this Phase I ESA and discusses the associated significance. A data gap is defined as being “a lack of or inability to obtain information required by this practice [ASTM E1527-13] despite good faith efforts by the environmental professional to gather such information”. Data gaps identified included the following:

- Due to time and scope limitations in preparing the Phase I ESA, no in-person file review was conducted with local, state, or federal agencies.
- Geosyntec was not granted access to the transformer room on-Site due to access restrictions in place by SCE, thus was not able to observe the conditions or equipment in this area of the Site. According to Armando Flores, SCE owns and maintains the transformers and equipment in the transformer room.

Collectively, in Geosyntec's opinion, none are considered to be significant with respect to identification of additional RECs for the Site. These data gaps have been incorporated into our findings.

7.3 Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of 275 Valencia Avenue, Brea, California 92823 the property. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of RECs in connection with the property except the following:

- Abandoned On-Site Underground Storage Tank.

8. NON-SCOPE CONSIDERATIONS

8.1 Asbestos-Containing Materials (ACM)

The buildings on the Site were constructed in 1981 and 1983, and as such, asbestos-containing material (ACM) may be present in building materials at the Site. Armando Flores of Bank of America was not aware of ACM being present in building materials at the Site and was not aware of any past ACM surveys or abatement activities. Please note that this report should not be construed as constituting an asbestos assessment for the purposes of demolition or reconstruction or for complying with applicable regulatory standards.

8.2 Lead-Based Paint (LBP)

The buildings on the Site were constructed in 1981 and 1983. Buildings constructed in or before 1978 are presumed to contained LBP, unless inspection or sampling are completed to refute this presumption. Armando Flores of Bank of America was not aware of LBP being present in building materials at the Site and was not aware of past LBP surveys or abatement activities. Please note that this report should not be construed as constituting a lead-based paint survey for the purposes of demolition or reconstruction or for complying with applicable regulatory standards.

8.3 Water and Mold

The Site buildings were constructed in 1981 and 1983. Armando Flores of Bank of America was not aware of reported water damage or mold issues associated with the Site buildings. In addition, Geosyntec's reconnaissance did not identify readily observable indications of water damage or potential mold. Note that our assessment did not include a thorough review of all building spaces and areas of water damage or mold may be present in areas not readily observable.

8.4 Methane

The Client authorized Geosyntec to address methane as a Non-Scope Consideration task in this Phase I ESA. The Site is located adjacent to the south of the Brea-Olinda Oil Field, an active oil field that has operated many oil and gas wells since the 1800s. Seven wells are located within approximately 300 to 400 feet to the north, northeast and/or east of the Site, including idle and plugged wells. Orange County may have restrictions on the construction of new buildings in proximity to active or inactive oil well, unless the well has been assessed to ensure proper abandonment, and the CalGEM updated its well abandonment criteria in 2010. There are no known abandoned, inactive, or active oil wells on the Site. Although methane is not a CERCLA-regulated hazardous substance as defined in ASTM 1527-13, methane may pose an explosive risk. The presence of former oil wells in the Site vicinity and the potential for elevated methane in the subsurface present a Business Environmental Risk.

TABLES

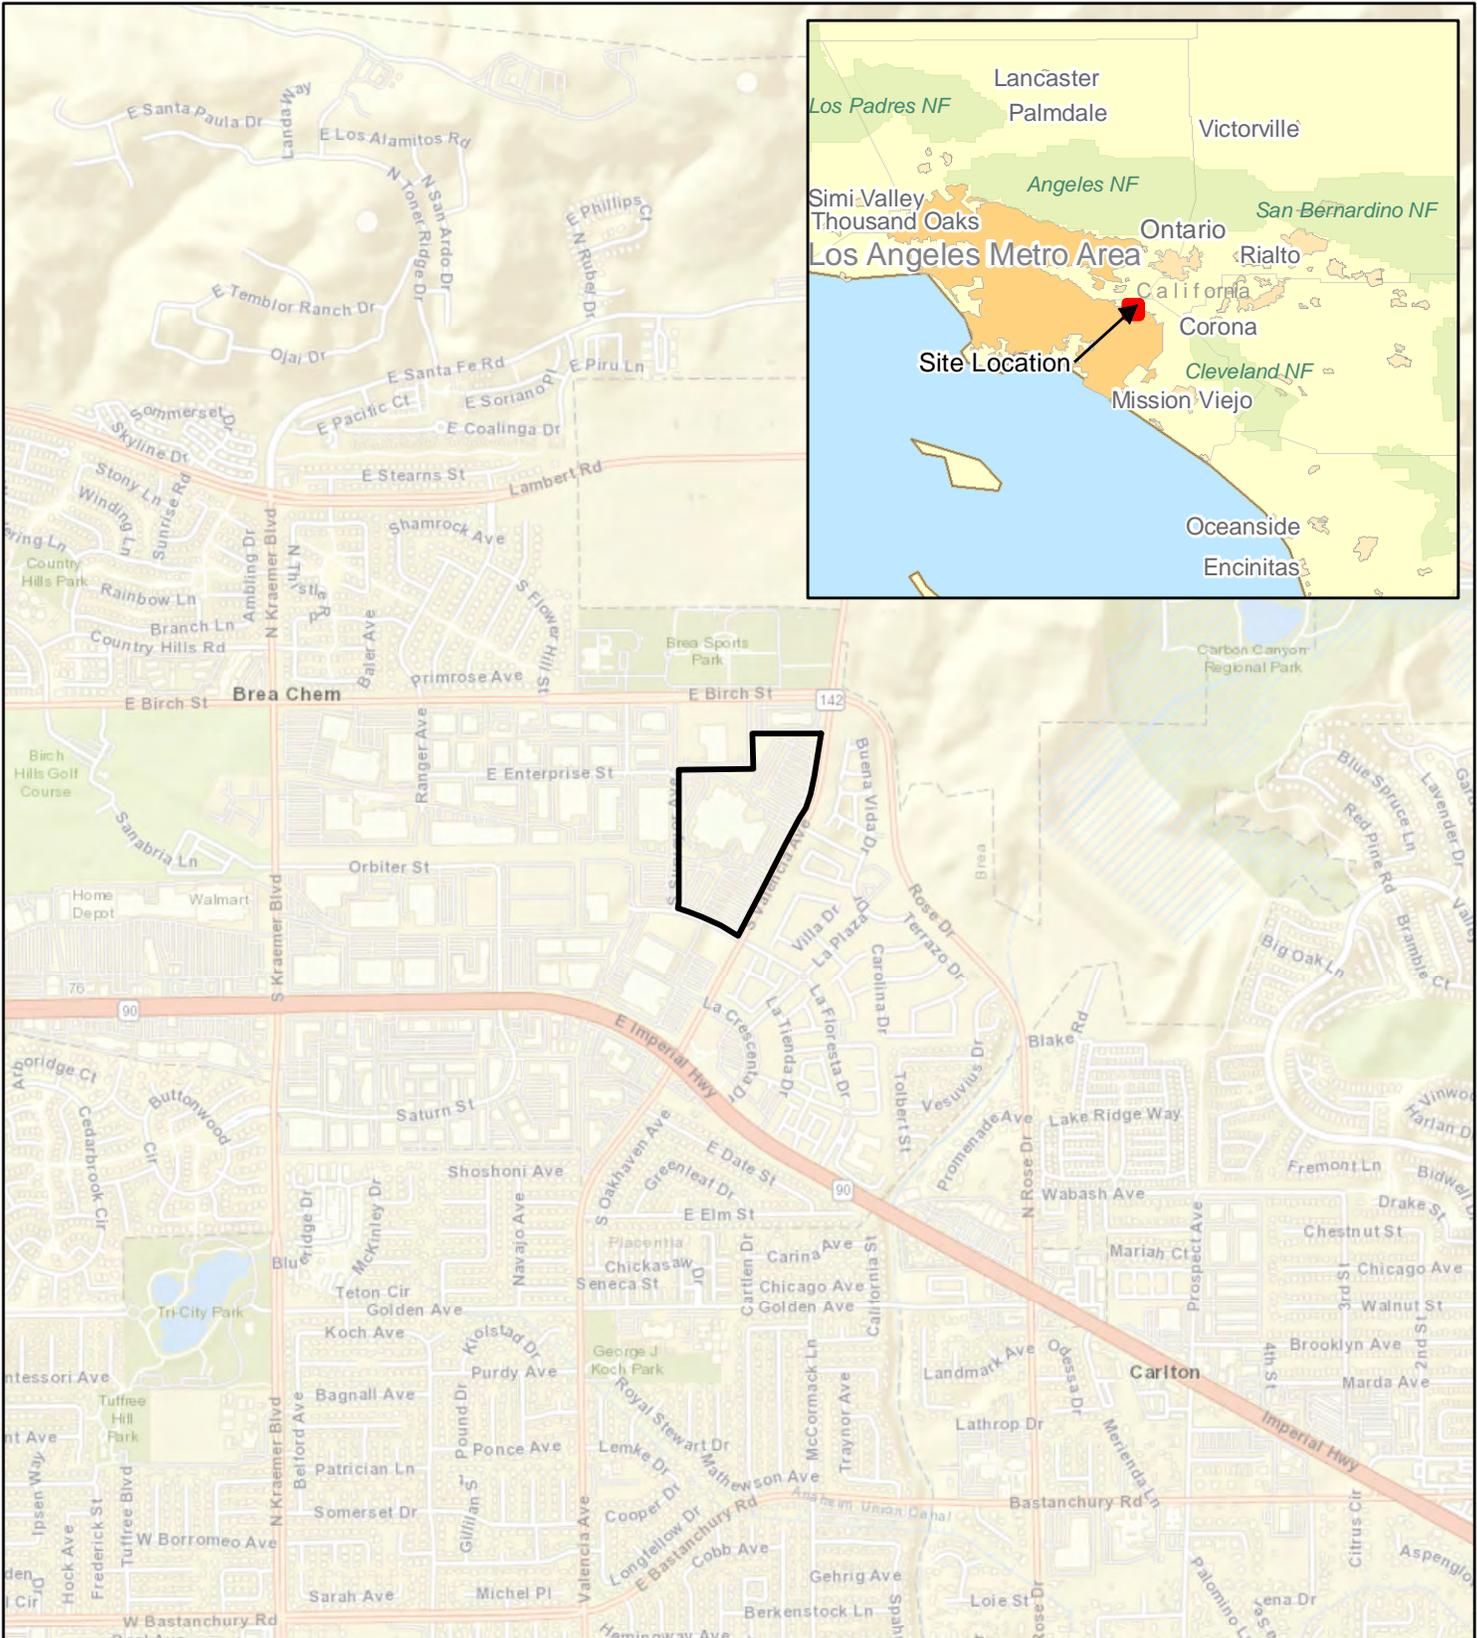

**Table 1
Historical Records Review – Geosyntec Observations
275 Valencia Avenue
Brea, California 92823**

Aerial Photographs ¹	Topographic Maps	City Directories
<p>Site: 1928: Site is undeveloped, vacant land. A small stream passes through the Site along the eastern boundary. 1939: No significant changes. 1947: Small stream appears to have dried up. No other significant changes. 1960: Two possible drainage ditches or canals pass through the property. 1972: One of the drainage ditches has dried up. 1975: No significant changes. 1985: From Google Earth: a large structure and parking lot, aerial photograph quality was poor. 1988: Remains similar to 1985. 1995, 2002, 2005, 2009, 2010, 2012, 2014, 2016, 2018, 2020: No significant changes.</p> <p>Vicinity: 1928: Vicinity properties are vacant land. There are some agricultural field in the north vicinity. Small streams or drainage canals pass through vicinity. Modern day Valencia Ave spans along the eastern Site boundary. 1939: Increased agriculture in vicinity of the Site. Adjoining properties are vacant. There appear to be oil wells in the northern vicinity. The number of wells is difficult to identify. 1947: No significant change. 1953: Southeastern adjoining property has been developed into what appears to be a commercial/industrial building. There are approximately a dozen structures. There appears to be a pond on the eastern adjoining property. 1960: The footprint of the southeastern adjoining property has increased. 1972, 1975: No significant change. 1988: Major development of adjoining and vicinity properties. Numerous large, likely commercial/industrial structures are present on all adjoining properties, except for the eastern adjoining property. 1995, 2002, 2005: No significant change. 2009: The western and southwestern adjoining properties have been completely cleared. The northern vicinity properties have been cleared and have been redeveloped with what appears to be a school or park. 2014: Construction of single-family homes has begun on the southeastern adjoining property. The northern vicinity property continues to be redeveloped. 2016: No significant change. 2018: The eastern and southeastern properties are now completely covered in single-family homes. 2020: No significant change.</p>	<p>Site: 1896, 1898, 1901: No structures on the Site. 1925, 1928: Site not depicted on map. 1942, 1949, 1950: No structures on the Site. 1964, 1972, 1981: No structures on the Site, Loftus Channel runs east-west onto the southern portion of the Site and extends to the northern Site boundary. 2015: Topographic map no longer shows any structures. Loftus Channel remains depicted on the Site.</p> <p>Vicinity: 1896, 1898: Immediate vicinity appears undeveloped, Placentia is located approximately 0.5 mile south of the Site. 1901: California Railroad runs north-south approximately 0.5 mile east of the Site and an unnamed roadway is constructed approximately 0.1 mile west of the Site. 1925, 1928: Vicinity not depicted on the map. 1942, 1949, 1950: Valencia Avenue adjoins eastern Site boundary; the remainder of the immediate vicinity appears undeveloped. Olinda Oil field is located approximately 0.2 mile north-northwest of the Site. Agricultural orchards are located approximately 0.1 mile north of the Site and approximately 0.4 mile south of the Site. 1964, 1972, 1981: A commercial or industrial complex with apparent tanks adjoining the Site to the southeast across Valencia Avenue. Oil fields remain in the vicinity of the Site to the north, northwest, and south. 2015: Topographic map no longer shows any structures.</p>	<p>Site: 1955, 1959, 1964, 1971, 1975, 1980, 1987, 1991, 1995: No listings. 2001: 275 Valencia Avenue is listed as LCA. 2004: 275 Valencia Avenue is listed as “XXXX”. 2008: 275 Valencia Avenue is listed as A 24 All Day Emergency Locksmith, Bank of America, and Jones Lang La Salle (real estate management). 2012: 275 Valencia Avenue is listed as Brea Café and Jones Lang La Salle. 2016, 2020: 275 Valencia Avenue is listed as Bank of America and Jones Lang La Salle.</p> <p>Vicinity: 1955, 1959, 1964, 1971, 1975, 1980: No listings. 1987: No listings on Valencia Avenue, Surveyor Avenue, or NASA Street. Individual names along East Birch Street, possibly residential and commercial listings including Harbor Truck Bodies/Harbor Fabricating at 3200 East Birch Street. 1991, 1996: No listings on Valencia Avenue, Surveyor Avenue, or NASA Street. Residential and commercial listings on East Birch Street. 2001, 2004: Commercial businesses on Valencia Avenue and East Birch Street including Unocal Corporation (376 Valencia Avenue). Central Sprinkler Co at 3170 NASA Street listed by 2004. 2008, 2012: Commercial listings on Valencia Avenue, Nasa Street, and East Birch Street. 2016, 2020: Commercial listings on Valencia Avenue including Orange County Landfill and Recycling at 1942 Valencia Avenue. Commercial listings on NASA Street and East Birch Street.</p>

Notes:

1. Additional aerial photography review was completed using Google Earth when available.
2. According to ERIS, fire insurance maps (e.g. Sanborn maps) are not available for this locale.

Subject: Remedial Action At Beckman, 3300 Birch Street, Brea, CA - O.C.H.C.A.
Case #85UT6

Dear Mr. Palmerino:

This letter confirms the completion of site investigation and remedial action at the above site. With the provision that the information provided to this Agency was accurate and representative of existing conditions, it is the position of this office that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this Agency of any changes in report content, future contamination findings, or site usage.

If you have any questions regarding this matter, please contact Suzanne Wilson at (714) 667-3721.

Very truly yours,

Livio F. Davanzo, Ph.D., R.E.A.

Case Summary and Closure Rationale

D.B.A.: Beckman

R.P.: Joe Palmerino

Address: 3300 Birch St. Brea, CA.

Current Land Use: .

Adjacent Land Use: Comm

Future Land Use: Same

UST Information (Number, Size, Material Stored, etc.): 2 12K Diesel Tanks

Contaminant	Highest Conc. Soil (ppm)		Highest Conc. Groundwater (ppb)	
	Initial	Final	Initial	Final
1. TPH	24,000	24,000 - at 35'	N/A	
2. Benzene	Test + Not Remaining at the time	ND		
3. Toluene		770		
4. Xylene		204		
5. Ethylbenzene		540		
6.				

Depth of Highest Benzene Conc. Remaining: 0 (ft) 0 (ppm)

Deepest Depth of Benzene Remaining: 0 (ft) 0 (ppm)

Depth to Groundwater: 142 Ft. (estimated X measured)

Soil Types: Sandy clayey silt

Forebay X Pressure Intrusion Tidal Hills Near OCWD recharge

Case Summary (Cleanup Efforts and Closure Rationale): 300-500 gallons of diesel

fuel overflowed from the vent line. Contaminated soil was excavated ^{to 24' BGS} where feasible due to
the depth + proximity to adjacent buildings. 9 borings were drilled to delineate the vertical
and horizontal extent of contamination. Depth to GHW was also determined. The vertical extent
of contamination extends ^{BGS} 45'. No benzene was detected in any of the analyzed samples
There is approximately 100' below ^{the} last contaminated soil sample to groundwater
The site has been adequately characterized and the soil plume delineated. No benzene was
present in the samples analyzed + low levels of Toluene, xylene, ethylbenzene,
were present and within allowable levels of ^{the} General Risk Appraisal. Considering the
Depth to GHW (142' BGS) along with the information provided above, this site is
recommended for closure.

OK ADD 9-26-90

PARTNER

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

Bank of America Campus

275 Valencia Avenue
Brea, California 92823

October 15, 2014
Partner Project No. 14-126793.1

Prepared for:

Cerberus Capital Management

875 Third Avenue
New York, New York 10022

October 15, 2014

Mr. Paul Warmus
Cerberus Capital Management
875 Third Avenue
New York, New York 10022

Subject: Phase I Environmental Site Assessment
Bank of America Campus
275 Valencia Avenue
Brea, California 92823
Partner Project No. 14-126793.1

Dear Mr. Warmus:

Partner Assessment Corporation (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in general conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (646) 794-5975 or ctallinger@partneresi.com.

Sincerely,

Charles Tallinger
Principal

EXECUTIVE SUMMARY

Partner Assessment Corporation (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Cerberus Capital Management for the property located at 275 Valencia Avenue in the City of Brea, Orange County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Cerberus Capital Management with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the west side of Valencia Avenue within a mixed commercial and residential area of Orange County. Please refer to the table below for further description of the subject property:

Subject Property Data

Address:	275 Valencia Avenue, Brea, California
Property Use:	Commercial
Land Acreage (Ac):	31.6 Ac
Number of Buildings:	Two (Operations & Service)
Number of Floors:	Operations: Three-story with a partial mechanical penthouse Service: Three-story
Gross Building Area (SF):	637,503 SF (total)
Date of Construction:	1981/1983
Assessor's Parcel Number (APN):	320-238-17, 320-301-11 and -12
Type of Construction:	Slab-on-grade; Steel and concrete frame; Flat built-up roof
Current Tenants:	Bank of America
Site Assessment Performed By:	Jonathan Wu
Site Assessment Conducted On:	September 29, 2014

The subject property is currently occupied by Bank of America for commercial use as a call center and operations facility. The operations building is used entirely for administrative office purposes; the service building houses the central plant for mechanical and electrical systems, with some offices, a cafeteria and associated kitchen areas. In addition to the current structures, the subject property is also improved with asphalt-paved parking areas and associated landscaping.

According to available historical sources, the subject property was formerly undeveloped as early as 1938 until developed with the current structures in 1981 & 1983. Tenants on the subject property have included Security Pacific Bank Operations Center and Bank of America.

The immediately surrounding properties consist of Birch Corporate Center and an unoccupied commercial building to the north; Suzuki Part Distribution Center to the south across Nasa Street; graded vacant land to be developed for residential buildings to the east across Valencia Avenue; and Superior Manufactured Packaging Products across Surveyor Avenue to the west.

According to Orange County Water District, the depth and direction of groundwater in the vicinity of the subject property is inferred to be present at approximately 100 feet below ground surface (bgs) and flows toward the southwest.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Two 48,000-gallon capacity diesel fuel underground storage tanks (USTs) were formerly located at the subject property. The diesel fuel USTs supplied backup fuel for the facility operations. The USTs were removed in February 1995 under the supervision of the Orange County Health Care Agency (OCHCA). The tank pit was over-excavated and confirmatory soil samples were taken and analyzed for the presence of total petroleum hydrocarbons (TPH) including benzene, toluene, ethylbenzene and total xylenes (BTEX). No TPH or BTEX were detected in the confirmatory samples. Subsequently, the OCHCA granted closure in September 6, 1995 and did not require any further action. A copy of the NFA letter is included in Appendix B of this report. Based on the removal of the tanks, the analytical results, and the regulatory closure, the former USTs are considered a historical recognized environmental condition and no further action is considered necessary.
- One 4,000-gallon secondary containment transformer oil UST was located adjacent to the northeast corner of the subject property building. This UST was formerly connected to a power transformer and was designed to act as secondary containment in the event of a release from the transformer. Southern California Edison (SCE) owned the transformer and assumed responsibility

for any releases. According to Mr. Eddie Cordero, the subject property building engineer, the UST had never been used and was abandoned in place in 1999. As the location of this tank was in close proximity to the former 48,000-gallon capacity USTs and soil samples from the area did not indicate any subsurface contamination, there is a low potential for a release from this former UST. Based on the in-place abandonment of the UST, reported non-use of the UST in the past, and the analytical results from the removal of the adjacent USTs, this former UST is considered a historical recognized environmental condition and no further action is considered necessary.

- A clarifier was formerly used in connection with micrographic operation in which microfiches were formerly developed at the subject property. The clarifier had been connected to the floor drain in this area. According to Mr. Cordero, building engineer, the floor drain was filled with concrete and covered in 1994. The clarifier was reportedly closed under OCHCA's supervision. Soil sampling in the vicinity of the clarifier did not indicate any residual contamination and the clarifier pit was backfilled. Based on the nature of the former use of this clarifier, abandonment of the clarifier and associated floor drain, and reported analytical results, this former clarifier is considered a historical recognized environmental condition, and no further action is considered necessary.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Due to the age of the subject property buildings, there is a potential that ACM is present. Overall, all suspect ACMs were observed in good condition and do not pose a health and safety concern to the occupants of the subject property at this time. Should these materials be replaced, the identified suspect ACMs would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 275 S. Valencia Avenue in the City of Brea, Orange County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- An O&M Program should be implemented in order to safely manage the suspect ACMs located at the subject property.

1.0 INTRODUCTION

Partner Assessment Corporation (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 275 Valencia Avenue in the City of Brea, Orange County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject

property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Cerberus Capital Management engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Cerberus Capital Management. Either verbally or in writing, third parties may come into possession of this report or all or

part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted the Terms and Conditions for which this report was completed. A copy of Partner's standard Terms and Conditions can be found at <http://www.partneresi.com/terms-and-conditions.php>

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, and a title search from the report user. This information was not provided at the time of the assessment.
- Partner was unable to determine the property use at 5-year intervals, which constitutes a data gap. Partner reviewed all standard historical sources and conducted appropriate interviews.
- Partner submitted Freedom of Information Act (FOIA) requests to OCHCA for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property. As of this writing, these agencies have not responded to Partner's request. Based on information obtained from other historical sources, and prior reports this limitation is not expected to alter the overall findings of this assessment.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 275 Valencia Avenue in Brea, California is located on the west side of Valencia Avenue. According to the Orange County Assessor, the subject property is legally described as shown on the Description card in Appendix B. The subject property is identified by Assessor's Parcel Numbers (APNs) 320-233-17, 320-301-11 and 320-301-12.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by Bank of America for commercial use as a call center and operations facility. The subject property consists of two structures connected by a center atrium/lobby. The western structure is identified as the operations building, and the eastern structure is identified as the service building. The operations building is used entirely for administrative office purposes; the service building houses the central plant for mechanical and electrical systems, with some offices, a cafeteria and associated kitchen areas. The central plant is located within the southwestern portion of the ground level of the service building and includes three emergency power generators. The generators are fueled by two, diesel aboveground storage tanks (ASTs). The ASTs have capacities of 1,000-gallons and 1,500-gallons, respectively. Both tanks are double-walled, have secondary containment and are equipped with electronic leak detection systems that are monitored routinely by trained personnel.

In addition to the current structures, the subject property is also improved with asphalt-paved parking areas, storm water drainage features, and associated landscaping.

The subject property is designated for light industrial development by the City of Brea.

The subject property was identified as LUST, HIST UST, CA FID UST, SWEEPS UST, Hist Cortese, AST, EMI, RCRA-SQG, and RGA LUST sites in the regulatory database report, as further discussed in Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial and residential area of Orange County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties

North: Birch Corporate Center (3350 Birch Street) and an unoccupied commercial/industrial building (3300 Birch Street)

South: Nasa Street beyond which is Suzuki Part Distribution Center (375 Valencia Avenue)

East: Valencia Avenue beyond which is graded land to be developed with residential buildings

West: Surveyor Avenue followed by Manufactured Packaging Products Inc. (3200 Enterprise Street); and a demolished former commercial/industrial building (3170 Nasa Street)

The adjacent properties to the north and west were identified as LUST, UST, HIST UST, CA FID UST, SWEEPS UST, RCRA-SQG and RCRA-NonGen sites in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Yorba Linda, CA* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 424 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping moderately toward the southwest. The subject property is depicted on the 1981 map as undeveloped.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

City of Brea is located within the Lower Santa Ana River (LSAR) Groundwater Basin that underlies the Los Angeles-Orange County Coastal Plain. The LSAR basin underlies a surface area of about 325 square miles and supports 800 to 1,000 active water wells. This basin is bounded by Santa Ana Mountains to the east, San Joaquin Hills and Pacific Ocean to the south. The basin is bounded to the north by Coyote and Puente Hills and to the west is Los Angeles-Orange County boundary. The subject property is situated within Buena Park Hydrologic Subarea.

Two principal aquifers supply groundwater to Orange County: The shallow upper aquifer system and the deep Main aquifer system. Each system comprises numerous aquifer horizons interfingering by clay zones that limit hydraulic communication and cause varying degrees of confinement of the groundwater.

Overlying these two aquifers is a zone of generally poor quality groundwater commonly referred to as a perched or semi perched zone. This zone is not perched in classic sense, but is in hydraulic communication, at least locally with the deeper principal aquifers. According to OCWD, the depth to groundwater in the vicinity of the subject property is estimated to be approximately 100 feet below ground surface (bgs) and flows to the southwest.

2.4.3 Geology/Soils

The subject property is directly underlain by Quaternary alluvial deposits. The upper most sediments are Holocene in age and are as much as 175 feet thick. These sediments were deposited on alluvial flood plains, and are stream channels. The Holocene alluvium consists of interfingering and lenticular deposits of clay, silt, sand, and gravel. Although laterally variable, the upper 100 feet is usually dominated by fine-grained sediments, whereas a higher proportion of sand and gravel occurs in the lower part of the Holocene deposits.

The soil type that underlies the subject property is known as the Tujunga-Soboba Association. These soils are characterized as having 0 to 5% slopes. The Tujung-Soboba Association soils generally are excessively drained with rapid subsoil permeability. This type of soils are generally composed of grayish-brown to brownish-gray, cobbly, very fine sandy loam and is slightly acidic to mildly alkaline.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06059C 0061J, dated December 3, 2009, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

<i>Historical Use Information</i>		
Period/Date	Source	Description/Use
1938-1980	Aerial Photographs, Topographic Maps	Undeveloped/Native land
1981-Present	Aerial Photographs, Building Records, City Directories, Interviews, Previous Report	Commercial

Occupants of the subject property include Security Pacific Bank Operations Center and Bank of America

No potential environmental concerns were identified in association with the current or former use of the subject property.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR) on September 29, 2014. The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date:	1938 1946	Scale:	1"=500'
--------------	--------------	---------------	---------

Subject Property:	Undeveloped
North:	Undeveloped
South:	Undeveloped
East:	Undeveloped across a road at the current location of the Valencia Avenue
West:	Undeveloped

Date:	1952 1963 1972 1977	Scale:	1"=500'
--------------	------------------------------	---------------	---------

Subject Property:	Undeveloped
North:	Undeveloped
South:	Undeveloped
East:	Primarily undeveloped with a large commercial or possibly industrial facility across Valencia Avenue towards the southeast
West:	Undeveloped

Date:	1995	Scale:	1"=500'
--------------	------	---------------	---------

Subject Property:	Appears to be developed with the existing structures and most of the current parking lots. The area to the west of Surveyor Ave remains vacant land.
North:	Appears to be developed with the existing commercial/industrial structures
South:	Appears to be developed with the existing structure across Nasa Street
East:	No significant changes to the structure visible to the southeast. The vacant land directly across Valencia Avenue appears to possibly be used for agriculture

West: Appears to be developed with the existing commercial/industrial structures

Date: 2005	Scale: 1"=500'
Subject Property:	The area west of Surveyor Avenue appears to have been developed with the existing parking lot. No other significant changes visible.
North:	No significant changes visible
South:	No significant changes visible
East:	The land directly to the east across Valencia Avenue no longer appears to be used for agriculture. Surface soils are visible. Additionally, the large commercial/industrial structure to the southeast appears to be being demolished/deconstructed.
West:	No significant changes visible

Date: 2009-2012	Scale: 1"=500'
Subject Property:	No significant changes visible
North:	No significant changes visible
South:	No significant changes visible
East:	No structures are visible beyond Valencia Avenue. The entire area appears as vacant graded land with visible surface soils.
West:	No significant changes visible

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Sanborn map coverage was not available for the subject property.

3.3 City Directories

Partner reviewed historical city directories obtained from Brea Public Library on September 29, 2014 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for Subject Property

Year(s)	Occupant Listed
1972-1992	No Listings
1996-2005	Bank of America

Based on the city directory review, no environmentally sensitive listings were identified for the subject property address.

City Directory Search for Adjacent Properties

Year(s)	Occupant Listed
1972-1992	No Listing
1996-2005	Suzuki Motors, Olinda Nursery, Unocal Science & Technology

Based on the city directory review, no environmentally sensitive listings were identified for the adjacent property addresses; however, the subject property appears to be located in a light industrial area.

3.4 Historical Topographic Maps

Historical topographic maps were not researched as part of this assessment. Historical use of the subject property was researched through other standard historical sources.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 State Department

Regulatory Agency Data

Name of Agency:	State Water Resources Control Board (SWRCB)
Point of Contact:	Online
Agency Address:	3737 Main Street, Riverside, CA
Agency Phone Number:	951-782-4130
Date of Contact:	September 29, 2014
Method of Communication:	Online
Summary of Communication:	The SWRCB records indicated that a former 48,000-gallon diesel fuel USTs had impacted the underlying soil. The impacted soil was excavated and the confirmatory samples did not indicate the presence of any contaminants. Subsequently OCHCA closed the case with no further action. Additional details are provided in Section 4.2.3.

4.1.2 Health Department

Regulatory Agency Data

Name of Agency:	Orange County Health Care Agency (OCHCA)
Point of Contact:	Records
Agency Address:	1241 Dyer Road, Santa Ana, CA
Agency Phone Number:	714-433-6000
Date of Contact:	September 29, 2014
Method of Communication:	Email
Summary of Communication:	Partner has submitted written request to OCHCA; to date the requested information has not been received.

4.1.3 Fire Department

Regulatory Agency Data

Name of Agency:	Brea Fire Department (BFD)
Point of Contact:	Clerk
Agency Address:	1 Civic Center Drive, Brea, CA 92821
Agency Phone Number:	(714) 990-7655
Date of Contact:	September 29, 2014
Method of Communication:	In person
Summary of Communication:	BFD records generally pertained to Fire and Life Safety inspections. A permit to remove two 48,000-gallon diesel fuel USTs on March 15, 1995 was on file with BFD. Permits pertaining to hazardous material usage was issued by BFD on January 29, 2013.

4.1.4 South Coast Air Quality Management District

Regulatory Agency Data

Name of Agency:	Air Quality Management District (AQMD)
Point of Contact:	On-Line
Agency Address:	21865 Copley Drive, Diamond Bar, CA
Agency Phone Number:	909-396-2000
Date of Contact:	September 29, 2014
Method of Communication:	Online
Summary of Communication:	Permits were issued for Bank of America for the following: <ul style="list-style-type: none">• 1997: Boilers, Natural Gas• 1997: Charbroilers, Natural Gas• 1999: Gas Turbine Emergency Generator• 1999: Diesel fuel Emergency Generators

4.1.5 Regional Water Quality Agency

Regulatory Agency Data

Name of Agency:	Regional Water Quality Control Board (RWQCB)
Point of Contact:	Records
Agency Address:	3737 Main Street, Riverside, CA
Agency Phone Number:	951-782-4130
Date of Contact:	September 29, 2014
Method of Communication:	On-Line
Summary of Communication:	The RWQCB records were in regards to the former 48,000-gallon diesel fuel USTs, as further discussed in Section 4.2.3.

4.1.6 Department of Toxic Substances Control

Regulatory Agency Data

Name of Agency:	California Department of Toxic Substances Control (DTSC)
Point of Contact:	Records
Agency Address:	5796 Corporate Ave., Cypress, CA
Agency Phone Number:	714-484-5300
Date of Contact:	September 29, 2014
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the DTSC.

4.1.7 Building Department

Regulatory Agency Data

Name of Agency:	City of Brea Building Department
Point of Contact:	Records
Agency Address:	1 Civic Center Drive, Brea, CA 92821
Agency Phone Number:	714-990-7655

Regulatory Agency Data

Date of Contact:	September 29, 2014
Method of Communication:	In Person
Summary of Communication:	The following information was provided: <ul style="list-style-type: none">• 1981: Security Pacific Bank, permit for underground fire line• 1982: Brea Operations, permit for fire sprinkler system• 1984: Shore Fire, fire sprinkler improvements• 1991: Security Pacific Bank, new fire system• 1992: Pacific Southwest Realty, annual maintenance• 1997: Certificate of Occupancy for Bank of America• 1998:, Bank of America, door holder and smoke detector addition• 1999: Bank of America, diesel hydraulic starter system for existing turbine generators• 1999: Bank of America, addition of air handler unit• 1999:, Bank of America, remodel second floor (ATM Group)

4.1.8 Planning Department

Regulatory Agency Data

Name of Agency:	City of Costa Mesa Planning Department
Point of Contact:	Planner
Agency Address:	1 Civic Center Drive, Brea, CA 92821
Agency Phone Number:	714-990-7655
Date of Contact:	September 29, 2014
Method of Communication:	In Person
Summary of Communication:	The subject property is zoned M1, Light Manufacturing

4.1.9 Oil & Gas Exploration

Regulatory Agency Data

Name of Agency:	California Division of Oil, Gas and Geothermal Resources (DOGGR)
Point of Contact:	On-Line
Agency Address:	801 K Street, Sacramento, CA
Agency Phone Number:	916-322-1080
Date of Contact:	September 29, 2014
Method of Communication:	Online
Summary of Communication:	According to DOGGR, no oil or gas wells are located on the subject property. Three oil wells (Graham & Loftus Oil Corporation) that are plugged and abandoned were noted north of the subject property. In addition, several active, inactive and abandoned wells are located in the vicinity of the subject property.

4.1.10 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Orange County Assessor (OCA)
Point of Contact:	Records
Agency Address:	625 N. Ross Street, Santa Ana, CA
Agency Phone Number:	714-834-5400
Date of Contact:	September 29, 2014
Method of Communication:	Telephone
Summary of Communication:	The information received is discussed in various sections of this report.

A copy of pertinent documents is not included in Appendix B of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data				
Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	Y	Y	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N		
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	Y	Y	N
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	Y	Y	N

Radius Report Data

State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.50	N	N	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N
EDR MGP	Varies	N	N	N
EDR US Hist Auto Station	Varies	N	N	N
EDR US Hist Cleaners	Varies	N	N	N

4.2.2 Subject Property Listings

The subject property is identified as LUST, UST, Hist UST, Hist Cortese, RGA LUST, Haznet, EMI, AST, RCRA-SQG sites in the regulatory database report, as discussed below:

- Security Pacific National Bank, Brea Operations Center, a former occupant of the subject property, was identified as a LUST, UST, Hist UST, Hist Cortese, RGA LUST and EMI site.

According to available records two, 48,000-gallon capacity diesel fuel USTs were formerly located at the subject property. The diesel fuel USTs were installed in 1984 and supplied backup fuel for the facility operations. The USTs were removed in February 1995 under the supervision of the OCHCA. The underlying soil appeared to have been impacted upon removal. The tank pit was over-excavated and confirmatory soil samples were taken and analyzed for the presence of TPH, including BTEX. No TPH or BTEX were detected in the confirmatory samples. Subsequently, the OCHCA granted closure in September 6, 1995 and did not require any further action. A copy of the UST Closure Report, Phase II Report, and NFA letter is included in Appendix B of this report. Based on the removal of the tanks, confirmatory soil samples, and NFA letter, these tanks are not expected to represent an environmental concern to the subject property.

One 4,000-gallon secondary containment transformer oil UST was located adjacent to the northeast corner of the subject property building. This UST was formerly connected to a power transformer and was designed to act as secondary containment in the event of a release from the transformer. Southern California Edison (SCE) owned the transformer and assumed responsibility for any releases. According to Mr. Eddie Cordero, the subject property building engineer, the UST had never been used and was abandoned in place in 1999. As the location of this tank was in close proximity to the former 48,000-gallon capacity USTs, and soil samples from the area did not indicate any subsurface contamination, there is a low potential for a release from this former UST. Considering that the UST was never used and has been closed, this tank is not expected to represent an environmental concern to the subject property.

- Security Pacific National Bank, Brea Operations Center and Bank of America were also identified in the Haznet database. According to the records, both entities generated potentially hazardous wastes including waste oil/mixed oil; laboratory waste chemicals, tank bottoms (clarifier sludge) and off-specification, aged or surplus organics that were disposed off-site from 1994 through 2012. No violations and/or releases were reported. Based on the regulatory status and absence

of a reported of a release, this listing is not expected to represent an environmental concern to the subject property.

- Bank of America was identified in the Emissions Inventory database (EMI). According to the records, permits to operate equipment through the California Air Resources Board were granted to the subject property from at least 2002 through 2012. No violations were reported. Based on the regulatory status and nature of the listing, this listing is not expected to represent an environmental concern to the subject property.
- Security Pacific National Bank, Brea Operations Center was identified in RCRA-SQG database. According to the records, small quantities of regulated hazardous wastes were generated in 1996; these materials were disposed off-site with no reported of violations or releases. Based on the regulatory status and absence of a reported of a release, this listing is not expected to represent an environmental concern to the subject property..
- The subject property was identified in the AST database. Three generators are fueled by two diesel aboveground storage tanks (ASTs). The ASTs have capacities of 1,000-gallons and 1,500-gallons, respectively. Both tanks are double-walled, have secondary containment and are equipped with electronic leak detection systems that are monitored routinely by trained personnel. No violations or releases have been reported. Based on the regulatory status, absence of a reported of a release, and aboveground nature of the tanks, this listing is not expected to represent an environmental concern to the subject property.

4.2.3 Adjacent Property Listings

The adjacent property to the west is identified as a RCRA-SQG, Haznet, and EMI site in the regulatory database report, as discussed below:

- Manufactured Packaging Product at 3200 Enterprise Street is located adjacent to the west and hydrologically down-gradient to the subject property, across Surveyor Avenue. This facility is listed in RCRA-SQG, Haznet and EMI databases. According to the records, this facility generates small quantities of regulated hazardous waste with no reported of violations and releases. This facility is also permitted to operate equipment through the South Coast Air Quality Management District. Based on the inferred groundwater flow direction, regulatory status, and absence of a reported of a release, these listings are not expected to represent an environmental concern to the subject property.

The adjacent property to the north is identified as a LUST, UST, CA FID UST, SWEEPS UST and Hist UST site in the regulatory database report, as discussed below:

- Beckman Instruments, a former occupant at 3300 Birch Street, is located adjacent to the north of the subject property. This facility is listed in the LUST, UST, CA FID UST, SWEEPS UST and Hist UST databases. According to the records, this facility was formerly equipped with two USTs installed in 1980 for the storage of diesel fuel. The tanks were removed in 1990; upon removal it was determined that the soil in the tank pit was impacted by diesel fuel. The impacted soil was

removed and the case was granted a closure by OCHCA on September 24, 1990. Based on the media impacted, regulatory closure, and length of time since the release was discovered, these listings are not expected to represent a significant environmental concern.

Based on the adjacent property findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

No additional sites of concern were identified.

4.2.5 Orphan Listings

No orphan listings are identified for the subject property or adjacent properties in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Cerberus Capital Management (User of this report).

User Responsibilities

Item	Provided By User	Not Provided By User	Discussed Below	Does Not Apply
Environmental Pre-Survey Questionnaire		X		
Title Records, Environmental Liens, and AULs			X	
Specialized Knowledge			X	
Actual Knowledge			X	
Valuation Reduction for Environmental Issues			X	
Identification of Key Site Manager	Section 5.1.3			
Reason for Performing Phase I ESA	Section 1.1			
Prior Environmental Reports			X	
Other				X

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User.

5.1.3 Interview with Key Site Manager

Mr. Eddie Cordero, building engineer, indicated that he had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

Partner was not provided with any additional documentation for review.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data

Site Assessment Performed By: Jonathan Wu
Site Assessment Conducted On: September 29, 2014

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for <Property Address> (Subject Property)

Name	Title/Role	Contact Number	Site Walk* Yes/No
Mr. Eddie Cordero	Building Engineer	Not Provided	Yes

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in a trash compactor located by the loading docks on the south side of the operations building on the subject property. An independent solid waste disposal contractor removes solid waste from the subject property. According to property personnel, only household trash is collected in the on-site solid waste dumpsters. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Brea services the subject property vicinity. No wastewater treatment facilities or septic systems are observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located throughout the subject property and in the public right of way. Site storm water from roofs, landscaped areas, and paved areas is directed to on-site storm water drains connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Department of Agriculture; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity/ natural gas provided by SCE and Southern California Gas Company. The mechanical system is comprised of a split system with a central unit and interior air-handler and an exterior condenser. Hot water is provided by individual natural gas/ hot water heaters.

Partner observed a previous operations plant in the southwest portion of the first floor of service building, which consisted of boilers for the building's hot water, a turbine to generate electricity during power failure, and other equipment necessary to the function of the building. The turbine used to be a part of a co-generation plant, which reportedly shut down in 1994. The co-generation plant used three gasoline turbines and three diesel boilers when it had been functioning. These had been left in place since then and are no longer in operation.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Partner identified hazardous substances used, stored, and/or generated on the subject property as noted in the following table:

<i>Hazardous Substances and/or Petroleum Products Noted Onsite</i>				
Substance	Container Size	Location	Nature of Use	Disposal Method
Diesel Fuel	1,000-gallon AST	Central Plant	Back up for emergency generators	N/A
Diesel Fuel	1,500-gallon AST	Central Plant	Back up for emergency generators	N/A
Water Treatment Chemicals	One, 55-gallon drum	Central Plant chemical storage bermed area	Chillers	Off-site, licensed contractor (Balfor Disposal)

Hazardous Substances and/or Petroleum Products Noted Onsite

Substance	Container Size	Location	Nature of Use	Disposal Method
Coolant (glycol)	Two, 55-gallon drums	Central Plant chemical storage bermed area	Mechanical systems	Off-site, licensed contractor
Waste Oil	One 30-gallon container	Central Plant chemical storage bermed area	Mechanical systems	Off-site, licensed contractor (Balfor Disposal)
Turbine Engine Oil	One, 55-gallon drum	Central Plant chemical storage bermed area	Mechanical systems	Off-site, licensed contractor (Balfor Disposal)
Water Treatment Chemicals	Ten, 5-gallon containers	Central Plant chemical storage bermed area	Mechanical systems	Off-site, licensed contractor (Balfor Disposal)
Used Glycol	One, 55-gallon drum	Central Plant chemical storage bermed area	Mechanical systems	Off-site, licensed contractor (Balfor Disposal)
Oil	Six, 5-gallon containers	Central Plant chemical storage bermed area	Mechanical systems	Off-site, licensed contractor (Balfor Disposal)
Used batteries	Several	Central Plant chemical storage bermed area	Mechanical systems	Off-site, licensed contractor, Viola Environmental Services
Sulfuric Acid	300-gallon AST	Central Plant area	Mechanical systems	Off-site, licensed contractor, Viola Environmental Services

The materials were found to be properly labeled and stored at the time of the assessment with no signs of leaks, stains, or spills. Secondary containment is provided in the form of a bermed area for hazardous material storage. Stringent housekeeping practices were observed in the Central Plant mechanical areas. No spills, leaks, or evidence of releases was observed. Based on the nature of use, overall small quantities observed, presence of secondary containment, and lack of violations on-file with the local agencies, these materials are not expected to represent a significant environmental concern.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current USTs was observed during the site reconnaissance.

Partner observed two aboveground storage tanks (ASTs) for the storage of diesel fuel on the subject property. The ASTs are located on the central plant area of the subject property. The ASTs were installed in 1994 and are equipped with secondary containment and electronic leak detection systems that are

monitored by trained personnel. No staining, leaks or spills were noted in the vicinity of the ASTs, and no releases have been reported. In addition, a 300-gallon sulfuric acid AST was observed inside a secondary containment in the central plant area. No staining was observed in the vicinity of this AST.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – “*Non-PCB;*” 2) 50 ppm-500 ppm – “*PCB-Contaminated;*” and, 3) Greater than 500 ppm – “*PCB-Containing.*” The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. One locked transformer room was observed in the service building that was reported to house two pad-mounted transformers. This room is only accessible by SCE authorized personnel. Partner contacted a customer service representative of SCE, who confirmed their ownership and operational responsibility for the transformers and that the units do not contain PCBs. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Seven hydraulic elevators are present at the subject property that is routinely maintained by ThyssenKrupp Company. No stains or releases were observed inside the concrete-paved flooring of the elevator machine rooms. Based on the good condition and expected age of the equipment (1981 or newer), the elevators are not expected to represent a significant environmental concern.

A trash compactor is present at the subject property that contains hydraulic oil. No stains were observed in the vicinity of the trash compactor. Based on the good condition and expected age of the equipment (1981 or newer), the trash compactor is not expected to represent a significant environmental concern.

Additionally, no other potential PCB-containing equipment (interior transformers, oil-filled switches, hoists, lifts, dock levelers, balers, etc.) was observed on the subject property during Partner’s reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property buildings were constructed in 1981 and 1983. Partner has conducted a limited, visual evaluation of accessible areas for the presence of suspect ACMs at the subject property. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Please refer to the table below for identified suspect ACMs:

Suspect ACMs			
Suspect ACM	Location	Friable Yes/No	Physical Condition
Drywall Systems	Throughout Building Interior	No	Good
Floor Tiles	Portion of Building Interior	No	Good
Floor Tile Mastic	Portion of Building Interior	No	Good
Ceiling Tiles	Throughout Building Interior	No	Good

The limited visual survey consisted of noting observable materials (materials which were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the User an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or

PACM are present at the subject property. Additional sampling, assessment, and evaluation will be warranted for any other use.

According to the US EPA, ACM and PACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

6.3.2 Lead-Based Paint (LBP)

Due to the commercial nature of use of the subject property, ACMs were not considered within the scope of this assessment.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	Average Predicted Radon Levels	Potential
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Brea Department of Water serves the subject property vicinity. According to a representative of the City, shallow groundwater beneath the subject property is not utilized for domestic purposes. Water sources for the City of Brea are surface water from the Colorado River and State Water Project, which draws water from the Sacramento-San Joaquin River Delta, and groundwater from Cal Domestic which originates from the Main San Gabriel groundwater basin. According to the City of Brea and the 2014 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property buildings for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Two 48,000-gallon capacity diesel fuel underground storage tanks (USTs) were formerly located at the subject property. The diesel fuel USTs supplied backup fuel for the facility operations. The USTs were removed in February 1995 under the supervision of the Orange County Health Care Agency (OCHCA). The tank pit was over-excavated and confirmatory soil samples were taken and analyzed for the presence of total petroleum hydrocarbons (TPH) including benzene, toluene, ethylbenzene and total xylenes (BTEX). No TPH or BTEX were detected in the confirmatory samples. Subsequently, the OCHCA granted closure in September 6, 1995 and did not require any further action. A copy of the NFA letter is included in Appendix B of this report. Based on the removal of the tanks, the analytical results, and the regulatory closure, the former USTs are considered a historical recognized environmental condition and no further action is considered necessary.
- One 4,000-gallon secondary containment transformer oil UST was located adjacent to the northeast corner of the subject property building. This UST was formerly connected to a power transformer and was designed to act as secondary containment in the event of a release from the transformer. Southern California Edison (SCE) owned the transformer and assumed responsibility for any releases. According to Mr. Eddie Cordero, the subject property building engineer, the UST

had never been used and was abandoned in place in 1999. As the location of this tank was in close proximity to the former 48,000-gallon capacity USTs and soil samples from the area did not indicate any subsurface contamination, there is a low potential for a release from this former UST. Based on the in-place abandonment of the UST, reported non-use of the UST in the past, and the analytical results from the removal of the adjacent USTs, this former UST is considered a historical recognized environmental condition and no further action is considered necessary.

- A clarifier was formerly used in connection with micrographic operation in which microfiches were formerly developed at the subject property. The clarifier had been connected to the floor drain in this area. According to Mr. Cordero, building engineer, the floor drain was filled with concrete and covered in 1994. The clarifier was reportedly closed under OCHCA's supervision. Soil sampling in the vicinity of the clarifier did not indicate any residual contamination and the clarifier pit was backfilled. Based on the nature of the former use of this clarifier, abandonment of the clarifier and associated floor drain, and reported analytical results, this former clarifier is considered a historical recognized environmental condition, and no further action is considered necessary.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Due to the age of the subject property buildings, there is a potential that ACM is present. Overall, all suspect ACMs were observed in good condition and do not pose a health and safety concern to the occupants of the subject property at this time. Should these materials be replaced, the identified suspect ACMs would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 275 S. Valencia Avenue in the City of Brea, Orange County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- An O&M Program should be implemented in order to safely manage the suspect ACMs located at the subject property.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 275 S. Valencia Avenue in the City of Brea, Orange County, California in general conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Partner Engineering and Science, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Subject: Remedial Action Completion Certification

Re: * Underground Storage Tank (UST) Case
Former Security Data Processing Center
275 South Valencia Ave.
Brea, California 92621 *714 533-4470*
O.C.H.C.A. Case #95UT40

Dear Mr. Schovanec:

This letter confirms the completion of site investigation and remedial action for the underground storage tanks formerly located at the above-described location. Enclosed is the Case Closure Summary regarding the above-referenced site for your records.

Based upon the available information, including the current land use, and with the provision that the information provided to this Agency was accurate and representative of site conditions, no further action related to the underground storage tank release is required.

This notice is issued pursuant to a regulation contained in Title 23, California Code of Regulations, Division 3, Chapter 16, Section 2721(e).

Please telephone Seth J. Daugherty at (714) 667-3712 if you have any questions regarding this matter.

Sincerely,

Robert E. Merryman

1.0 INTRODUCTION

SECOR International, Incorporated (*SECOR*) was contracted by Pacific Southwest Realty c/o Bank of America on December 8, 1994, to provide environmental oversight during the removal of two underground storage tanks (USTs) and the associated piping at the former Security Pacific Data Processing Center located at 275 South Valencia Avenue, Brea, California (Figures 1, 2, and 3). Between February 16, 1995 and April 4, 1995 UST removal activities, remedial excavations, backfilling and grading operations, and facility restoration activities were conducted and completed. This report documents the removal of the USTs and subsequent remedial excavations, discusses field methodology, and presents the findings of this work.

2.0 SITE SETTING

The subject property is located in a commercial area at the northwest corner of the intersection of Valencia Avenue and Nasa Street, due east of Surveyor Avenue, in Brea, California. The subject property covers approximately one city block and consists of a single 685,000-square foot building and associated parking and landscaping areas. The building is equipped with a co-generation plant which utilized two 48,000-gallon, fiberglass, diesel USTs used as a back-up fuel source. The operations of the co-generation plant were terminated in February 1994.

The site is currently unoccupied and is undergoing divestiture.

3.0 SITE BACKGROUND

- In June 1994, a Phase I Environmental Assessment was conducted by *SECOR* at the former Security Pacific Data Processing Center. The Phase I assessment revealed that a reported spill of approximately 47 gallons of diesel had occurred during pressure testing activities conducted by Converse Environmental West (*SECOR*, 1994).
- Between July 11 and 19, 1994, *SECOR* conducted a Phase II site assessment in the vicinity of two diesel 48,000-gallon fiberglass USTs. Four soil borings (B-1, B-2, B-3, and B-4) and one hand auger boring (HA-1) were advanced around the perimeter of the USTs. The soil borings were advanced up to a total depth (TD) of 40 feet below ground surface (bgs). No groundwater was encountered. The laboratory analytical data reported that elevated concentrations of total petroleum hydrocarbons characterized as diesel (TPHd) were present in the soil samples collected in HA-1. The laboratory analytical data indicated TPHd concentrations of 9,300 and 100 milligrams per kilogram (mg/kg) in the soil samples collected 1 foot and 6 feet bgs, respectively. No detectable concentrations of TPHd were detected at or above the laboratory method detection limit (MDL) in all other soil samples collected from the perimeter of the USTs. The extent of the reported diesel spill was determined to be limited to the near surface (less than 3 feet bgs) in the vicinity of the southern UST (*SECOR*, 1994).

4.0 GEOLOGICAL AND HYDROGEOLOGICAL SETTING

4.1 Regional Geology and Hydrogeology

The site, located in the City of Brea, California, is bordered by the East Coyote Hills to the southwest, the Puente Hills to the northwest, and the Chino Hills to the northeast. The Puente/Chino Hills are a west trending anticline bordered on the south by the Whittier Fault Zone. The trace of the fault zone is located approximately 0.75 of a mile northeast of the site. The northwest/southwest trending East Coyote Oil Field extends from approximately 1 mile southwest of the site to 1.5 miles southeast of the site. The Puente/Chino Hills are composed primarily of the Miocene Age Puente Formation which consists of micaceous shale, siltstone, sandstone and pebble conglomerate (Yerkes, 1972).

The site is underlain by Quaternary Age, up-lifted, non-marine terrace deposits formed on the southern slope of the Puente/Chino Hills. These sediments are composed of a heterogeneous mixture of clay, silt, sands, and gravels and are typical of paleo-stream valley sedimentary deposits.

The site is located on the northern edge of the forebay area of the Anaheim Groundwater Basin. The Anaheim Groundwater Basin is part of the Orange County Coastal Plain Groundwater Basin. The Anaheim Groundwater Basin is a coastal synclinal basin with a forebay and a pressure area. The forebay area lies northeast of a line that roughly coincides with the Santa Ana Freeway. Surface waters can percolate freely to the water table in the forebay area. Seaward of this line, groundwater occurs under artesian pressure in aquifers which are interbedded with sediments of low permeability. Percolation of surface waters to aquifers in the pressure area is greatly restricted due to the underlying confining layers (DWR, 1966).

Within the upper stratigraphic section, two major aquifers have been identified. These are the Talbert Aquifer, which occurs within approximately 200 feet of the surface, and the Main Aquifer, which generally occurs between elevations of -500 to -200 feet. Overlying these deep aquifer zones is a shallow water bearing zone occurring within recent alluvium and stream deposits. Water in this zone is of limited use owing to poor water quality and low yields, typically less than 25 gpm. This zone is generally termed the "perched" or "semiperched" ground water and has limited hydraulic continuity with deeper aquifers (Robbins, 1986).

4.2 Site Geology and Hydrogeology

The site lies within a topographic low created by the former Loftus Creek which is now referred to as the Loftus Channel. The site is located at an elevation of approximately 400 feet above mean sea level (AMSL) with surface drainage directed toward the southeast. Information obtained during the excavation of the USTs and previous soil borings advanced on site, indicates that underlying sediment consists primarily of clays with medium to high plasticity and varying degrees of silt from surface grade to approximately 20 feet bgs. From 20 feet bgs to 40 feet (total depth drilled) bgs, the lithology changes to interbedded poorly graded sands and silty clays.

No groundwater was encountered within the soil borings advanced on site to a total drilled depth of 40 feet bgs. According to West Hazmat Drilling Corporation's depth to groundwater records for the City of Brea, the depth to groundwater at 2767 Imperial Highway (located approximately 1 mile southeast of the subject property) is 95 feet bgs. Due to the close proximity between the subject property and Imperial Highway, it is reasonable to assume that depth to groundwater beneath the subject property is in excess of 50 feet bgs.

5.0 SUMMARY OF UST EXCAVATION

Between November 4, 1994 and April 3, 1995, two 48,000-gallon, single walled fiberglass, diesel USTs were excavated and removed under the direction of *SECOR* personnel. Inspector Karyn Vaudreuil with the City of Brea Fire Department (CBFD), and Mr. Jason Lew with the Orange County Health Care Agency (OCHCA) were on site to observe and document the UST removal operation and subsequent soil sampling activities. All necessary permits were obtained and a subsurface utility clearance was conducted prior to commencing with the field activities.

5.1 Geophysical Investigation

Prior to conducting the UST removal operation, a geophysical survey was conducted to determine the surface trace of the USTs, associated UST piping, and subsurface utilities that may be encountered during the UST removal operation. The geophysical investigation was conducted by Spectrum E.S.I. on November 4, 1994. Spectrum E.S.I. employed remote sensing techniques which included terrain conductivity meters in both active and passive modes, and ground penetrating radar. All detectable subsurface utilities were delineated on the ground surface with spray paint and/or stakes with survey ribbon. A scaled map was generated in the field referencing fixed cultural features (e.g., buildings and sidewalks). The geophysical survey determined the locations of the following subsurface utilities: a high pressure fire suppression conduit, two high pressure water conduits, high voltage electrical, and the associated UST piping (Figure 3).

5.2 Rule 1166 Contaminated Soil Mitigation Monitoring

In accordance with the South Coast Air Quality Management District (SCAQMD) Rule 1166 Contaminated Soil Mitigation Plan, volatile organic compounds (VOC) levels were monitored during excavation operations. *SECOR* personnel monitored VOC concentrations 3 inches above the excavated soil with a photo-ionization detector (PID) calibrated to hexane (50 parts per million [ppm]) in order to segregate and stockpile hydrocarbon-impacted soil from non-hydrocarbon-impacted soil during excavation activities. The PID readings taken during excavation activities are included on the 1166 monitoring records in Appendix A. As a precaution, all soil stockpiled on site was covered with plastic sheeting to reduce VOC emissions.

5.3 Engineered Shoring Installation

On February 16, 1995, American Cason was mobilized on site to install shoring between the western edge of the two diesel USTs and the subsurface utilities detected during the geophysical survey (Figure 3). The initial shoring design consisted of 20-foot I-beams with interlocking trench plates. Prior to drilling the bucket auger holes which would encase the I-beams, a back-hoe operated by A. E. Schmidt, was used to excavate observation trenches (i.e., "pot hole") in order to locate and avoid the subsurface utilities. Excavation of the subsurface utilities revealed that the high pressure fire suppression and water lines were installed overlying the UST pea gravel back-fill, having an angle of repose of approximately 45 degrees. The eastern water line was installed within 2 feet of the UST ends and laterally reinforced with tie-rods (anchor rods) to provide tension restraint. The initial shoring design was determined to be inadequate because the advancement of the bucket auger would remove the pea gravel back-fill which was supporting the tie-rods and thus jeopardize the integrity of the utilities.

Between February 21 and 22, 1995, C.B.I. Shoring was mobilized on site to install 80 feet of engineered shoring between the western edge of the USTs and the identified subsurface utilities. The shoring design consisted of 1-inch thick by 30 feet long interlocking trench plates. The trench plates were installed with

a crane equipped with a pile-driver which pounded and vibrated the steel plates approximately 11 feet below the tank inverts or 26 feet bgs (Figure 3).

On February 23, 1995, Mr. Joseph C. Smyth, a Registered Civil Engineer with C.B.I. Shoring, arrived on site to analyze the shoring design to confirm its structural integrity. Mr. Smyth conducted field calculations to determine the opposing and resisting forces exerted on the engineered shoring and subsurface sediments. He confirmed the shoring was adequately designed to withstand the opposing geotechnical forces. After confirmation, tank removal activities resumed. The engineering calculations are included in Appendix B.

5.4 UST Pit Dewatering Operations

During the removal of the pea gravel back-fill which encompassed the USTs, surface infiltrated water was identified in the UST excavation. Surface infiltrated water appeared to have migrated to the UST excavation because of density contrasts between the pea gravel back-fill and the native clay soil. As a result of the density contrast, the excavation responded as a "water magnet" collecting infiltrated precipitation and landscape irrigation. In addition, the same "water magnet" effect was identified in the subsurface utility excavation which also contained water in the pea gravel back-fill.

Between February 17, 1995 and March 8, 1995, Nieto & Sons, Inc. extracted approximately 31,810 gallons of water from the UST and associated piping excavations with vacuum trucks. The water was transported as non-hazardous waste by Nieto & Sons to Demenno-Kerdoon in Compton, California, for recycling. Copies of the water disposal documents are included in Appendix C.

Following dewatering of the pit, no additional recharge was observed.

5.5 UST Associated Piping Removal

Between February 17, 1995 and February 21, 1995, the vent, product, and remote fill lines were removed. A copy of the piping disposal certification is included in Appendix D. Prior to removal, the vent, product, and remote fill lines were back-flushed with water into the USTs. The collected water in the USTs was removed during the triple rinsing operation. Because of interference with the placement of the UST-associated lines and the shoring to be installed, the UST-associated lines were removed in conjunction with the shoring installation. Approval of the removal of the UST-associated lines prior to the removal of the USTs was granted by Inspector Karyn Vaudreuil with the Cbfd. The soil excavated from the product line locations was placed back into the product line trench in order to help ensure structural integrity of the shoring and the water lines, while the pea gravel was being removed from the UST excavation.

5.6 UST Removal

On February 27, 1995, the two 48,000-gallon single walled fiberglass USTs were removed from the excavation and crushed on site under Cbfd Permit No. P046 and the OCHCA Plan No. 95-014. Copies of the permits are included in Appendix E. Herein, the USTs are designated UST-T1 (northern tank) and UST-T2 (southern tank). The former locations of the removed USTs are depicted on Figures 2 through 5.

Prior to removal, the USTs were tripled rinsed by Nieto & Sons, Inc. and rendered inert in accordance with SCAQMD Rule 1149. The USTs were then certified as non-hazardous by a marine chemist with CTL Environmental Services who painted certification numbers on the USTs. A copy of the marine chemist's certification is attached as Appendix F. All rinsewater was removed from the USTs and transported by Nieto & Sons, Inc., under hazardous waste manifest No. 95165025, to Demenno-Kerdoon for recycling. A copy of the hazardous waste manifest is included in Appendix G.

Upon removal, the USTs were inspected for structural integrity and were determined to be in good condition with no evidence of holes, cracks, pits, leaks or stains. No Underwriter Laboratory (UL) numbers were identified on the USTs. The two USTs were removed from the excavation by a crane operated by Clark Crane, Inc., and placed on the adjacent access street. The USTs were then crushed in place with an excavator and loaded into steel roll-off bins. The roll-off bins were transported by Erickson to Miliken Landfill, located at 2050 S. Miliken Avenue, Ontario, California for recycling. Photographs of the UST removal are included in Appendix H.

On February 27, 1995, the UST excavation measured approximately 50 feet wide by 65 feet long by 15 feet deep with a sidewall slope of 1 foot horizontal to 1 foot vertical (1H:1V). The removed USTs were anchored with fiberglass hold-down straps to a continuous pour "dead man" which was constructed of 18 inches of reinforced concrete which lined the bottom of the excavation. After removal of all the pea gravel back-fill from the excavation, the concrete "deadman" was inspected for structural integrity and was determined to be in good shape with no cracks. No visual evidence of hydrocarbon staining was identified in the UST pit area. A total of approximately 1,732 cubic yards (2,598 tons) of soil and pea gravel were removed from the UST excavation and segregated into non-hydrocarbon and hydrocarbon-impacted stockpiles.

All pea gravel and suspected hydrocarbon-impacted soil (approximately 866 cubic yards, 1,300 tons) was placed in Stockpile 1 located east of the former UST-T1. All anticipated non-hydrocarbon impacted soil with minor amounts of pea gravel (865 cubic yards, 1,298 tons) were placed in Stockpile 2 east of UST-T2 (Figure 3). The pea gravel was placed with the hydrocarbon-impacted soil because it appeared to be impacted with diesel, possibly from overspill at the UST fill ports.

6.0 UST EXCAVATION SOIL SAMPLING AND ANALYSES

Standard practices for sampling, as outlined in EPA Publication SW-846, were adhered to during soil sampling. Each sample was placed in either a glass jar or brass tube leaving no head space, closed with Teflon liners and plastic caps, and sealed in Zip-Lock bags. The collected soil samples were immediately packed in ice and transferred under the appropriate chain-of-custody protocol to a California state-certified laboratory for analyses. All soil samples submitted for laboratory analyses were placed on a 24-hour priority rush to reduce the safety concerns associated to the open UST pit.

6.1 UST Excavation Soil Sample Analyses

On February 27, 1995, following removal of the USTs, *SECOR* personnel collected soil samples from the perimeter of the continuous pour concrete "deadman" which lined the bottom of the excavation. A general consensus was reached in the field between *SECOR* personnel, Inspector Karyn Vaudreuil with the Cbfd, and Mr. Jason Lew with the OCHCA that representative soil samples would be obtained along the perimeter of the concrete "deadman." It was assumed that the highest concentrations of hydrocarbon-impacted soil, if present, would be detected in this area. All soil sampling was done under the direction of Jason Lew with the OCHCA.

Soil sample labelling is as follows: T1E-21, indicating UST #1, east end, and 21 feet bgs.

Ten soil samples were collected approximately 2 to 4 feet below the perimeter of the concrete "deadman" (Figure 3). Two samples (T1EW-21 and T2EW-21) were collected on the east end of the UST excavation. Three samples (T1E-21, T1C-21, and TIW-21) were collected along the north end of the excavation, adjacent to the former UST-T1. Three samples (T2E-21, T2C-21, and T2W-21) were collected along the south end of the excavation, adjacent to the former UST-T2. Because the installed shoring abutted the west end of the concrete "deadman," soil samples could not be collected from the west end of the UST excavation. However, two soil samples (T1WW-21 and T2WW-21) were collected at the northwest and southwest corners of the excavation adjacent to the west end of UST-T1 and UST-T2.

Soil samples from the UST excavation were submitted for analyses of TPHd and benzene, toluene, ethylbenzene, and xylene (BTEX) by the Department of Health Services (DHS) modified EPA Method 8015m as diesel and EPA Method 8020, respectively.

7.0 UST SOIL SAMPLE ANALYTICAL RESULTS

No detectable concentrations of BTEX were reported above the laboratory method detection limits (MDL) in any of the soil samples collected from the UST excavation. Detectable concentrations of TPHd were reported in 3 of 10 samples submitted for laboratory analyses. Soil samples T1C-21, T1W-21, and T2WW-21 had TPHd concentrations of 270 mg/kg, 15 mg/kg, and 25 mg/kg, respectively. The laboratory reports and chain-of-custody documents are enclosed in Appendix I and the analytical results are summarized in Table 1.

8.0 UST REMEDIAL EXCAVATION

On March 1, 1995, a remedial excavation was conducted in the UST excavation to remove the diesel-impacted soil from the area where soil sample T1C-21 was collected. The laboratory analytical data for soil sample T1C-21 indicated a TPHd concentration of 270 mg/kg. According to the California State LUFT Manual, an acceptable concentration of TPHd which could be left in place would be 100 mg/kg or less. Therefore, further excavation was determined to be necessary only in the area of TIC-21.

The soil in the area where soil sample T1C-21 was collected was excavated approximately 4 feet beneath the location of T1C-21 to a total depth of 25 feet bgs. The remedial excavation had surface dimensions of 6 feet wide by 15 feet long by 4 feet deep. Approximately 13 cubic yards (20 tons) of soil were removed from this location and placed in Stockpile 3 (Figure 3). Following the excavation visual inspection of the remedial excavation revealed no evidence of diesel-impacted soil.

8.1 UST Remedial Excavation Soil Sample Analyses

Following the UST remedial excavation, two soil samples (GS-9 and GS-10) were collected directly beneath the location of soil sample T1C-21 at a depth of approximately 25 feet bgs. The soil samples were submitted for laboratory analyses of TPHd and BTEX by EPA Methods 8015m as diesel and 8020, respectively.

8.2 UST Remedial Excavation Analytical Results

No detectable concentrations of TPHd and/or BTEX were identified in soil samples GS-9 and GS-10 (Table 1).

9.0 SUBSURFACE UTILITY REMEDIAL EXCAVATION

During excavation and removal of the UST piping, visual evidence of diesel impacted back-fill material (sand/pea gravel) was identified in the areas of the subsurface utilities and UST associated lines (i.e., product lines and remote fill lines). A small leak was encountered at the 90 degree elbow located on the product line leading into UST-T1. The 90 degree elbow was located adjacent to the center of UST-T1 in the utilities/UST-associated lines trench. The diesel overspill/leak appeared to have migrated within the utilities trenches. The diesel-impacted soil was limited to the back-filled trenches because the surrounding native soil types were predominately clays with a high plasticity and low permeability. The remedial excavation of the line area was conducted in three phases (Phase One through Phase Three) and was dictated by the 24-hour turn around for laboratory analyses.

9.1 Phase One Remedial Excavation

The Phase One remedial excavation was conducted between February 23, 1995 and February 27, 1995. During this excavation *SECOR* personnel directed the removal of approximately 200 cubic yards (300 tons) of soil from around the subsurface utilities west of the former USTs. The remedial excavation started approximately 8 feet west of the shoring wall to ensure that the high pressure fire suppression and water lines would not be damaged. This area was later excavated during Phase Three remedial excavation. The Phase One remedial excavation had surface dimensions of approximately 12 feet wide by 70 feet long by 6 feet deep. All soil removed from the excavation was placed in Stockpile 3 (Figure 3). Visual inspection of the side walls revealed that diesel-impacted soil was still present in the subsurface utility trenches along the western wall (This area was later excavated as discussed in this Phase Two Remedial Excavation).

9.2 Phase One Remedial Excavation Soil Sample Analyses

Seven soil samples (GS2-6, GS3-6, GS4-6, GS5-6, GS6-6, GS7-7, and GS8-8) were collected from the bottom of the Phase One excavation on February 27, 1995 (Figures 3, 4, and 5). In addition, one soil sample (GS1-3) was collected at approximately 3 feet bgs in the area of where the vent lines exited the building to determine if a remedial excavation should be conducted in this area. The collected soil samples were submitted for laboratory analyses of TPHd and BTEX by EPA Methods 8015m as diesel and 8020, respectively.

9.3 Phase One Remedial Excavation Analytical Results

No detectable concentrations of BTEX were identified in the soil samples collected from the Phase One remedial excavation. Soil samples GS2-6, GS3-6, and GS6-6 contained concentrations of TPHd of 12 mg/kg, 14 mg/kg and 550 mg/kg, respectively (Table 2).

No detectable concentrations of BTEX were identified in soil sample GS1-3. The laboratory analytical data for soil sample GS1-3 indicated a TPHd concentration of 1,100 mg/kg, indicating further remedial excavation would be necessary in the vicinity of the vent and high pressure water lines (Table 2).

9.4 Phase Two Remedial Excavation

Between February 28, 1995 and March 7, 1995, a Phase Two remedial excavation was conducted west of the Phase One excavation, beneath Stockpile 3. Based upon visual evidence of diesel-impacted soil within the subsurface utility trenches on the west wall of the Phase One excavation, as stated in Section (9.1), in conjunction with the TPHd concentration of 550 mg/kg identified in soil sample GS6-6, necessitated the additional soil removal. In order to advance the Phase Two excavation, Stockpile 3 was moved to the parking area north of the site. Herein, Stockpile 3 will be designated as Stockpile 4.

The Phase Two remedial excavation extended west from soil sample GS6-6. All soil was removed from the vicinity of soil sample GS6-6 to a depth of approximately 12 feet bgs. The Phase Two remedial excavation had surface dimensions of approximately 70 feet long by 9 feet wide by 12 feet deep. The Phase Two excavation was extended an additional 9 feet west adjacent to the building and the pea gravel back-fill of another empty 4,000-gallon UST. The 4,000-gallon UST is presently used for secondary containment for the Edison transformers inside the building. Currently, no leaks have been reported (i.e. the secondary recovery UST is empty). This secondary containment UST was not removed. After completion of the Phase Two remedial excavation, no visual evidence of diesel-impacted soil was identified. Approximately 320 cubic yards (480 tons) of soil was removed from the Phase Two excavation and placed in Stockpile 4.

The final combined surface dimensions for both the Phase One and Phase Two remedial excavations were 21 feet wide by 70 feet long by 12 feet deep (Figures 4 and 5). A total of approximately 620 cubic yards (930 tons) of soil was excavated from the Phase One and Two remedial excavations. All soil excavated during the Phase One and Two remedial excavations was placed in Stockpile 4.

9.5 Phase Two Remedial Excavation Soil Sample Analyses

Seven soil samples (GS9-12, GS10-12, GS11-12, GS12-12, GS13-12, GS14-12, and GS15-12) were collected following the Phase Two remedial excavation from the bottom of the respective excavation. The collected soil samples were submitted for laboratory analyses of TPHd and BTEX by EPA Methods 8015m as diesel and 8020, respectively. In addition, one soil sample, GS-00, was collected from the pea gravel back-fill material of the 4,000-gallon secondary containment UST. Soil sample GS-00 was analyzed for total recoverable petroleum hydrocarbons (TRPH), TPHd, BTEX, and polychlorinated biphenals (PCBs) by EPA Methods 418.1, 8015m, 8020 and 8080.

9.6 Phase Two Remedial Excavation Analytical Results

No detectable concentrations of TPHd and/or BTEX were identified in the analyzed soil samples (Table 2). A TRPH concentration of 8.5 mg/kg was reported in soil sample GS-00. No detectable concentrations of PCBs were identified in this sample. Table 3 summarizes the analytical results for soil sample GS-00.

9.7 Phase Three Remedial Excavation

Between March 7 and 9, 1995, a Phase Three remedial excavation was conducted between the Phase One excavation and the former location of the USTs. The Phase Three excavation was conducted in the vicinity of the high pressure fire suppression and water lines and along the northeast side of the building. The Phase Three excavation was completed in three increments due to concerns related to exposure of the high pressure lines. Each incremental excavation was 5 feet wide by 20 feet long by 6 feet deep. After each section of soil was removed, a soil sample was collected from the base of the respective

excavation. After the first increment was completed, Mr. Cooper, a Registered Civil Engineer, inspected the exposed high pressure fire suppression and water lines for structural integrity. Mr. Cooper indicated the tie rods (anchor rods) connected to the high pressure water line provided adequate tension restraint and were in satisfactory condition and functional. Mr. Cooper indicated that the excavation should be conducted in 20-foot increments exposing a maximum of one joint at a time so as not to jeopardize the integrity of the high pressure lines. A copy of Mr. Cooper's field report is included in Appendix J. The first 20-foot increment included the removal of soil from the vicinity of soil sample GS1-3 to a depth of approximately 6 feet bgs.

The Phase Three remedial excavation also included the removal of soil adjacent to the planter and building to a depth of 6 feet bgs because of the residual near surface diesel-impacted soil identified in the Phase Two remedial excavation (Figures 4 and 5). After completion of the Phase Three remedial excavation, no visual evidence of diesel-impacted soil was identified. Approximately 133 cubic yards (200 tons) of soil was removed from the Phase Three remedial excavation and placed in Stockpile 4.

9.8 Phase Three Remedial Excavation Soil Sample Analyses

Three soil samples (GS16-12, GS17-6, and GS18-6) were collected from the bottom of the Phase Three remedial excavation. Soil sample GS16-12 was collected 12 feet bgs, directly beneath soil sample GS1-3. Soil sample GS16-12 was collected in order to verify that all diesel-impacted soil in the area of GS1-3 was completely removed. The collected soil samples were submitted for laboratory analyses of TPHd and BTEX by EPA Methods 8015m as diesel and 8020, respectively.

9.9 Phase Three Remedial Excavation Analytical Results

No detectable concentrations of TPHd and/or BTEX were identified in the soil samples collected from the Phase Three remedial excavation confirming the completion of the remedial activities (Table 2).

10.0 STOCKPILE CHARACTERIZATION

10.1 Stockpile 1 Soil Sample Analyses

On February 23, 1995, one pea gravel sample (PG-1) was collected from Stockpile 1. Pea gravel sample PG-1 was submitted for analyses of TRPH by EPA Method 418.1 and for volatile organics by EPA Method 8240.

No detectable concentrations of volatile organic compounds were identified in soil sample PG-1 above the laboratory MDLs. The laboratory analytical data indicated a TRPH concentration of 650 mg/kg in pea gravel sample PG-1. The analytical results for Stockpile 1 are summarized in Table 4.

10.2 Stockpile 2 Soil Sample Analyses

On February 27, 1995, 11 soil samples (SP-1 through SP-11) were collected from Stockpile 2. One sample was collected for every 100 cubic yards of excavated soil. Soil samples SP-1 through SP-11 were collected under the direction of Mr. Jason Lew with the OCHCA. Soil samples SP-1 through SP-11 were submitted for laboratory analyses of TPHd and BTEX by EPA Methods 8015m as diesel and 8020, respectively.

Also on March 7, 1995, personnel from Orange County Integrated Waste Management (OCIWM) Brea Landfill inspected the stockpile for disposal. Personnel from OCIWM requested and supervised the collection of three additional soil samples (SP-17, SP-18, and SP-19). Soil samples SP-17 through SP-19 were submitted for laboratory analyses of TPHd and BTEX by EPA Methods 8015m as diesel and 8020, respectively.

No detectable concentrations of BTEX were reported above the laboratory MDLs for the 11 soil samples collected from Stockpile 2. Detectable concentrations of TPHd were reported in all soil samples submitted for laboratory analyses. TPHd concentrations ranged from 11 mg/kg to 2,100 mg/kg (Table 5).

10.3 Stockpile 3 Soil Sample Analyses

On February 27, 1995, five soil samples (SP-12 through SP-16) were collected from Stockpile 3 for disposal characterization. Soil samples SP-12 through SP-16 were submitted for laboratory analyses of TPHd and BTEX by EPA Methods 8015m as diesel and 8020, respectively.

No detectable concentrations of BTEX were identified in the soil samples collected from Stockpile 3. All soil samples collected from Stockpile 3 contained detectable concentrations of TPHd. The TPHd concentrations ranged from 100 mg/kg to 2,500 mg/kg (Table 5).

12.0 EXCAVATION BACK-FILL AND COMPACTION

Between March 1 and 9, 1995, the UST and remedial excavations were back-filled with clean imported, compactable soil and pea gravel. The excavations were back-filled to greater than 90 percent compaction using a bulldozer and an excavator equipped with a "sheepfoot." All compaction testing was conducted by Advanced Geotechnical Services, Inc. A copy of the soil compaction report is included in Appendix N.

The 60-foot section of the Phase Three remedial excavation located above the high pressure fire suppression and water lines was back-filled according to the procedures discussed with Mr. T. W. Cooper. The back-fill operation included pea gravel followed by compaction using a bulldozer operated by A. E. Schmidt.

Approximately 875 tons of top soil, 3,826 tons of sand and 80 tons of pea gravel were imported and back-filled in the UST and remedial excavations.

13.0 SUMMARY AND CONCLUSIONS

- Two 48,000-gallon fiberglass diesel USTs were removed on February 27, 1995 during a UST removal operation.
- No BTEX concentrations were reported in any soil samples collected from the UST and remedial excavations.
- Only three of 10 soil samples collected from the UST excavation contained detectable concentrations of TPHd. Of these three samples, one (T1C-21) contained TPHd concentrations of 100 mg/kg. A remedial excavation was conducted in the vicinity T1C-21 and two additional soil samples (GS-9 and GS-10) were collected from the base of the remedial excavation. No detectable concentrations of TPHd were reported in the two soil samples collected.
- Only four soil samples collected from the remedial excavations contained detectable concentrations of TPHd above the laboratory MDLs. The soil in the vicinity of these soil samples was subsequently over-excavated and confirmation samples were collected. No detectable concentrations of TPHd were reported in the confirmation samples.
- All soil/pea gravel removed from the UST and remedial excavations was temporarily placed in stockpiles on site. Following characterization, all excavated soil was transported to Brea Landfill or Landmark Materials to be used for daily cover or feedstock for asphalt manufacturing. Approximately 2,483 cubic yards (3,725 tons) of excavated material was transported off site.
- No groundwater was encountered in the UST and remedial excavations. Groundwater is estimated to be in excess of 50 feet bgs.
- Native soil encountered during the UST and remedial excavation consisted of clay of medium to high plasticity with varying degrees of silt.

14.0 STANDARD LIMITATIONS

The conclusions and recommendations presented above are based upon the agreed upon scope of work outlined in the above report. Consultant makes no warranties or guarantees as to the accuracy or completeness of information obtained from information provided or compiled by others. It is possible that information exists beyond the scope of this investigation. Also, changes in site use may have occurred sometime in the past due to variations in rainfall, temperature, water usage, economic, agricultural or other factors. Additional information which was not found or available to Consultant at the time of writing Report, may result in a modification of the conclusions and recommendations presented. This report is not a legal opinion. The services performed by Consultant have been conducted in a manner consistent with the level of care ordinarily exercised by members of our profession currently practicing under similar conditions. No other warranty expressed or implied is made.

1.0 INTRODUCTION

Science & Engineering Analysis Corporation (SEACOR), has been authorized by Bank of America Environmental Services Department, to perform environmental site assessment activities at the former Security Pacific Data Processing Center located at 275 South Valencia Avenue, Brea, California (Figure 1). The purpose of the assessment activities was to evaluate soil conditions in the vicinity of two 48,000 gallon underground diesel fuel storage tanks and the water clarifier area (Figure 2). The diesel fuel tanks are used for emergency backup for diesel generators supplying electrical power to the facility, and the water clarifier was used in conjunction with the discharge water associated with the microfiche development program. The investigation included drilling of five soil borings, and two hand auger borings. Four of the borings and one hand auger boring (B-1, B-2, B-3, B-4 and HA-1) were advanced around the perimeter of the two underground storage tanks (UST's). Soil boring (CL-1) was advanced at the southwest corner of the water clarifier, and hand auger boring, HA-2, was advanced at the northeast corner of the water clarifier. This report presents the results of the assessment.

2.0 SITE OVERVIEW

2.1 Location

The subject property is located at the northwest corner of the intersection of Valencia Avenue and Nasa Street, due east of Surveyor Avenue, in Brea, California. Figure 1 shows the location of the site.

2.2 Subject Site Description and Current Uses

The subject property covers approximately one city block and consists of a single 685,000-square-foot building and associated asphalt driveways and parking areas. Landscaped areas are scattered throughout the property.

At the time of the assessment, the facility was not in active operation. The building contains office areas and a paint storage room. A portion of the building formerly housed a micrographics operation where microfiche was developed. Also present within the building is a cogeneration plant. The cogeneration plant was shutdown in February 1994; however, it is still in working condition.

2.3 Adjacent Properties

The facility is located in a mostly commercial area with mixed commercial and light industrial businesses in the area. The property is bounded to the south by Nasa Street, to the east by Valencia Avenue, to the north by commercial office buildings and an asphalt parking area, and to the west by Surveyor Street.

3.0 ENVIRONMENTAL SETTING

3.1 Regional Geology

The site is located in the City of Brea, California, between the East Coyote Hills to the southwest the Puente Hills to the northwest and the Chino Hills to the northeast. The Puente/Chino Hills are a west trending anticline bordered on the south by the Whittier Fault Zone. The trace of the fault zone is located approximately 3/4 's of a mile northeast of the site. The northwest/southeast trending East Coyote Oil Field extends from approximately 1 mile southwest of the site to 1.5 miles southeast of the site. The Puente/Chino Hills are composed primarily of the Miocene Age Puente Formation which consists of micaceous shale, siltstone, sandstone and pebble conglomerate (Yerkes, 1972).

The site is underlain by Quaternary Age, up-lifted non-marine terrace deposits formed on the southern slope of the Puente/Chino Hills. These sediments are composed of a heterogeneous mixture of clay, silt, sands and gravels and are typical of paleo-stream valley sedimentary deposits.

3.2 Regional Hydrogeology

The site is located on the northern edge of the forebay area of the Anaheim Ground Water Basin. The Anaheim Ground Water Basin is part of the Orange County Coastal Plain Ground Water Basin. The Anaheim Ground Water Basin is a coastal synclinal basin with a forebay and a pressure area. The forebay area lies northeast of a line that roughly coincides with the Santa Ana Freeway. Surface waters can percolate freely to the water table in the forebay area. Seaward of this line, ground water occurs under artesian pressure in aquifers which are interbedded with sediments of low permeability. Percolation of surface waters to the aquifers in the pressure area is greatly restricted due to the underlying confining layers (DWR, 1966).

Within the upper stratigraphic section, two major aquifers have been identified. These are the Talbert Aquifer, which occurs within approximately 200 feet of the surface, and the Main Aquifer, which generally occurs between elevations of -500 to -200 feet. Overlying these deep aquifer zones is a shallow water zone occurring within recent alluvium and stream deposits. Water in this zone is of limited use owing to low yields, typically less than 25 gpm and poor water quality. This zone is generally termed the "perched" or "semiperched" ground water and has limited hydraulic continuity with deeper aquifers (Robbins, 1986).

Depth to ground water varies from approximately 85 feet in the northeastern portion of the basin to approximately 4 feet near the coast. West of the Santa Ana River, the ground water gradient is generally to the west and southwest (Robbins, 1986).

3.3 Site Geology

Data obtained during the course of this investigation indicates that the sediments underlying the site consist of two separate zones. The upper zone consists of a silty clay. The silty clay zone extends from ground surface to approximately 20 feet bgs. At approximately 20 feet bgs a silty sand interface was encountered. The silty sand zone extended from the 20 foot interface to the termination depth of the boring at 40 feet.

3.4 Site Hydrogeology

During the course of the phase II environmental assessment, ground water was not encountered. According to West HazMat Drilling Corporation's depth to ground water (DTW) records for the City of Brea, the DTW at 2767 Imperial Highway is 95 feet bgs. Due to the close proximity between the subject property and 2767 Imperial Highway, a representative value for the DTW appears to be between 40 and 95 feet bgs.

4.0 FIELD INVESTIGATION

4.1 Soil Boring

On July 11, 1994, and July 19, 1994 SEACOR conducted site assessment activities in accordance with the scope of work described in the work plan prepared by SEACOR, dated July 6, 1994. On July 11, 1994 soil borings B-1 and CL-1 were advanced to a total depth of 35 feet bgs and 20 feet bgs, respectively. Soil boring B-1 was drilled on the west end of the northern 48,000 gallon diesel UST, approximately 8 feet from the north side. CL-1 was drilled on the southwest corner of the water clarifier.

On July 19, 1994, three soil borings, (B-2, B-3, and B-4), and two hand augers, (HA-1 and HA-2), were advanced to depths of 40 feet bgs and 6 feet bgs, respectively. Soil borings B-2, B-3, B-4, and HA-1 were drilled around the perimeter of the 48,000 gallon diesel UST's, and HA-1 was drilled in the area of the reported diesel spill near the 48,000 gallon UST's. HA-2 was drilled on the northeast corner of the water clarifier. Each soil boring was backfilled to ground surface with bentonite grout. All drilling was conducted by West Hazmat Drilling Company using a CME 75 truck-mounted, hollow-stem auger drill rig under the direction of a SEACOR registered geologist. The locations of the borings are shown in Figures 3 and 4.

4.2 Soil Sampling

Soil samples were collected at five-foot intervals during drilling of each borehole. Samples were collected according to the SEACOR soil sample protocol (Appendix A) using three 2.5-inch by 6-inch brass sleeves contained within a California-type split spoon sampler. Prior to initiating the sampling, and between uses, the sampler and brass sleeves were washed with a liquinox solution and double-rinsed to reduce the possibility of cross-contamination. One sleeve from each split spoon containing an intact soil sample was prepared and retained for possible submittal to an analytical laboratory. All soil samples were sealed, appropriately labeled, identified on the chain-of-custody, and stored in a chilled container for subsequent analysis. The remaining soil was used for classification according to the Unified Soil Classification System (USCS) and for field screening for volatile organic compounds using a Photo Ionization Detector (PID). Soil classifications, and other pertinent data are recorded on the boring/well construction logs included in Appendix B.

Soil cuttings and decontamination water generated by the drilling and sampling operations were placed in labeled and sealed 55-gallon steel drums and stored on-site pending disposal.

4.3 Soil and Water Sample Analyses

Soil and water samples were transported under chain-of-custody procedures to Fullerton Environmental Laboratory located in Fullerton, California. Fullerton Environmental Laboratory is a California Department of Health Services (CADHS) certified analytical laboratory. Fullerton Environmental Laboratory subcontracted part of the analyses to BC Analytical in Anaheim, California. BC Analytical is certified by the CADHS to perform the requested analyses.

Selected soil samples obtained from borings B-1 through B-4 and HA-1, were analyzed for total petroleum hydrocarbons as diesel (TPHd) by modified EPA method 8015. Each soil sample submitted for analyses from CL-1 and HA-2 were analyzed for volatile organics by modified EPA method 8240 and Title 22 metals. A grab water sample (CL-W) collected from the second stage of the water clarifier was also analyzed for volatile organics by EPA method 8240, and Title 22 metals. Copies of laboratory

reports and chain-of-custody forms are presented in Appendix B. Soil and water analytical results are summarized in Tables 1 and 2.

4.4 Field Observations

The area of investigation was initially limited due to saturated surface soil conditions as a result of the on-site irrigation system. The saturated soil conditions prohibited access with the drill rig. Following the installation of borings B-1 and CL-1 on Monday July 11, 1994, drilling operations were suspended until July 19, 1994, in order for the ground to dry out to allow the entry of a drilling rig.

Drilling activities in the UST vicinity resumed on July 19, 1994. Soil boring, B-2 was advanced to 40 feet bgs. Soil boring B-3 was advanced to 40 feet bgs on the fourth attempt. Pea gravel was encountered in the subsurface during the first three attempts, and the borings were relocated. Soil boring B-4 was also advanced to 40 feet bgs on the fourth attempt. Pea gravel was encountered on the first two attempts, and an abandoned electrical line on the third. Hand auger boring HA-1 and HA-2 were also advanced on July 19th. Samples were collected at 1 foot and 6 feet bgs in HA-1 and at 6.5 feet bgs in HA-2. No borings were located on the northwest side of the UST location due to the presence of a number of subsurface pipes in this area.

5.0 CONCLUSIONS

The laboratory analytical results for soil and groundwater are presented in Tables 1 and 2. The data show that TPHd is present in the samples collected in HA-1 at reported concentrations of 9,300 mg/kg and 100 mg/kg in the one (1) and six (6) foot depth samples, respectively. Eleven Title 22 metals were reported above the laboratory method detection limits in soil samples from HA-2. However, all concentration were below the Total Threshold Limit Concentrations as defined by the California Code of Regulations Title 22 section 66261.24. Metals present in the water sample (CL-W) from the clarifier are below maximum contaminant levels for drinking water standards as defined by the California Department of Health Services. The photo-ionization detector readings varied from 0 to 10 ppm.

6.0 STANDARD LIMITATIONS

All work was performed under the supervision of a registered geologist as defined in the Registered Geologist Act of the California Code of Regulations. The information contained in this report represents our professional opinions, and is based in part on information supplied by the client. These opinions are based on currently available information and are arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location. Other than this, no warranty is implied or intended.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

275 VALENCIA AVENUE
BREA, CA 92821

COORDINATES

Latitude (North): 33.9153000 - 33° 54' 55.08"
Longitude (West): 117.8509000 - 117° 51' 3.24"
Universal Transverse Mercator: Zone 11
UTM X (Meters): 421340.5
UTM Y (Meters): 3752896.5
Elevation: 424 ft. above sea level

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 06/05/2014 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 06/16/2014 has revealed that there are 4 UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there is 1 EDR US Hist Auto Stat site within approximately 0.25 miles of the target property.

- ▲ Sites at elevations higher than or equal to the target property
- ◆ Sites at elevations lower than the target property
- ▲ Manufactured Gas Plants
- Sensitive Receptors
- National Priority List Sites
- Dept. Defense Sites

- Indian Reservations BIA
- Areas of Concern
- Power transmission lines
- Oil & Gas pipelines from USGS
- 100-year flood zone
- 500-year flood zone
- National Wetland Inventory

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: 343
 Waste name: 343

Waste code: 491
 Waste name: 491

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D009
 Waste name: MERCURY

Facility name: HARBOR TRUCK BODIES, INC.
Site name: HARBOR TRUCK BODIES
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013	Source: EPA

Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 05/29/2014
Number of Days to Update: 94	Next Scheduled EDR Contact: 09/08/2014
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/31/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/08/2013	Telephone: 703-603-8704
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 07/08/2014

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/19/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 703-603-0695
Date Made Active in Reports: 07/15/2014	Last EDR Contact: 06/05/2014
Number of Days to Update: 116	Next Scheduled EDR Contact: 09/22/2014
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/19/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 703-603-0695

State- and tribal - equivalent CERCLIS

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 06/05/2014	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 06/06/2014	Telephone: 916-323-3400
Date Made Active in Reports: 07/09/2014	Last EDR Contact: 06/06/2014
Number of Days to Update: 33	Next Scheduled EDR Contact: 08/18/2014

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Date of Government Version: 12/31/2012	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 07/16/2013	Telephone: 916-255-1136

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

APPENDIX D: QUALIFICATIONS/INSURANCE

Jonathan Wu
Project Engineer

Education

Bachelor of Science, Engineering Technology, California State Polytechnic University,
Pomona, California

Registrations/ Certifications

ASTM E2018 Property Condition Assessment Training

Termites and Woods Destroying Pests Correspondence Course Certification

AHERA Certified Asbestos Building Inspector

Certificate of Completion for PCA / PNA 8-Hour Training and Final Exam including the
following modules: Structural Module, Roofing Module, MEP Module, ADA / FFHA Module,
Red Flag Issues, Cost Tables and Fannie Mae 4099 Forms

Microsoft Certified Professional

Summary of Professional Experience

Mr. Wu has more than 13 years of experience in the commercial real estate due diligence industry, including more than 10 years conducting PCAs, three years of which have been for financial institutions. Specifically, Mr. Wu has evaluated and completed numerous property types and understands the needs and requirements of varied number of reporting standards including the American Safety for Testing and Material (ASTM) standards and other customized client formats. In addition, Mr. Wu's experience spans over ten years in commercial construction and consulting services, which includes project management in overseeing the development and re-construction of service stations and underground fuel storage systems for major oil companies.

Mr. Wu is familiar with all standards of due diligence property assessments and the needs and requirements of a varied number of reporting standards, including the Property Condition Assessments (PCRs), Physical Needs Assessments (PNAs), Small Loan PCAs, Streamline PNA with Limited Environmental Review, Fannie Mae DUS, Freddie Mac, and customized client formats or scopes. Mr. Wu has experience in identifying the physical condition of properties, investigating problematic construction materials, visual inspection of the exteriors of the buildings for evidence of termites or wood boring insects, estimating costs to repair or replace problematic building systems, projects capital replacement costs over a loan term, and preparing written reports.

Prior to joining Partner, Mr. Wu served as a professional associate for another industry leading commercial due diligence company. Mr. Wu conducted field assessments of commercial real estate in order to identify construction and environmental conditions and issues, and prepared written reports according to client guidelines.

Relevant project experience for Mr. Wu includes:

- Conducted several large portfolios of Property Condition Assessments and Physical Needs Assessments for various financial institutions
- Completed several hundred due diligence Property Condition Assessments and Physical Needs Assessments for commercial office buildings, mobile home parks, gasoline stations, hotels/motels, assisted living and nursing home facilities, industrial/warehouse buildings, multi-family residences, self-storage facilities, and retail shopping centers
- Performed Property Condition Assessments of several industrial/warehouse buildings (200,000+ square feet) in Southern California
- Conducted several commercial site evaluations of properties' compliance with provisions of the Americans with Disabilities Act (ADA) requirements
- Over ten years of experience in construction and re-construction of service stations and underground fuel storage system, responsible for research, planning, and design/layout of gasoline station buildings and fuel storage/piping system; clients included Arco, Chevron, Mobil, Shell, Texaco and Los Angeles County Internal Service Division.

Mr. Wu has technical experience working for the following financial institutions:

- Alliant Capital, LLC
- Arbor Commercial Mortgage
- Bank Leumi USA
- Beech Street Capital
- Capmark Financial Group
- CBRE Capital Markets, Inc.
- Centerline Capital Group
- Chase Bank
- City National Bank
- Deutsche Bank Berkshire Mortgage
- GE Real Estate
- Genworth North America Corporation
- GMAC Commercial Mortgage Corporation
- Greystone Servicing Corporation, Inc.
- JP Morgan Chase Bank
- Kinecta Federal Credit Union
- L.J. Melody & Company
- Morgan Stanley Mortgage Capital, Inc.
- Northmarq Capital, LLC
- PNC Bank / ARCS
- Sierra Capital Partners
- Union Bank
- Ventas, Inc.
- Walker and Dunlop
- Wells Fargo Bank

Brian Gallagher, P.G.
Senior Project Manager

Education

B.S. Geology, Florida State University

Registrations

Registered Professional Geologist, Florida
Registered Professional Geologist, Wisconsin
OSHA 40-Hour Health and Safety Training

Summary of Professional Experience

Mr. Gallagher currently acts as a Senior Project Manager for Partner's environmental services group in South Florida. Mr. Gallagher is a senior consultant with 15 years of experience in the environmental consulting industry and has used his experience and client dedication to bring a higher level of focus for identifying business environmental risk and evaluating environmental liabilities, understanding and interpretation of environmental regulatory climate both domestically and internationally, and managing aggressive project deadlines. Key responsibilities have included preparation of technical and cost proposals; evaluation of key subcontractors including qualifications, fees, contracts, etc; oversight of daily project activities including allocation of resources, monitoring of budgets and preparation of all invoicing; and completion of draft and final reports.

Mr. Gallagher has provided technical and management expertise on a variety of due diligence assessments projects and recently managed the successful implementation of over 150 property assessments throughout North America for a national equipment rental company. Over the last 10 years, Mr. Gallagher has conducted hundreds of environmental site assessment projects in conformance with ASTM E1527-05/AAI requirements and client specific protocol. Finally, Mr. Gallagher has managed several portfolios regarding pre and post-acquisition environmental due diligence for multiple Fortune 500 companies, both domestically and internationally.

Mr. Gallagher also has experience performing limited Property Condition Assessments (PCA), indoor air quality (IAQ) sampling, and asbestos and lead based paint inspections. Project sites include office buildings, assisted living facilities, and many other commercial settings.

Mr. Gallagher also has extensive Phase II subsurface investigation and mitigation experience in all aspects of subsurface investigations with respect to soil and/or groundwater contamination at a variety of locations, including: gas stations, dry cleaners, airports, and many other industrial settings. Specific responsibilities included fee proposal preparation; coordination of contractor submittals in regards to qualifications, bids, subcontractor agreements, addendums, and schedules; utility locates; contractor oversight, screening and logging of soil profiles, soil and groundwater sampling, soil remediation, and report preparation.

Finally, Mr. Gallagher's diversity across industrial, municipal, and commercial environments is a major contribution to Partner Engineering and Science's Associate team in the Southeast, Northeast, and Midwest region of the United States.

Charles Tallinger, LEED AP
National Client Manager

PARTNER

Education

B.S. Earth Science, Western Michigan University

Registrations

LEED AP

Affiliations

Member, Mortgage Bankers Association

Member, Young Real Estate Professionals – New York

Summary of Professional Experience

Mr. Tallinger has over eight years of experience in the commercial real estate due diligence industry. He began his career as a project manager focusing on Phase II subsurface investigations and Phase III remediation projects. He has served as a project manager or executive senior reviewer on over 2,000 real estate transactions throughout his career. His due diligence resume includes experience at all levels, including advising lenders and real estate investors through the following product types:

- Phase I Environmental Site Assessments
- Phase II Subsurface Investigations
- Phase III Site Characterizations
- Remedial Cost Estimates
- Environmental Transaction Screens
- Moisture Intrusion Management Plans
- Soils Management

Mr. Tallinger has extensive experience with the unique issues associated with Phase II subsurface investigations and Phase III site characterizations associated with New York City development projects. Specifically he has managed these processes for multiple high profile Manhattan developments including the Goldman Sachs World Headquarters, and 15 Central Park which consisted of designing and implementing a soils management plan for the removal of 55,000 tons of soil.

Over the past three years Mr. Tallinger has focused on managing client relationships with institutional commercial real estate lenders and equity owners. In this time he has worked with CMBS lenders, portfolio lenders, legal counsel, regulatory agencies and special servicers to quantify environmental and structural risk associated with commercial real estate transactions.

Mr. Tallinger's core focus at Partner is to provide real estate lenders, investors and equity owners with the advice they need to quantify hard asset risk and provide them with the information they need to make informed real estate business decisions.

Violations

Violation Date: 07/17/2020
Violation Program: HMRRP
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 07/20/2020. Observation: The training documents submitted prior to the virtual inspection did not include updated training records for Eddie. Eddie's last hazmat training was conducted on 6-25-2019. Corrective Action: Please make sure annual training is provided to all employees that are working with hazardous materials and for procedures related to release or threatened release of a hazardous material.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date: 07/17/2020
Violation Program: APSA
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 07/31/2020. Observation: The facility observed leaking pipes during monthly testing for both diesel tanks for multiple months in 2020. The tank piping leak next to the tank connection on the 1000 gallon tank and the elbow of the supply pump piping on the 1500 gallon tank is leaking. Corrective Action: Please correct the visible discharges promptly upon identification and correct the leaking piping and send pictures to this agency within 60 days.

Violation Description:

Failure to promptly correct visible discharges and promptly remove any accumulations of oil in diked areas.

Violations

Violation Date: 07/17/2020
Violation Program: APSA
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 07/31/2020. Observation: Spill prevention annual briefings were past due for a couple of the maintenance staff employed at this facility. Corrective Action: Conduct spill prevention briefings annually. Provide compliance verification to this agency to correct this violation.

Violation Description:

Failure to conduct spill prevention briefing for oil-handling personnel at least once a year to assure adequate understanding of the SPCC Plan.

Eval Program: HW
Eval Source: CERS
Eval Notes:

On site to conduct a routine hazardous waste inspection. Consent to enter, inspect and take any necessary pictures was given by the Chief Engineer, Enswins Cordero. Juan Melendez, the Safety Engineer confirmed that the site has 3400 employees and that the ownership has not changed. The hazardous waste found here: - Used Oil - Fluorescent Lamps - Lithium and Alkaline Batteries All containers of hazardous waste were covered, and were labeled properly. Manifests were available and were reviewed, and waste was being picked up by Safety Kleen. Walked the perimeter of the site, and there were no hazardous waste spills or discharges observed during this inspection. Weekly inspections are performed by the Building Safety Engineer, Juan Melendez. Necessary Emergency Response information was posted inside the employee office area. The dumpster at the back of the was checked and there was no hazardous waste. Annual Training is being provided to [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

EI ID: 10476844	EI Description: Hazardous Waste Generator
EI ID: 10476844	EI Description: Chemical Storage Facilities

Violations

Violation Date: 08/05/2020
Violation Program: HW
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Source: CERS
Violation Division: Orange County Environmental Health

Violation Notes:

OBSERVATION: Employees are not thoroughly familiar with proper waste handling and emergency procedures. No hazardous waste training documents were available on-site. CORRECTIVE ACTION: Please conduct employee training on an annual basis for hazardous waste management procedures and emergency response training relevant to the positions in which they are employed. The training sign in sheet should include: name, date, signature and type of training and submit training documentation to this agency within 60 days.

Violation Description:

Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

Violations

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 08/16/2015. The chemical inventories are not adequate. See the report below. Please correct within 30 days.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 05/15/2014
Violation Program: HW
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 05/15/2014. This violation was corrected during the inspection. One drum of aerosols, used oil, oily debris and waste paint were labeled during the inspection. Discussed the need to properly label all containers of hazardous waste.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 07/27/2017
Violation Program: HW
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 08/26/2017. A 55 gallon drum of Oily sludge did not have a label. Please make sure all containers holding hazardous waste has the following information on the label: "Hazardous Waste", waste (name), hazard property (Eg: toxic, flammable, corrosive, reactive etc.), physical state (solid, liquid), accumulation start date, and the business address. Three 55 gallon Used Oil drums did not have labels. Used oil containers need the following information: "Used oil", and accumulation start date. Please send a picture of the labeled containers to this agency within 30 days.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 07/27/2017
Violation Program: HW
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 01/03/2019. The site has waste water treatment unit and the solid (filter cake) waste generated from the treatment unit is being shipped off as Non- hazardous waste. Please take a representative sample of the filter cake to a State Certified laboratory and have a Total Threshold Limit Concentration (TTLC) test for regulated heavy metals conducted. Provide a copy of the lab results to this Agency within 30 days. Based on the lab results, additional testing may be required. Please contact Shruthi Sill at ssill@ochca.com

Violation Description:

Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes:

OBSERVATION: Uniform Hazardous Waste Manifests for Used Oil and Used Oil filters were not available at the time of inspection. CORRECTIVE

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

ACTION: Locate a copy of used oil manifests and submit copies to the CUPA to correct this violation.

Violation Description:

Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Evaluations

Eval Date: 01/09/2019
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

Received and reviewed the test report from Enviro-Chem for the filter cake samples at manufactured packaging products. The analytical results indicated that the filter cake sample is not a hazardous waste, all regulated metal levels from the TTLC were below reportable quantities. The filter cake waste is not hazardous waste. Please maintain the test results on site for at least three years. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

On site to conduct a routine hazardous waste inspection. Consent to enter, inspect and take any necessary pictures was given by the Plant Supervisor, Red Silvestre. Mr. Silvestre confirmed that the site has 75 employees. The hazardous waste found here: - Waste Oily Sludge (From Process floors) - Oily Rags/ Debris - Used Oil - Waste Paint - Aerosol Manifests were available and were reviewed. Walked the perimeter of the site, and there were no hazardous waste spills or discharges observed during this inspection. Weekly inspections are performed by warehouse staff. Necessary Emergency Response information was present inside the lunch area. The dumpster at the back of the warehouse was checked and there was no hazardous waste. Annual Training is being provided to employees and it was completed January 2017. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Program: HW
Eval Source: CERS
Eval Notes:

On-site for a routine inspection. Met with Ron Castro and obtained consent to conduct the inspection. Hazardous Waste receipts made available and reviewed. HW containers properly labeled this date by the operator. Four drums were labeled during the inspection. See the violation above. Discussed the non-hazardous waste water treatment system this date. The facility uses water based ink to print cardboard boxes. Between colors, the printing inks are flushed out with water. The water is transferred to a treatment system that uses heat and chemicals to separate the ink from the water. The ink is drummed for disposal. The water is sewerred. Analytical has been run on the request of the OCSD. This analytical includes testing for copper, which id the only metal thought to be in the water based inks. These analytical results were reviewed this date. The ink residue that is disposed of at the end of this process is being disposed of as "NON-HAZ FILTER CAKE". [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

The following material was observed in amounts that meet or exceed the minimum volumes required for disclosure: - Oily Water - Batteries The site had soap that was 55 gallon listed on CERS, the only hazard property is irritant, and it does not need to be reported. According to HSC 25507 (a) (4) (A), the reporting threshold for liquids that are an irritant or a sensitizer is 550 gallons. Reviewed BEP and the site map with the business. Assisted with CERS Submission. Emergency response equipment was present on-site. Site map was current and was reflective of site conditions. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) on CERS within 30 days of the change. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations

Violation Date: 01/17/2018
Violation Program: HMRRP
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 02/16/2018. No annual HMBP training records were available for review. Failure to provide and maintain records of annual training and refreshers to employees about hazardous materials and emergency response plan is a violation of HSC 6.95 25505(a)(4). The training sign in sheet should include: name, date, signature and type of training. Please provide training for the employees at this facility and submit training documentation to this agency within 30 days.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Eval Source: CERS
Eval Notes:

INSPECTOR COMMENTS: 03/07/2015-Reviewed and declined Please make the following changes: 1) Mineral Oil -Average Daily amount is what is on-site, not what is USED. Change to 35 gallons -Annual Waste amount is 0 -Maximum daily amount is 70 -State Waste code is BLANK If you have waste mineral oil in a drum, it needs to be on a separate inventory sheet. 2) Mineral Oil with clay absorbent: -WASTE not a mixture -Contaminated absorbent is the common name -Should be in pounds not gallons 3) Propane -PURE not a mixture -LIQUID not a gas -ADD the CAS number in the field below Common name 4) MAP -Needs to show the emergency evacuation routes and assembly areas.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 04/15/2015
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

Allan Automatic Sprinkles of So Cal, A Division of Shambaugh & Son LP, an EMCOR Company 3233 ENTERPRISE ST BREA CA 92821 On-site for a routine inspection. Ownership change in December of 2013. Reviewed the manifests from Safety-Kleen. A OCHCA BEP is on-site. HW containers properly labeled this date by the operator. Accumulation start dates added to the containers during the inspection.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 06/30/2015
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency

Eval Notes:

INSPECTOR COMMENTS: On-site for a routine inspection. Met with Rob Thompson and toured this oil production facility. Verified the inventory and the map that has been submitted on E Submit. The following two (2) chemicals need to be added to the inventory: 1) Hydraulic oil ISO VGA 46 2) HDAX 5200 Low Ash Oil Please add the following to the Map: All areas with hazardous waste storage or handling need to be identified. Use OHMS (outside hazardous material storage) and IHMS (inside hazardous material storage) to identify these areas. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations

Violation Date:	03/12/2020	Violation Source:	CERS
Violation Program:	HWLQG	Violation Division:	Orange County Environmental Health
Citation:	22 CCR 15 66262.41 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66262.41		
Violation Notes:			

Returned to compliance on 03/12/2020. Observation: Facility representative was unsure if the biennial report was submitted by March 1st. Corrective Action: Please make sure to prepare and submit the biennial report and maintain the report on site for three years. The facility was able to obtain a copy of the biennial report from the consultant and the consultant had submitted the biennial report to RCRA online per Mr. Houng.

Violation Description:

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

Failure of a large quantity RCRA generator to prepare the Biennial report (Form 8700), and submit to DTSC by March 1st on even numbered years ; and maintain it onsite for three years.

Violations

Violation Date: 03/12/2020
Violation Program: HWLQG
Citation: HSC 6.5 25244.21 - California Health and Safety Code, Chapter 6.5, Section(s) 25244.21
Violation Source: CERS
Violation Division: Orange County Environmental Health
Violation Notes:

Returned to compliance on 03/12/2020. Observation: The SB-14 documentation were not available for review. Corrective Action: Complete and maintain for review all the requirements for source reduction evaluation for the reporting year 2018. The violation for SB-14 was corrected on site, Mr. Hounq was able to obtain the documents through email from the consultant during this inspection.

Violation Description:

Failure to adequately complete, and maintain for review, all requirements of the source reduction evaluation review and plan (SB-14).

Violations

Violation Date: 03/22/2017
Violation Program: HWLQG
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Source: CERS
Violation Division: Orange County Environmental Health
Violation Notes:

Returned to compliance on 04/28/2017. None of the hazardous waste containers were labeled, they include a 55 gallon drum of primer (paint) filters, 55 gallon drum of flammable paint waste, 55 gallon drum paint soaked rags. Please make sure all containers holding hazardous waste has the following information on the label: "Hazardous Waste", waste (name), hazard property (Eg: toxic, flammable, corrosive, reactive etc.), physical state (solid, liquid), accumulation start date, and the business address.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 03/12/2019
Violation Program: HWLQG
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Source: CERS
Violation Division: Orange County Environmental Health
Violation Notes:

Returned to compliance on 07/24/2019. The training was only conducted for only two employees at this location. The training requirement for employees handling hazardous waste or managing hazardous waste was explained to the site contacts Mr. Hounq and Mr. Palliyage. Corrective Action: Please conduct employee training on an annual basis for hazardous waste management procedures and emergency response training relevant to the positions in which they are employed. Complete a training program within 30 days. Each generator must maintain the following documents and records at the facility: a) The job title for each position at the facility related to hazardous waste management, and the name of each employee filling each job. b) A written job description for each job title mentioned above and must include the required skills, education, or other qualification, and duties of personnel assigned to each position.

Violation Description:

Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violation Date:	03/12/2019	Violation Source:	CERS			
Violation Program:	HWLQG	Violation Division:	Orange County Environmental Health			
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11					
Violation Notes:						

Returned to compliance on 12/02/2019. The site has zinc plated carbon steel for the making their truck bodies. Please complete a waste determination for the grinding/sanding area that generates metal dust to ensure the waste is not hazardous waste. The site also changed the hazardous materials recently, so the waste analysis that was completed in 2005 is no longer valid. Please complete a waste determination for the waste streams at the three paint booths, the filter cake and the influent from the pressure washing area. Take a representative sample of the waste sanding dust to a State Certified laboratory and have a Total Threshold Limit Concentration (TTL) test for regulated heavy metals conducted. Provide a copy of the lab results to this Agency within 30 days. Based on the lab results, additional testing may be required.

Violation Description:

Failure to determine if the waste generated is a hazardous waste.

Citation:	22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16					
Violation Notes:						

Returned to compliance on 03/12/2020. Observation: The facility did not have training records readily available for the hazardous waste training conducted on site. Mr. Huong told me that the training was conducted in April of 2019, but he would need to call the consultant to obtain the records. Corrective Action: Please have hazardous waste training records available for review on-site for at least three years from the date the employee started work at the facility. The facility was able to obtain records from the consultant during the inspection and the violation has been corrected on site.

Violation Description:

Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of

Violation Program: HMRRP **Violation Division:** Orange County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 02/01/2016. Please complete an inventory sheet for the GF Coil Cleaner 224

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 03/12/2019 **Violation Source:** CERS
Violation Program: HWLQG **Violation Division:** Orange County Environmental Health
Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31
Violation Notes:

Returned to compliance on 03/12/2020. The hazardous waste drum for flammable paint has had a release to the environment. Please refer to the pictures attached to the inspection report. The hazardous waste zinc filters are not being stored properly to avoid a release to the environment. Please refer to the pictures attached to the inspection report. Please make hazardous waste is being transferred so as to avoid a release to the environment. Please make sure staff are trained to clean-up spills within 24 hours after the detection of leak or spill to prevent a release to the environment. Hazardous waste should be stored inside drums or approved containers to avoid a release to the environment. Please correct these violations immediately.

Violation Description:

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violations

Violation Date: 03/12/2019 **Violation Source:** CERS
Violation Program: HWLQG **Violation Division:** Orange County Environmental Health
Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Violation Notes:

Returned to compliance on 03/12/2019. The container of waste paint did not have a lid during this inspection. The funnel that is being used as a lid is also clumped up and deteriorated. All hazardous waste drums must be closed unless you are in the process of adding and/ or removing waste from the drum. Violation was corrected during the inspection. Please make sure hazardous waste (liquid) containers have water-tight lids so the hazardous waste liquid does not escape the container and cause a release to the environment when the container tips over.

Violation Description:

Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
(b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Eval Notes:

Verified ownership, the facility is a RCRA LQG. The hazardous waste containers found here include: - Flammable paint waste - Flammable Rags - Zinc filter waste The facility's zinc filter collection area has been cleaned up and violation I333 has been corrected and is now closed. The floor sweep was tested per Mr. Houng, and test results were submitted to this agency and the test indicated that the waste is not hazardous. The manifests were available for review and the waste is being picked up on a bi-monthly basis. The site has a treatment unit that takes waste from the grinding area to the batch treatment system on-site. The influent waste was tested and it was non-hazardous. The common dumpster outside were checked during the inspection and there was no hazardous waste observed. The site maintains a weekly inspection binder for the HW inspection area. Please contact Shruthi Sill at ssill@ochca.com with regards ; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

On site to conduct a routine hazardous waste inspection. Consent to enter, inspect and take any necessary photos was given by the Engineering Manager, John Houng. Verified ownership with Mr. Houng and was notified that the site has about 160 employees employees. The hazardous waste containers found here: - Paint related waste - Paint/ Thinner filter - Rags soaked paint and thinner waste (Flammable soldis) - Waste flammable paint The site just had a hazardous waste pick-up yesterday. All containers of hazardous waste was closed, but none of the containers of hazardous waste were labeled. The site has dust collection system on-site in the griding room. The griding room only utilizes Carbon Steel materials per Mr. Houng and the filters in this room are changed every four weeks. The floors throughout the shop including the grinding room are swept on a regular basis per Mr. Houng. The debris and filters from the grinding room are thrown in the trash per Mr. Houng. [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

INSPECTOR COMMENTS: On-site for routine inspection. Met with John Houng this date and obtained consent to conduct the inspection. Hazardous Waste manifests and LDRs made available and reviewed. This facility appears to be a Large Quantity Generator. The facility submitted a biennial report in 2014. The report is due again by March 1, 2016. The facility already has an Federal EPA ID number and a Contingency Plan. The Business Activities Form submitted with the HMBP on the E Submit Portal has the LQG box checked. According to the waste totals generated in 2014 the business is not required to complete SB-14 documents. The facility generated 9.41 metric tonnes of waste in 2014. The SB-14 reporting threshold is 12 metric tonnes. The Training Plan and training records were reviewed. Please ensure the list of employees names is kept up to date. 90 Accumulation time (all hazardous waste on-site, including used oil) was checked. Weekly inspections of the [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Orange County Environmental Health
Eval Program: HWLQG
Eval Source: CERS
Eval Notes:

The influent waste water sample test results were submitted to this agency and sample results reveled that the waste going into the treatment unit is not hazardous, hence the waste water treatment does not fall into the tiered permitting process. The waste filter cake was also tested and it needs to be managed as a California hazardous waste (hazardous for Zinc). Please submit manifest to this agency to indicate that the waste is being managed correctly. The TCLP results were submitted for paint booth filter room #1, filter cake and metal grinding dust all came back below threshold quantities, so these waste streams are all non-RCRA hazardous waste and are toxic for the metals that they exceed the threshold quantities. Violation I 300 for testing is now closed and has been corrected. Violation I 133 for release to the environment is still open and outstanding. This agency has not received any paperwork of corrective action with regards to the storage of paint booth [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

Verified ownership with Mr. Houg and there has been no change. The hazardous waste found here include: - Waste flammable paint - Zinc filter waste (Toxic) - Flammable solids (Acetone Rags) - Non-RCRA Filter Cake The site has a treatment unit that takes waste water from the grinding area to a batch treatment system. The filter cake waste generated from the unit is shipped off as Non-RCRA waste and the water is being sewerred under a discharge permit from OCSD. Since there has been a change in the chemicals used in the process a waste determination needs to be completed for this process. The grinding room is using carbon steel materials that are coated in zinc per Mr. Houg. A waste determination needs to be completed for this unit prior to disposing of grinding dust into the municipal trash. The filters from the three spray-booths are still being managed as hazardous waste, a waste determination needs to be completed for these units as there has been a change in [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

The facility personnel were trained on hazardous waste management on April 3rd 2019. The training records presented today did not include the job title and job description for the trained personnel. Violation I126 is still open and outstanding. Violation I300 is still open and outstanding. The facility performed initial test results for the wastes. The effluent waste water was tested and not the influent waste water from the pressure washing area, please test the influent waste water. After reviewing the results, for Paint booth #1, please run an STLC for Barium and Zinc. For paint booth # 2 no additional testing is required. For paint booth#3, no additional testing is required. For the filter cake, please test STLC for Barium, Chromium and Zinc. For Metal grinding dust #1, please run STLC for Chromium, copper, zinc and nickel. Based on the results from the STLC, a TCLP test might be required for some of these samples. The flammable paint are has been cleaned up and [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Regulated Programs

EI ID: 10657333 **EI Description:** Hazardous Waste Generator
EI ID: 10657333 **EI Description:** Chemical Storage Facilities

Violations

Violation Date: 01/29/2016 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Orange County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 02/03/2016. Correct the violation within 30 days by completing the disclosure.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 01/30/2019 **Violation Source:** CERS

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

Violation Program: HW
Citation: 40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)
Violation Notes:

Returned to compliance on 01/30/2019. OBSERVATION: Emergency information posted next to the phone was incomplete. CORRECTIVE ACTION: Complete and post all required emergency information next to the telephone. Violation corrected on site.

Violation Description:

Failure to post the following information next to the telephone:
 (A) The name and telephone number of the emergency coordinator;
 (B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and
 (C) The telephone number of the fire department, unless the facility has a direct alarm.

Violations

Violation Date: 01/30/2019
Violation Program: HMRRP
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 01/30/2019. No annual HMBP training records were available for review. Failure to provide and maintain records of annual training and refreshers to employees about hazardous materials and emergency response plan is a violation of HSC 6.95 25505(a)(4). The training sign in sheet should include: name, date, signature and type of training. Please provide training for the employees at this facility and submit training documentation to this agency within 30 days. Training was completed for the staff during the inspection and sign in sheet was emailed to this agency.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date: 01/30/2019
Violation Program: HMRRP
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 01/30/2019. A drum of Rust inhibitor has not been reported under hazardous materials, and it has been found to be above threshold quantities. Please update CERS information to reflect the missing hazardous material. The violation for reporting has been corrected and is now closed with the updated CERS submission.

Violation Description:

Failure to electronically update business plan within 30 days of any one of the following events:
 A 100 percent or more increase in the quantity of a previously disclosed material.
 Any handling of a previously undisclosed hazardous materials at or above reportable quantities.
 A change of business address, business ownership, or business name.
 A substantial change in the handler's operations that requires modification to any portion of the business plan.

Violations

Violation Date: 01/29/2016
Violation Program: HMRRP
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 02/03/2016. Correct the violation within 30 days by completing the disclosure.

Violation Description:

Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Fadal Engineering 1360 Enterprise St #C Brea, CA 92821 INSPECTOR COMMENTS: On-site for routine inspection. Met with Tim Consalvi this date and obtained consent to conduct the inspection. Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP). Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a username and password and submit your HMD/BEP forms within the next 30 days. Businesses may also submit forms via the California Environmental Reporting System. The following hazardous materials need to be disclosed: 1) Water soluble degreaser (55 gallons) 2) Mobil DTE 24 (55 [Truncated]); Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 01/30/2019
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

The following material was observed in amounts that meet or exceed the minimum volumes required for disclosure: - Coolant - Hydraulic Oils - Oily water - Rust inhibitor Reviewed Business Plan and the site map with the business. Assisted with CERS submission during this inspection. Emergency response equipment was present on-site. Site map was current and was reflective of site conditions. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) on CERS within 30 days of the change. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 01/30/2019

EI ID:	10541998	EI Description:	Chemical Storage Facilities

Violations

Violation Date:	04/01/2019	Violation Source:	CERS
Violation Program:	HMRPP	Violation Division:	Orange County Environmental Health
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)		
Violation Notes:			

Returned to compliance on 04/09/2019. The Business has not submitted an HMBEP since 2016. Please update the chemical inventory and resubmit a hazardous materials business plan electronically on CERS electronic reporting site at <http://cersbusiness2.calepa.ca.gov/>. Please maintain a copy of the HMBP on-site and make it available to employees.

Violation Description:

Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

Violations

Violation Date:	04/01/2019	Violation Source:	CERS
Violation Program:	HW	Violation Division:	Orange County Environmental Health
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)		
Violation Notes:			

Returned to compliance on 04/05/2019. There were three Used Oil drums with an accumulation start date of 1-8-2018. Please ship of the Used Oil using and authorized hazardous waste hauler immediately and send copies of the manifest to this agency within 60 days.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:

- (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.
- (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).
- (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Eval Program: HW
Eval Source: CERS
Eval Notes:

On site to conduct a routine hazardous waste inspection. Consent to enter, inspect and take any necessary pictures was given by the Operations Manager, Robert Gale at 1:15 pm. Mr. Gale confirmed that the site has 28 employees. The hazardous waste container found here: - Oily water = 25 gallons The hazardous waste container was closed and labeled. It was started in 2013, but per Mr. Gale there is only 25 gallons in the drum. Manifests were available and were reviewed, and waste was being picked up by Enviro Guard. The oily water waste is generated on an episodic basis. per Mr. Gale. Walked the perimeter of the site, and there were no hazardous waste spills or discharges observed during this inspection. Weekly inspections are performed by the operator. Emergency response sticker with the necessary information was posted all throughout the work area. The dumpsters at the end were checked and there was no hazardous waste. Annual Training has been [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

On site to conduct a routine hazardous material and business emergency plan inspection. Consent to enter, inspect and take any necessary pictures was given by the Operations Manager, Robert Gale at 1:15 pm. Walked the site with Mr. Gale and observed the hazardous material storage areas throughout the Aerospace Manufacturing Company and the following materials were observed in amounts that meet or exceed the minimum volumes required for disclosure: - Propane Business emergency plan was accessible on-site. Emergency response equipment was present on-site and serviced. Annual employee training records were available for review. The training was completed on Jan 2016. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violation/Evaluation Summary

Note: VIOLATION or UNDETERMINED: There are VIOLATION or UNDETERMINED details or records associated with this facility (EPA ID) in the Compliance Monitoring and Enforcement table dated Jan, 2021.

Violation Details

Citation: F - 262.50-60
Violation Short Description: Generators - General
Violation Type: 262.A
Violation Determined Date: 19900206
Scheduled Compliance Date: 19900420
Return to Compliance: Observed
Actual Return to Compl: 19900418
Violation Responsible Agency: State

Enforcement Details

Enforcement Type: 120
Enforcement Type Description: WRITTEN INFORMAL
Enforcement Action Date: 19900320
Enf Disposition Status:
Disposition Status Date:
Enforcement Lead Agency: State
Proposed Penalty Amount:
Final Amount:
Paid Amount:

Evaluation Details

Evaluation Start Date: 20050525
Evaluation Type Description: COMPLIANCE EVALUATION INSPECTION ON-SITE
Violation Short Description:
Return to Compliance Date:
Evaluation Agency: State Contractor/Grantee
Evaluation Start Date: 19940714

Regulated Programs

EI ID: 10516144 **EI Description:** Chemical Storage Facilities
EI ID: 10516144 **EI Description:** Hazardous Waste Generator

Violations

Violation Date: 10/09/2019 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Orange County Environmental Health
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Notes:

Returned to compliance on 10/09/2019. OBSERVATION: the container of Used oil was observed open. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly closed. The violation has been closed during the inspection.

Violation Description:

Failure to meet the following container management requirements:
(a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
(b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violations

Violation Date: 10/09/2019 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Orange County Environmental Health
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Notes:

Observation: No training records were available for review for 2018 or 2019. Corrective action: Please conduct employee training on an annual basis for hazardous waste management procedures and emergency response training relevant to the positions in which they are employed. The training sign in sheet should include: name, date, signature and type of training and submit training documentation to this agency within 60 days.

Violation Description:

Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

during normal facility operations and emergencies.

Violations

Violation Date: 10/09/2019 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Orange County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 10/31/2019. Observation: The container of Used Oil had a faded label, and another drums of used oil had no label, a drum of waste antifreeze had no date.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 10/09/2019 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Orange County Environmental Health
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Notes:

OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste, Used Oil and waste antifreeze in the maintenance room offsite for disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide manifests that the violation has been corrected.

Violation Description:

- Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:
- (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.
 - (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).
 - (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violations

Violation Date: 10/09/2019 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Orange County Environmental Health
Citation: HSC 6.5 25189.5(a),25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a),25201(a)
Violation Notes:

Returned to compliance on 10/09/2019. OBSERVATION: Six fluorescent light bulbs were found in the dumpster during the hazardous waste inspection today. CORRECTIVE ACTION: Immediately discontinue disposing of hazardous waste at any facility not permitted by DTSC or causing hazardous waste to be disposed of at any point which is not authorized pursuant to HSC chapter 6.5. The light bulbs were removed from the trash and placed inside the UNiversal waste light bulb box located inside the facility. This violation has been corrected.

Violation Description:

Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to HSC 6.5.

Violations

Violation Date: 10/15/2013 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Orange County Environmental Health
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Notes:

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

Returned to compliance on 10/22/2013. The used oil and waste coolant have not been disposed of since 09/02/11. Please dispose of the waste immediately.

Violation Description:

Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.

Violations

Violation Date:	10/14/2014	Violation Source:	CERS
Violation Program:	HMRRP	Violation Division:	Orange County Environmental Health
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)		
Violation Notes:			

Returned to compliance on 10/23/2014. This training needs to be completed within 30 days.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date:	10/09/2019	Violation Source:	CERS
Violation Program:	HMRRP	Violation Division:	Orange County Environmental Health
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)		
Violation Notes:			

Returned to compliance on 10/09/2019. Observation: The hazardous materials reported on CERS were incorrect. Corrective Action: Complete and electronically submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. The violation was corrected on site, a CERS submission was completed and uploaded.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date:	10/14/2016	Violation Source:	CERS
Violation Program:	HW	Violation Division:	Orange County Environmental Health
Citation:	22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)		
Violation Notes:			

Returned to compliance on 11/01/2016. The waste gasoline has been on-site since 10/15/2013. Per Mr. Narayan, the business has slowed down and the drum isn't full yet. Informed Mr. Narayan that as a small quantity generator the waste must be shipped out every six months. Please ship out the waste and send a copy of the manifest to this agency within 30 days.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes:

Returned to compliance on 10/15/2013. This violation was corrected during the inspection.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date:	10/09/2019	Violation Source:	CERS
Violation Program:	HMRRP	Violation Division:	Orange County Environmental Health
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)		
Violation Notes:			

Returned to compliance on 10/09/2019. Observation: The site map was missing the location of hazardous materials, Used Oil, compressed gases, gasoline and paint. Corrective: Please update site map to include missing hazardous materials. This violation has been corrected this date.

Violation Description:

Failure to complete and electronically submit a site map with all required content.

Violations

Violation Date:	07/23/2014	Violation Source:	CERS
Violation Program:	HMRRP	Violation Division:	Orange County Environmental Health
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)		
Violation Notes:			

Returned to compliance on 10/14/2014. Documentation of the annual employee training could not be located during the inspection. Please forward documentation within 30 days.

Violation Description:

Failure to establish and electronically submit an adequate training program in safety procedures in the event of a release or threatened release of a hazardous material.

Eval Notes:

On site to conduct a routine hazardous waste inspection. Consent to enter, inspect and take any necessary pictures was given by Mailroom Supervisor, Yogesh Narayan at 11:15 am. Verified ownership with Mr. Narayan and confirmed that the site has about 200 employees. The hazardous waste containers found here: - Used oil = 110 gal - Gasoline Waste = 25 gal - Solvent (parts washer) = 100 gal - Oil filters = 200 items - Waste Antifreeze = 55 gal - Fluorescent light bulbs The fluorescent light bulbs are managed by a third party and shipped out monthly. Manifests were available and were reviewed and hazardous waste is being Safety Kleen. Walked the perimeter of the site, and there were no hazardous waste spills or discharges observed during this inspection. Emergency response information is posted outside the lunch area. The six dumpsters outside the shop was checked and no hazardous waste was observed. The weekly inspections are done by the shop [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/12/2017
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

On site to conduct a routine hazardous material and business emergency plan inspection. Consent to enter, inspect and take any necessary pictures was given by the Filed Engineer, Steve Sanders. Walked the unmanned Verizon wireless site with Mr. Sanders and observed the hazardous material storage area and the following material was observed in amounts that meet or exceed the minimum volumes required for disclosure: - Lead acid batteries Business emergency plan was present on-site. Emergency response equipment was present on-site and was serviced. Annual employee training records are electronically available at the main office per Mr. Sanders. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the contact Shruthi at [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Violation I632 for Site map has been corrected on CERS and is now closed. A revised HMBP was uploaded on CERS, and violation I463 is now corrected and is now closed. CERS 2018 submittal was reviewed and accepted. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/28/2020
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

On site to conduct a routine HM inspection due to a billing inquiry. Upon arrival, the high rise building was undergoing a lot of construction. Spoke to the Foreman on-site and he notified me that the building has been empty since they started construction in April. Spoke to Union Bank's representative from CBRE, Antonio Castanda (Facilities Coordinator) and he informed me that location is closed as of December 2019. The diesel tank is still on-site per facilities coordinator, but Union Bank is no longer occupying the high rise building. An RUR will be submitted for this facility. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 03/09/2016

Violations

Violation Date: 12/10/2013 **Violation Source:** CERS
Violation Program: APSA **Violation Division:** Orange County Environmental Health
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 05/19/2014. Please conduct monthly inspections as required in the SPCC and keep records for review by this agency.

Violation Description:

Failure to provide training regarding:

1. The operation and maintenance of equipment to prevent discharges.
2. Discharge procedure protocols.
3. Applicable pollution control laws, rules, and regulations.
4. General facility operations. AND
5. The contents of the SPCC Plan.

Violations

Violation Date: 09/04/2018 **Violation Source:** CERS
Violation Program: CalARP **Violation Division:** Orange County Environmental Health
Citation: 19 CCR 4.5 2765.1(b) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2765.1(b)
Violation Notes:

Returned to compliance on 11/06/2018. OBSERVATION: The owner/operator whose employees will not respond to accidental releases of regulated substances failed to meet the following: coordinated response actions with the local fire department for stationary sources with only regulated flammable substances held in a process above the threshold quantity; CUPA CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating the owner/operator has met the following: coordinated response actions with the local fire department for stationary sources with only regulated flammable substances held in a process above the threshold quantity.

Violation Description:

Failure of a stationary source whose employees will not respond to accidental releases of regulated substances to meet the following:

1. With only regulated toxic substances held in a process above the threshold quantity, is included in the community emergency response plan

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

Violation Description:

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violations

Violation Date: 09/04/2018
Violation Program: CalARP
Citation: 19 CCR 4.5 2755.1(b) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.1(b)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 11/06/2018. OBSERVATION: The owner/operator failed to ensure that the process is designed in compliance with recognized and generally accepted good engineering practices. A shower/eye wash was not available in the vicinity of the anhydrous ammonia system. Per ANSI Z358.1, Eyewash stations should be located on the same level as the hazard in a well-lit area that is properly marked as an emergency eyewash station. It must be positioned within 10 seconds (about 55 feet) of the hazard along a path that is free of obstructions. An eyewash & shower station must be installed within the anhydrous ammonia system. Also, This agency recommends the installation of an ammonia sensor in the vicinity of the anhydrous system per IAR II ch. 7 section 7.2. If you chose to cite the exception of this chapter, please cite and include the verbage in your RMP. CUPA CORRECTIVE ACTION: Please contact me with a schedule of events for the following corrections.

Violation Description:

Failure to ensure that the process is designed in compliance with recognized and generally accepted good engineering practices.

Violations

Violation Date: 09/04/2018
Violation Program: CalARP
Citation: 19 CCR 4.5 2755.3(a)(b) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.3(a)(b)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 11/06/2018. OBSERVATION: The owner/operator failed to prepare written operating procedures that provide clear instructions or steps for safely conducting activities associated with each covered process consistent with the safety information for that process and address the following: emergency shutdown and operations; startup following a normal or emergency shutdown or a major change that requires a hazard review; and equipment inspections. CUPA CORRECTIVE ACTION: Submit written operating procedures to the CUPA within 30-days.

Violation Description:

Failure to prepare written operating procedures that provide clear instructions or steps for safely conducting activities associated with each covered process consistent with the safety information for that process and address the following:

1. Initial startup;
2. Normal operations;
3. Temporary operations;
4. Emergency shutdown and operations;
5. Normal shutdown;
6. Startup following a normal or emergency shutdown or a major change that requires a hazard review;
7. Consequences of deviations and steps required to correct or avoid deviations;
8. Equipment inspections.

Violations

Violation Date: 12/01/2016
Violation Program: APSA
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 12/01/2016. Monthly inspection records were missing for review after May 2016. Please make sure inspections are conducted per the SPCC plan and the records are maintained on site for three years. Monthly inspection records were emailed to this agency on the night of 12/1/2016 and the violation was abated.

Violation Description:

Failure to comply with one or more of the following requirements:

1. Have record of inspections and integrity tests signed by the appropriate supervisor or inspector.
2. Keep written procedures and records of inspections and integrity tests for at least three years.
3. Keep comparison records.

Violations

Violation Date: 12/10/2013
Violation Program: HMRRP
Citation: 19 CCR 4 2729.2(a)(3) - California Code of Regulations, Title 19, Chapter 4, Section(s) 2729.2(a)(3)
Violation Source: CERS
Violation Division: Orange County Environmental Health
Violation Notes:

Returned to compliance on 05/19/2014. Please update the map on-line and include an orientation arrow.

Violation Description:

Failure to complete and/or submit an annotated site map if required by CUPA.

Violations

Violation Date: 12/01/2016
Violation Program: HW
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Source: CERS
Violation Division: Orange County Environmental Health
Violation Notes:

Returned to compliance on 12/01/2016. The cubic yard box containing oily rags did not have a label. Please make sure all containers holding hazardous waste has the following information on the label: "Hazardous Waste", waste (name), hazard property (Eg: toxic, flammable, corrosive, reactive etc.), physical state (solid, liquid), accumulation start date, and the business address. Violation was noted for improper labeling, was corrected during the inspection.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 09/04/2018
Violation Program: CalARP
Citation: 19 CCR 4.5 2755.5(d) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.5(d)
Violation Source: CERS
Violation Division: Orange County Environmental Health
Violation Notes:

Returned to compliance on 11/06/2018. OBSERVATION: The owner/operator failed to perform or cause to be performed inspections and tests on process equipment that: /follow recognized and generally accepted good engineering practices; industry standards or codes, and good engineering practices. (13) PRVs are past the 5-yr replacement date. CUPA CORRECTIVE ACTION: Replace PRVs immediately. Please provide a receipt or invoice showing that the PRVs were replaced in order to abate this violation.

Violation Description:

Failure to perform or cause to be performed inspections and tests on process equipment that:
 1. Follow recognized and generally accepted good engineering practices;
 2. The frequency of inspections & tests must be consistent with applicable manufacturer's recommendations, industry standards or codes, good engineering practices and prior operating experience).

Returned to compliance on 11/06/2018. OBSERVATION: The owner/operator failed to ensure that problems identified in the hazard review are resolved in a timely manner. CUPA CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that problems identified in the hazard review are being resolved in a timely manner. Based on the tracking sheet, 3 of 4 recommendations are outstanding.

Violation Description:

Failure to address the following in the hazard review:

1. Document the results of the hazard review and ensure problems identified are resolved;
2. Complete these actions on a timetable agreed upon with the AA, or within two and one-half (2.5) years of performing the hazard review, or the next planned turnaround, for those items that require a turnaround;
3. Document the final resolution taken to address each recommendation and actual completion date.

Violation Division: Orange County Environmental Health

Returned to compliance on 12/01/2016. Annual APST training records for 2016 were not available for review during the inspection. The last training sign-in sheet present on-site was from March 2015. Discharge prevention briefings must be conducted with all oil-handling personnel annually to assure adequate understanding of SPCC plan, and the training should also review known discharges or failure, malfunctioning components, and any recently developed precautionary measures. The training sign-in sheets were emailed to this agency on the night of 12/1/2016 to abate the violation.

Violation Description:

Failure to provide the following training to all oil-handling personnel:

1. Operation and maintenance of equipment to prevent discharges.
2. Discharge procedure protocols.
3. Applicable pollution control laws, rules, and regulations.
4. General facility operations.
5. Contents of the SPCC Plan.

Violations

Violation Date: 12/01/2016
Violation Program: HW

Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 12/12/2017. An aerosol drum was present on-site that had an accumulation start date of 6/20/2015. This drum has been on site for longer than 180 days. Please make sure to dispose of the aerosol waste drum immediately, and email me a copy of the manifest within 30 days.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

onsite never exceeds 6,000 kilograms.

(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).

(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violations

Violation Date: 08/31/2015 **Violation Source:** CERS
Violation Program: CalARP **Violation Division:** Orange County Environmental Health
Citation: 19 CCR 4.5 2755.6(a) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.6(a)
Violation Notes:

Returned to compliance on 08/31/2015. Complete the Compliance Audit and furnish OCHCA a copy within 30 days.

Violation Description:

Failure to certify that they have evaluated compliance with the provisions of this article at least every three years to verify that the procedures and practices developed under this chapter are adequate and are being followed.

Evaluations

Eval Date: 05/19/2014
Violations Found: Yes
Eval General Type: Other/Unknown

Eval Notes:

On-site for a routine CalARP inspection. Met with Plant Manager Mike Pankratz of Brea Power II and Geoff Knight of Yorke Engineering.. This facility is regulated under CalARP Program Level 2 requirements for the following: - Anhydrous Ammonia (6,860 pounds) - 19% Aqueous Ammonia (77,290 pounds) A complete facility walk through was conducted. Safety equipment was discussed. A safety shower/eye wash station was observed in the vicinity of the aqua ammonia tank. A shower/eye wash was not available in the vicinity of the anhydrous ammonia system. Per ANSI Z358.1, Eyewash stations should be located on the same level as the hazard in a well-lit area that is properly marked as an emergency eyewash station. It must be positioned within 10 seconds (about 55 feet) of the hazard along a path that is free of obstructions. An eyewash & shower station must be installed within the anhydrous ammonia system. In addition, one ammonia sensor was located within the secondary [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

Received email from Jerry Gallegos of Brea Power. Email is below: Good day Marco, We are working through the final items noted in your audit findings and had a few questions. We need clarification for violation I221, the attached document is our Systems Inspection procedure from our RMP. The attached document is how we comply with this, in addition to daily rounds readings sheets completed by our outside operators. It requires they visually inspect the same said equipment - would this suffice for your concern here? Prepared written operating procedures that provide clear instructions for each covered process CUPA - MINOR VIOLATION COMPLY BY: 10/31/2018 Failure to prepare written operating procedures that provide clear instructions or steps for safely conducting activities associated with each covered process consistent with the safety information for that process and address the following: 1. Initial startup; 2. Normal operations; 3. Temporary operations; [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

The petroleum products above 55 gallons that exceed the total aggregate capacity are : - Used oil - Lubricating oils (inside compressors, chillers, turbines) The closed-loop oil-filled operational equipment that exceed 1320 are subject to APSA and SPCC requirements. Spill response material and emergency response equipment were present on-site. A Tier I Qualified Spill Prevention Control and Countermeasure (SPCC) was present on site. The oil in the transformer is exempt and does not count towards the APSA thresholds per HSC 25270.2 (a). SPCC inspection logs were present on site. Inspectors are being trained on Spill response procedures. The perimeter of the facility was secured. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:		On-site for routine inspection. Met with Jerry Gallegos this date as well as Geoff Knight of Yorke Engineering. This is a Program Level 2 CalARP facility that has two (2) regulated processes on-site. Anhydrous ammonia is used as a chiller agent on the gas compression (upper side) of the plant and aqueous ammonia is used for NOX reduction on the turbine side (lower side) of the plant. There is no Anhydrous Ammonia vessel at the facility (high pressure receiver). The anhydrous ammonia is contained inside the chiller equipment. According to Mr. Gallegos there have been no changes to either regulated process or the amount of regulated material. RMP Submit data points were reviewed. Reviewed the following aspect of the RMP with Jerry Gallegos and Geoff Knight: 1) Process Safety Information: Information that meets the requirements of OSHA PSM has been completed and is in the RMP. 2) Hazard Assessment: There were two separate assessment. One for each [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

On-site for routine inspection. Met with Jerry Gallegos this date and obtained consent to conduct the inspection. Also on-site was Geoff Knight of Yorke Engineering. Hazardous Waste receipts made available and reviewed. HW containers properly labeled this date. Te only waste stream generated on a consistent basis is the oily debris. All other waste is generated when maintenance is conducted on the plant machinery. The waste is generated at this facility and is stored at 1942 Valencia, which is the sister plant on the landfill property. The waste is not transported on a public road. The two sites are now going to considered on site. Please use the EPA ID number for 1935 Valencia for all of the waste streams and manifests. Facility has an OCHCA hazardous materials disclosure that contains information for the emergency coordinator. Inspected the trash/dumpster and it does not appear to contain hazardous waste. The perimeter of the facility was also [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

<p>On site to conduct a routine hazardous waste inspection. Consent to enter, inspect and take any necessary pictures was given by the General Manager, Mike Pankratz. Per Mr. Pankratz, the site currently employs 17 people. The hazardous waste found here: - Used Oil = 110 gallons - Aerosol Cans - Oily debris All containers of hazardous waste was closed properly. Manifests were available and were reviewed, and waste was being picked up by Industrial Recovery. Walked the perimeter of the site, and observed a couple of oil spills during this inspection. Weekly inspections are performed by the operator. Emergency response information was present at the site. The dumpsters in the back was checked and there was no hazardous waste present during this inspection. Annual Training has been provided to the employees per Mr. Pankratz. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions. ; Note: data in [EVAL Notes] field for some records is truncated from the source.</p>

On-site for a follow up inspection. Met with Jerry Gallegos and Geoff Knight this date. Discussed the open violations from the previous inspection report. An email was received by this agency on 02/27/14 that addressed the violations. These documents as well as other documents were reviewed this date. Abate violation P203 from the previous inspection report: 1) Operating procedures need to be reviewed and certified annually. This is not correct. This is a Program Level 2 facility. The annual certification only applies to Program Level 3 facilities. 2) Required Operating procedures are not included in the RMP. A cross reference table was created pointing to all eight (8) required operating procedures (document attached). 3) Training on the operating procedures. The training was conducted on 03/27/14. 4) Ensure the ammonia sensor is calibrated per the manufacturer's specifications. The sensor was calibrated on 01/31/14 (document attached) 5) Forward [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

BROAD ROCK RENEWABLES LLC 1935 VALENCIA AVE BREA CA 92823 On-site for a routine hazardous materials inspection. Met with Jerry Gallegos of Broadrock Renewables and Geoff Knight of Yorke Engineering (consultant). The HMBP forms have been submitted on CERS (12/05/13). The on-line disclosure has not been approved by OCHCA and will be reviewed at a later date. The printed forms from this disclosure were reviewed during the inspection. Please add FIRE CODE HAZARD CLASSES to all applicable hazardous materials. According to Geoff Knight of Yorke Engineering who completed the on-line disclosure stated the map is the only part of this disclosure that has not been updated. The map needs to meet the requirements of the state annotated map guidelines which includes an ORIENTAITON ARROW.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations

Violation Date: 12/01/2016
Violation Program: APSA
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 12/01/2016. Monthly inspection records were missing for review after May 2016. Please make sure inspections are conducted per the SPCC plan and the records are maintained on site for three years. Monthly inspection records were emailed to this agency on the night of 12/1/2016 and the violation was abated

Violation Description:

Failure to comply with one or more of the following requirements:

1. Have record of inspections and integrity tests signed by the appropriate supervisor or inspector.
2. Keep written procedures and records of inspections and integrity tests for at least three years.
3. Keep comparison records.

Violations

Violation Date: 12/01/2016
Violation Program: APSA
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Violation Source: CERS
Violation Division: Orange County Environmental Health

Returned to compliance on 12/01/2016. Annual APST training records for 2016 were not available for review during the inspection. The last training sign-in sheet present on-site was from March 2015. Discharge prevention briefings must be conducted with all oil-handling personnel annually to assure adequate understanding of SPCC plan, and the training should also review known discharges or failure, malfunctioning components, and any recently developed precautionary measures. The training sign-in sheets were emailed to this agency on the night of 12/1/2016 to abate the violation.

Violation Description:

Failure to provide the following training to all oil-handling personnel:

1. Operation and maintenance of equipment to prevent discharges.
2. Discharge procedure protocols.
3. Applicable pollution control laws, rules, and regulations.
4. General facility operations.
5. Contents of the SPCC Plan.

Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

On-site for a routine hazardous materials inspection. Met with Jerry Gallegos of Broadrock Renewables and Geoff Knight of Yorke Engineering (consultant). The HMBP forms have been submitted on CERS (12/05/13). The on-line disclosure has not been approved by OCHCA and will be reviewed at a later date. The printed forms from this disclosure were reviewed during the inspection. Please add FIRE CODE HAZARD CLASSES to all applicable hazardous materials (compressed gases) and the sodium nitrite based cleaner. According to Geoff Knight of Yorke Engineering who completed the on-line disclosure stated the map is the only part of this disclosure that has not been updated. The map needs to meet the requirements of the state annotated map guidelines which includes an ORIENTAITON ARROW. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Program: APSA
Eval Source: CERS
Eval Notes:

The petroleum products above 55 gallons that exceed the total aggregate capacity are : - Used oil - Lubricating oils The Engine room was dismantled in the past week and the Used Oil is being shipped off as hazardous waste. Spill response material and emergency response equipment were present on-site. A Tier I Qualified Spill Prevention Control and Countermeasure (SPCC) was present on site. Please update SPCC to reflect the new quantities of oil stored on site. SPCC inspection log was missing. Inspectors are being trained on Spill response procedures. The perimeter of the facility was secured. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions; Note: data in [EVAL Notes] field for some records is truncated from the source.

Evaluations

Eval Date: 03/15/2019
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

The following material was observed in amounts that meet or exceed the minimum volumes required for disclosure: - Propane - Refrigerant gases - Batteries Reviewed Business Plan and the site map with the business. Emergency response equipment was present on-site. Site map was current and was reflective of site conditions. Annual Hazcom training was conducted on April 2018. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) on CERS within 30 days of the change. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 04/21/2016
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Reviewed and declined the CERS 2016 HMBP disclosure. Remove all inventory sheets for materials and wastes under 500 pounds and 55-gallons. Add the emergency response equipment locations to the site map.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations

Violation Date:	11/30/2020	Violation Source:	CERS
Violation Program:	HMRRP	Violation Division:	Orange County Environmental Health
Citation:	HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2		
Violation Notes:			

Returned to compliance on 11/30/2020. OBSERVATION: The business failed to electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA on or before the annual due date. CORRECTIVE ACTION: Electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA within 30 days. On an ongoing basis, electronically submit and certify the business plan annually on or before the annual due date. The facility completed and submitted a HMBP this date and the violation has been corrected.

Violation Description:

Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

Evaluations

Violations

Violation Date:	04/02/2019	Violation Source:	CERS
Violation Program:	UST	Violation Division:	Orange County Environmental Health
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)		
Violation Notes:			

Returned to compliance on 04/17/2019. The DO inspection reports on site did not have an owner operator signature for November 2018 through March 2019. Please make sure to sign the section VI of the DO inspection report addressing the issues identified in sections III and V of the report.

Violation Description:

For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violations

Violation Date: 04/02/2019 **Violation Source:** CERS
Violation Program: UST **Violation Division:** Orange County Environmental Health
Citation: 23 CCR 16 2715(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(f)
Violation Notes:

Returned to compliance on 04/17/2019. The monitoring system certification had not been completed every 12 months. Please complete the leak detection equipment testing immediately by a qualified service technician to avoid further enforcement actions.

Violation Description:

Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).

Violations

Violation Date: 03/16/2018 **Violation Source:** CERS
Violation Program: UST **Violation Division:** Orange County Environmental Health
Citation: 23 CCR 16 2715(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(i)
Violation Notes:

Returned to compliance on 03/16/2018. The monitoring system was last certified on March 14, 2017. Testing was completed today March, 16, 2018. This violation is abated.

Violation Description:

Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).

Violations

Violation Date: 04/15/2020 **Violation Source:** CERS
Violation Program: UST **Violation Division:** Orange County Environmental Health
Citation: 23 CCR 16 2644.1(a)(4) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2644.1(a)(4)
Violation Notes:

Returned to compliance on 04/15/2020. Observation: The facility failed to notify this agency it will be conducting the annual monitoring system certification 48 hours in advance. Corrective Action: Please be sure to inform this agency in writing through the USTnotifications inbox prior to conducting an annual monitoring certification. This violation has been corrected during this inspection.

Violation Description:

Failure to notify the UPA 48 hours prior to testing.

Violations

Violation Date: 03/16/2018 **Violation Source:** CERS

Email report to: gpficke@ezigroup.com On site for routine UST inspection, monitoring system certification, and spill bucket testing. The facility has four double-walled tanks (87, 89, 91, D) monitored by a Veeder Root TLS-350 system. The site has double-walled pressurized piping with electronic line leak detectors. Positive shutdown and fail safe programming were verified. Flapper valves are used for overflow prevention. Testing was conducted by Ross Raicu of American Tank Testing. Tester certifications (VR, ICC, VMI) were verified. Please submit the test reports to this Agency within 30 days. Secondary containment testing was last conducted on October 18, 2016. It must be tested every 36 months. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Orange County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

On site to conduct a routine UST inspection along with a plan check inspection at this facility. The facility has four double-walled tanks (87, 89, 91, D) monitored by a Veeder Root TLS-350R system. Positive shutdown and fail safe programming were verified during the testing by the UST technician. The site has double-walled pressurized piping with electronic line leak detectors, and were tested and functional. The annular sensors, sump sensors, fill sensors and UDC alarmed and shut down respective turbines when submerged in water for all tanks. The spill buckets were visually tested for one hour and they all passed for the four tanks. Violation I382 for secondary containment testing has been corrected and is now closed. The tanks and UDCs were tested using INCON and they all passed the testing for the failed components from the SB 989 testing. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

On site to do a follow-up inspection for the tanks and spill bucket testing. The facility has five tanks 87, 89, 91, Used Oil and Diesel monitored by a Veeder Root system. Flapper valves are used for overfill. The overfill test reports are not available for review, cannot confirm testing. Violation I101 for overfill is still open and outstanding. The annular sensors, sump sensors, fill sensors alarmed and shut down respective turbines when submerged in water for all tanks. The UDC Mag VR sensors had to dipped in fuel to alarm the system and they shut down the sumps. Violation I205 for annual certification of leak detection equipment has been corrected and is now closed. The spill buckets were visually tested for one hour and they all passed. Testing was conducted by Dave Lopez with Clean Air Testing. The Designated Operator reports for March 2019 was present on site and was signed by the UST operator, violation I106 has been corrected and is now [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

On site to conduct a routine hazardous waste inspection. Consent to enter, inspect and take any necessary photos was given by the Manager, Gus Ficke. There was no hazardous waste containers on-site during the inspection. Manifests were available and were reviewed, and the last waste pickup was on 3/5/2017. Walked the perimeter of the site, and there were no hazardous waste spills observed. Weekly inspections are performed by the Manager Gus Ficke. Checked the dumpster in the back of the store and there was no hazardous waste observed during this inspection. Necessary Emergency Response information was posted on-site near the cash register. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

INSPECTOR COMMENTS: On-site for a routine inspection. Met with Gus Fricke the General manager for the facility and Razvan Raicu of American Tank Testing and witnessed portions of the annual monitoring testing. The certificates of Mr. Raicu were reviewed. The sumps and UDCs were open and inspected. A small amount of water was seen in the used oil tank sump. This water was removed by American Tank Testing. The compliance binder and E SUBmit was reviewed. The updated Financial Responsibility documents were on-site and have been uploaded to E Submit. The DO training (08/17/15) and inspections are up to date. The last secondary containment testing was done on 01/08/2014 Current UST permit is on-site. Discussed

SITE HISTORY:

The site, part of an oil field property. The property consisted historically of sumps, containment areas, wells, pipelines. The District completed a Phase I and Phase II report for the site in 1995. A Remedial action Plan was conducted under the oversight of the Orange County Health Care Agency in 1999. DTSC reviewed site information and recommended preparation of a PEA in 2000. Thereafter, the district decided not to proceed with this project.

Site History:

The site, part of an oil field property. The property consisted historically of sumps, containment areas, wells, pipelines. The District completed a Phase I and Phase II report for the site in 1995. A Remedial action Plan was conducted under the oversight of the Orange County Health Care Agency in 1999. DTSC reviewed site information and recommended preparation of a PEA in 2000. Thereafter, the district decided not to proceed with this project.

Site History:

The Department of Toxic Substances Control (DTSC) has reviewed the Notice of Investigation Results for Crown Cleaners (Report) (Genesis Engineering & Redevelopment [Genesis], June 9, 2017) located at 1263 East Imperial Highway, Placentia, California (Site). The Report was submitted in response to DTSC's directive to investigate the full nature and extent of chemical releases emanating from the Site.

The Site is located within the Imperial Plaza Shopping Center at the intersection of Imperial Highway and North Rose Drive. Newly constructed homes are located along the eastern perimeter of the shopping center and adjacent to the Site, and another residential community is located to the north. Dry cleaning operations using tetrachloroethylene (PCE) began at the Site in 1979 and continue to be used as a cleaning solvent.

Environmental investigation conducted in 2012 and 2015 of the neighboring property located at 3811 Prospect Avenue, Yorba Linda, and the exterior portion of the Site revealed concentrations of PCE in soil gas above screening levels up to 13,000 micrograms per Liter (Response Plan, Yorba Linda Lots November 2015). The PCE plume extends onto the neighboring residential properties and poses a potential risk to the occupants of those properties due to vapor intrusion to indoor air.

On October 13, 2015, DTSC sent a letter to Mr. Young Jun Kim, the property owner at that time, noting that a release of PCE occurred at the Site, and requesting him to enter into a Voluntary Cleanup Agreement (VCA) with DTSC to properly characterize and cleanup the Site. On January 11, 2016 DTSC received an email response from Rondell Homes, a representative for Mr. Kim, declining DTSC's request to enter into a VCA.

DTSC was contacted by representatives from Hunsucker Goodstein PC, legal counsel for Mr. Kim. Genesis Engineering & Redevelopment (Genesis)

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

and DTSC participated in a conference call on May 11, 2017 to discuss the scope of work of the investigation, and the submission of a draft workplan. DTSC concluded that the proposed investigation workplan was inadequate and advised on the recommended soil vapor sampling locations. On May 17, 2017 DTSC emailed a figure with the preferred soil vapor sampling locations. DTSC's recommendations were not incorporated into the workplan and were not implemented in the field. DTSC did not approve the workplan

Genesis' Report presented the results of the investigation which revealed detections of Tetrachloroethene ("PCE") in all 8 samples and the duplicates at concentrations ranging from 720 micrograms per cubic meter ("µg/m3") to 2,300 µg/m3, with 5 detections at or above the commercial screening level of 2,000 µg/m3, as well as the residential screening level of 0.48 µg/m3. Other constituents such as Trichloroethylene (TCE), cis-1,2-dichloroethene, and trans-1,2 dichloroethene were also detected. DTSC has determined that a release has occurred at the Site, however the nature and extent of contamination has not been defined.

DTSC has incurred oversight cost charges in the amount of \$5,533.88 which are now due and owing. A copy of the invoice is enclosed with this letter. As the property owner, you are a Responsible Party pursuant to Health and Safety Code section 25323.5 and liable for the oversight costs associated with this Site. Failure to pay the invoice will result in a lien being placed on the Site. In addition, the Site will be placed in the "Inactive-Action Required" category in Envirostor until the Site is fully investigated and cleaned.
